Thread: [\[Royalty\] Coding help desk](#)

Remix - November 27, 2015, 9:02 am

Loyal and Royal

This help desk will be run by skilled individuals to provide quality help. We are here to help everybody with nearly every coding related question.

Some of our members are specialized in most of major languages and gained a lot of experience in this topic.

We will try to describe as good as possible what's the problem, how it works and optionally we will add sources which will help you to understand it.

If you have any questions, problems or errors related to coding feel free to post your question below.

One of our team will try to response as good as possible.

Balding - November 27, 2015, 9:02 am

Explain to me what a palindrome is please, don't google it either.

Remix - November 27, 2015, 9:04 am

(Nov 27, 2015 10:02 AM)Bald. Wrote: [\[CITE\]](#) Explain to me what a palindrome is please, don't google it either.

Not really coding related but it's a word which is the same doesn't matter if spelled forward or backward.

Do geese see god?

DuguWudi - November 27, 2015, 9:39 am

Regarding coding this bot for this thread below

<https://hackforums.net/showthread.php?tid=5070250>

Whats the main problem I would encounter?

Image recognition?

Gameguard/hackshield?

Thank you.

How is it not coding related? If anything it has a lot to do with coding.

Remix - November 27, 2015, 9:40 am

(Nov 27, 2015 10:40 AM)Bald. Wrote: [\[CITE\]](#) How is it not coding related?
It's more common language related

Balding - November 27, 2015, 9:42 am

(Nov 27, 2015 10:40 AM)Remix Wrote: [\[CITE\]](#) It's more common language related
Yeah, I know, but it still applies to coding in a lot of ways.

Remix - November 27, 2015, 9:45 am

Image recognition?
Gameguard/hackshield?

Thank you.
I don't know the development for that game but I wouldn't write such bots in autoit.
I don't know either many about autoit itself.

Aurora - November 27, 2015, 9:46 am

Should this little fella { be on the same line or be given a new line. What's the "proper" way or does it come down to preferences?

Example:

```
Code if (you.hasAnswer()) {
    you.postAnswer();
} else {
    you.doSomething();
}
or
Code if (you.hasAnswer())
{
    you.postAnswer();
}
else
{
    you.doSomething();
}
```

}
```

```
}  
or  
Code if (you.hasAnswer())  
{  
    you.postAnswer();  
}  
else  
{  
    you.doSomething();  
}
```

It doesn't really matter, it's more of a preference. But it's similar to the white space concept; you don't have to do it, but it's just how everyone else does it and it makes your code a lot cleaner. ?

Balding - November 27, 2015, 9:47 am

Code if (you.hasAnswer())  
{  
    you.postAnswer();  
}  
else  
{  
    you.doSomething();  
}
```

It's all preference. The placement doesn't matter in this case.

{  
    you.doSomething();  
}
```

It depends on preference and sometimes on the language.

While it's actually the standard to write the { in the same line in Java you are kinda forced to write it in the next line in C# (Visual Studio does it automatically).

But in the end it's personal preference.

But in the end it's personal preference.

Tools -> Options -> Text Editor -> C# -> Formatting -> New Line, you can choose which line to put it on.

stackoverflowin - November 27, 2015, 11:40 am

Remix does know what he's talking about. Hopefully I can get into Royalty soon also!

funtela - November 27, 2015, 1:17 pm

Do you recommend Codeacademy.com to get me started?

Remix - November 27, 2015, 1:20 pm

(Nov 27, 2015 02:17 PM)RYAN REYNOLDS ? Wrote: [\[CITE\]](#) Do you recommend Codeacademy.com to get me started?

Depends on the language you want to learn.

But actually there are better sources.

Nearly every language has its own documentation.

The docs would be the best source.

But it's alright if it's used for the very basics as an entry into coding.

screams - November 27, 2015, 1:27 pm

If I wanna get into VB coding where should I start?

Remix - November 27, 2015, 1:52 pm

(Nov 27, 2015 02:27 PM)Ghost ? Wrote: [\[CITE\]](#) If I wanna get into VB coding where should I start?

Odus released a guide about it: [here](#)

It should give you a good entry into VB.net
