Thread: [Tynychat Cam bot stopps working in 10 seconds while I attack \[by Gaben\] Pls Help](#)

SecurityN - November 28, 2015, 1:47 pm

Since I don't know how to prevent this bans from tynychat

This belongs to this thread..

hackforums.net/showthread.php?tid=5004041

When I open this exploit and I choose one room for start the attack, I have just waited the 8 or 9 threads join delay and afterwards I set the intelligent mode and then I turned on the spam on the room so what happened in the next, I got auto banned in 10 seconds and the bots stopped broadcasting from the room but they are still on the room and the current IP is Permanently banned.

So this means his exploit is patched and I paid and none worked.

Please help me how to prevent this, I can pay you if you have another special cam bot for Tynychat.

Even with a vpn still stopps working after 10 seconds

?TOP KEK - November 28, 2015, 3:01 pm

It wasn't patched when it was sold to you, and I will figure out what the new packet flooding threshold is and conform the cambot to meet it. I don't know what you thought would happen by posting this on hackforums though, you seem like an idiot.

?rost - November 28, 2015, 3:16 pm

As posted in the original thread, the bot is updated shortly after tiny chat makes an attempt to prevent it. If you can't wait for updates, you're better off not buying something like this. Have patience when it comes to figuring out what a needed to bypass these things.

SecurityN - November 28, 2015, 3:51 pm

Better you update this today or even tomorrow I have just purchased the exploit for let me kill the rooms and then I got the exploit without having this fixed and working, cant even take down any room because tynychat prevent this automatically and i am not an idiot, sounds you are ignoring me but let me know if your exploit will work in the next update without having this auto-ban which is totally enough for exploit be patched.

Also The Re-captchas when I start more than 8 threads I will get 2 captchas not only 1 though and Gaben mentioned me only 1.

I hope this gets updated as soon as possible.

?rost - November 28, 2015, 7:11 pm

(Nov 28, 2015 04:51 PM)SecurityN Wrote: [\[CITE\]](#) Better you update this today or even tomorrow I have just purchased the exploit for let me kill the rooms and then I got the exploit without having this fixed and working, cant even take down any room because tynychat prevent this automatically and i am not an idiot, sounds you are ignoring me but let me know if your exploit will work in the next update without having this auto-ban which is totally enough for exploit be patched.

<https://puu.sh/ICp6b.jpg>

First of all, learn to read the ToS when buying something. Do not demand or expect updates to be done on your time. We both have full time jobs and this is something we do for fun. The updates will come when we're free, and figure out the issues at hand. Secondly, Stop bitching about what Gaben tells you. Just because he says something DOES NOT MEAN Tinychat isn't going to change it. God forbid you spend the extra 10 seconds doing a second captcha.

SecurityN - November 28, 2015, 7:43 pm

I PAID FOR KILL ANY ROOM AND TINYCHAT BANS THE IPS AFTER 10 SECONDS DAMN IT DOE, SORRY

?TOP KEK - November 28, 2015, 9:13 pm

I'm suspending your license for breaching our terms of service, sorry!

hackit1 - November 29, 2015, 1:53 am

So if you send too many packets in a certain amount of time, they ban you. So They are blocking Packets Per Second.

It's Tinychat banning too many packets from a single IP in too short of a timespan.

i,m sure they will be able to fix the cam bot

you will have to put up with the Re-captchas thats just the way it is.

I think you should have sent a PM to The DEVELOPER first

as i'm sure they are aware of the change to the packets

SecurityN - November 29, 2015, 3:25 am

(Nov 28, 2015 10:13 PM)?lordgaben Wrote: [\[CITE\]](#) I'm suspending your license for breaching our terms of service, sorry!

I am not disrespecting or trash sales your service and now you are saying u will suspend my account dude the point is I purchased the exploit for kill all rooms.

Would you say me when u will update this ?

?roost - November 29, 2015, 7:41 pm

The constant spam on skype for issues that are not our problem is a big breach of our ToS. We reserve the right to refuse, deny, and suspend people for any such reason, though we do not abuse that right. Your constant complaining about our bot IP banning you and demanding I help you get a new VPN, on top of asking for me to make you pro is excessive and abusive to our customer service accounts.

Furthermore.

<https://puu.sh/IDJ5z.png>

Spamming my skype while I'm at work is not how to get me to help you with your issues.

