Please buy this product manually from me. Send me either a PM or add me on Skype: [weco.sell](#)

At first, I was a bit skeptical when I saw the [simple looking Login-Screen](#), but after registering and redeeming my serial, I was greeted by the [sleek and professional GUI](#). Not only does Drop Domination have the ability to use Command Line Parameters, but also various other functions that will help you spreading, such as a [Fake Error Message](#) that will be shown upon execution, as well as an efficient Execution-Delay! Let's be honest, this is Java, big stubs right? Wrong! After compiling my payload, I was shocked, the stub-size is only 14kb!

This is a great opportunity to maximize your spreading-results, especially given the fact this is cross-compatible on various operating systems.

Big vouch for Weco and Drop Domination! ?
