Thread: [What programs should i get for Linux Mint](#)[EDIT: Instead of Ubuntu im getting Linux Mint]

kitkin15 - June 27, 2010, 4:46 pm

Ok im looking for programs for Linux Mint. I decided to go with that instead of Ubuntu because of its size lol. I want to know what i should get for it, i want MacChanger and Aircrack-ng for it, but i dont know what kind to get.

[URL=<http://www.aircrack-ng.org/doku.php?id=downloads>]Aircrack-ng][URL]

And i cant find one for MacChanger.

They have many downloads, what ones are best for Linux Mint?

Sorry if this seems stupid, but im a 102% noob to Linux lol.

Thanks =)

-Kitkin15

EDIT:

I changed from Ubuntu to Linux Mint

kitkin15 - June 27, 2010, 6:34 pm

Does it matter what type i get?

I see that some people have viewed and not replied, so im guessing it dont matter what kind i get....

Please let me know =)

Dan08 - June 28, 2010, 12:51 am

Use mint package manager, go to search and type macchanger and install it. I recommend you install aircrack from source because version 1.X isnt available on linux package managers yet, its not very complicated thou. Install ettercap, wireshark, sslstrip, conky, crossover games, armyops (American's Army for linux), etc

kitkin15 - June 30, 2010, 3:29 pm

Ok, one question about crossovergames. Will that allow me to play games that are less popular? (GLEST, Cleric Kings, ETC....) Because those are the only games i really play lol. If so then i will try to download the torrent in 2 days (Im camping right now and dont have that great of a signal lol)

Xdem0 - June 30, 2010, 5:46 pm

Glest has a native linux port....

```
$ sudo aptitude install glest
```

??

Joseph Ducreux - June 30, 2010, 7:55 pm

Aircrack

kismet

airolib-ng

macchanger

wireshark

ettercap

truecrypt & easycrypt

Ropeney - June 30, 2010, 9:15 pm

```
Code #!/bin/bash      //This guide assumes your wireless card is wlan0
ifconfig wlan0 down    //Brings your wireless card down
echo "Type in the MAC adress you wish to be spoofed too (6 Char sets): "
read mac
ifconfig wlan0 hw ether $mac    //Changes your MAC to the one typed in
ifconfig wlan0 up              //Brings Your Wireless card back up
service NetworkManager restart    //Change name to your network manager, restarting it can
solve some conflicts
Change wlan0 to the device you are using. Change NetworkManager to whatever service you are
using.
```

By the way!

Ubuntu and Mint is both debian based!

well ubuntu is debian based and mint is ubuntu based..

so programs is same for those like for windows xp sp 2 and sp 3

I thought so, but i wasnt sure. Im a noob to Linux so i wanted to make sure lol.

Will CrossOverGames work with 100% of Windows games??