SecurityN - November 29, 2015, 10:04 pm

Dude you did not understand, I am having issues with your exploit since I can still use a bunch of VPNS and trying to prevent this auto-ban after 10 seconds when I change once again and start the attack this will be keep happened, your exploit just won't bypass any room while broadcasting for about 10 seconds and then those bots will be stopped after 10-15 seconds because the IP is banned from any room.

When bots stops broadcasting after 10 seconds

In only a few weeks time we earned around \$1000 USD from all of our products combined. I understand that you are probably still recovering from the fact that tinychat essentially put an end to your HTTP-Tunnel Connect method of using proxies, but don't be a fool. Don't be a fool.

You have been able to make that much money only because people aren't aware of the fact that the cam bots are absolutely useless and i repeat *useless*. Let me remind you of something not even a single major thing you did on your own. You're the one who is a fool infact i will ask one of the hf admins for permission to post private messages and that should put you in place kid period

You believe that because I asked for a second set of eyes on something I could have simply verified myself using rtmp traffic decoding in wireshark (if my IP wasnt banned at the time) that you have any kind of leverage or deserve any kind of credit? You better be trolling.

Secondly, by posting our conversation you would only expose yourself as an insecure underhanded scumbag. I had just returned to tinychat after a two year hiatus so I was friendly with you since you were the only other "programmer" i knew, and you let your ego get the better of you after you figured out that I was a lot smarter than you ever thought possible, and that is unfortunate.

I'll post the conversation myself when I get home, you are literally grasping at straws. The only thing you did was save me the 24 hours of waiting for my static IP to change.

hackit1 - November 30, 2015, 6:29 am

OMG LOL ? [Let the Battle Begin] ?

sniper_x3 - November 30, 2015, 6:39 am

Keep coming up with excuses like "Oh no my static IP was banned that's why I couldn't do shit on my own". Keep that excuse for someone who is new on tinychat or your butt buddies other than that whole tinychat knows you're nothing but a joke.

Secondly, the one person who would get exposed would be a two faced moron aka YOU. You said you came back on tc (2014) after a 2 yr break I was the only programmer you knew which doesn't actually make sense because in 2012 I wasn't even coding anything major let alone tinychat stuff. Come up with something else to defend yourself. LMFAOOOO "lot smarter" than me are you fucking day dreaming son ? You couldn't even get your bot to connect to tinychat you were blaming BroccoliProducts.Media.Net4xAny library . Do you even fucking remember that ? . Keep using a fucking rtmp client to do 90% of your work. I do have ego and you know why there is hardly anyone on tc who matches my level or smarter than me example of such human beings are Notorious, Nola and his female buddy Megaloler (there are few more which I can't recall mainly because they don't come on tc anymore). Get Rekt queer

Keep coming up with lame excuses such as your IP was banned. Come on kid you have a fucking VPN.

I have already messaged an admin. Just going to wait for his response before posting further.

You sound like a belligerent 15 year old on Xbox live. I will address every line in your post when I am back from work -- and I can promise that this will not end well for you. Your posts are essentially

doing the work for me at this point. I can sadly say that I expected a more intelligible post from you, since your reputation precedes you, but instead you exposed yourself as a complete dope.

I hope for your own sake that you are bringing more to the table than the fact that I asked you to perform a basic task in Wireshark as a favor, since no, you can not decrypt that type of data while connected to a VPN, a simple fact that someone as "skilled" as you claim should know already.

I resolved the situation by employing Windows servers to handle the various Wireshark tasks that I needed to perform on a day to day basis for the development of my products.

?rost - November 30, 2015, 10:19 am

The fact that we made money off a free chat speaks wonders for itself. Anyone with any type of knowledge in how people work knows people will pay for something to put them above the rest. Why pay 5 dollars constantly for a top promo spot. When you can pay 20 to force people to your room. In the end, we won. In this world, money is king and speaks all languages.

SecurityN - November 30, 2015, 11:03 am

Guys Let's stop this argument seriously, this thread is not for arguing, only for update/fix the exploit, the problem is that I made this thread because Gaben won't reply me on skype for days, remember I am not stupid for not get any messages, fucking useless too.

Even you Gaben mentioned me I can shutdown any room except "fuckthehaterr" or "weturnup" and then Exploit is patched (He also said the exploit wasn't patched before I purchase WTF, this makes me mad asf = scammer.) because I can't even shutdown any room full and you said it isn't patched omg..

