Yup, rip scans produce about 100 actually different servers now (if you scan 500) so an unfiltered list gets a Lot of dupes.

Also, using 800 threads, wtf.

yeah but 800 threads is very unrealistic and unnecessary.

you shouldn't be trying to push 800 threads js.

if your server and host are allowing it, assuming you're using contabo, i still couldn't think you'd get any better results than a lower number.

could i be wrong, certainly, im just discussing