In my Opinion I've purchased 20\$ without having it work and a warn which the exploit was patched about a week ago and Gaben didn't said me that at least he should update this quickly if he knows how to avoid this new Anti-Cam (Auto Ban Ip) Bot from Tinychat.

OakIsKass - November 30, 2015, 11:06 am

fuck the others.. lordgaben best coder

You're a fucking moron

first of all, Run Your VPN on your host > fire up wireshark > Magic. You can't really see the traffic otherwise or if you wanted you could have bought a vps and ran wireshark over it you could pay \$25 to fix your bots but couldnt even afford a VPS back then ? Are you kidding me ? .Even let's just say i was completely wrong about capturing the traffic while being on a VPN. It still doesn't make a difference, even you know it that you're lying about this whole "IP banned" thing just to cover up your exposed ass infront of your lil fan following and aye im not the one making money off someone's else knowledge so keep your hormones in check. So before you start acting like you're some shit on tinychat ask yourself did you implement anything big on your OWN in your bots like any of your bots ? i doubt. Even that captcha bypass was handed over to you by nola since he is way too generous you only converted it from python to c# I am waiting for Omni's response regarding a back up of all my past pms. Since it's against the rules to post pms in this section consider yourself lucky.

Just stopped by yet again to say that yet again you wrote a wall of text filled to the ceiling with bullshit allegations. Feel free to explain in what way a bypass was "handed over by Nola"? Pretty sure that took a whole three minutes of Fiddler, but yeah man -- you caught me! Meanwhile, I know you were very happy to implement that free bypass handed out by Nola.

Even with the new tinychat serversided account system - I reversed it within the hour and posted how the whole system works and provided people an almost copy and pastable fix in my Skype group. What excuse do you have for not fixing that in your own programs? Was there not a YouTube visual basic tutorial readily available to teach you how to reverse this and implement a fix?

If anything, today you have demonstrated plenty of ways that is actually you that played both sides and became two faced. Not to anybody's surprise - we knew you were trashing us behind our backs, for no reason other than that you were upset that your name wasn't on our cambot or something because you were "generous enough" to hand out "your knowledge", i.e. all PUBLIC and readily available information. <http://www.adobe.com/devnet/rtmp.html>

You are a terrible human being to say the least, a total fucking backwards scumbag, you are literally cancer to the programming community. I admit I was a fool indeed to believe at one point that we were friends, but hey - not everybody can sit back and watch as somebody that actually knows what they are talking about shows up to take their place.

P.S. You are still wrong about that VPN claim, being stubborn doesn't defy physics and the TCP/IP protocol. You don't have a seat at the big-boy table because you are a complete lowly egotistical moron who copies everything Notorious does, and you lack basic skills and knowledge about programming or remedial networking such as this and you think nobody will call you out for your incompetence. And now we all patiently await your next brain cancer inducing reply, type it well this time, okay?

Wait, how did you put it so eloquently earlier? Oh, right.

"rekt nerd" - ahbishek 2015 (aka 15 year old Indian Muslim guy)
Yo Mr LordGaben aka Tyler from Florida tell us about the solve media captcha ? How did you implement it ?

You Mad ?
You Mad ?
You Mad ?

No Mr.Skid I was always skeptical about helping you for some reason i had no trust on you and Yes you proved me right when you said "I don't plan to build a cam bot and even if i do i wont use it or release to a soul". Aye im pretty sure i saw it on your thread sales :/
Guess what who is two faced ?
Answer: Obviously You

Quote:Even with the new tinychat serversided account system - I reversed it within the hour and posted how the whole system works and provided people an almost copy and pastable fix in my Skype group. What excuse do you have for not fixing that in your own programs? Was there not a YouTube visual basic tutorial readily available to teach you how to reverse this and implement a fix? And what lead you to the assumption that i didn't do it ?

Keep that attitude in check because it doesn't suit someone who would blame a whole rtmp client library for the coder's aka yours inability to implement something.
:/

Quote:If anything, today you have demonstrated plenty of ways that is actually you that played both sides and became two faced. Not to anybody's surprise - we knew you were trashing us behind our backs, for no reason other than that you were upset that your name wasn't on our cambot or something because you were "generous enough" to hand out "your knowledge", i.e. all PUBLIC and readily available information. <http://www.adobe.com/devnet/rtmp.html>

Yes my knowledge aka research. You gain knowledge by studying things which obviously you aren't capable of doing. If you were actually smart instead of coming out with silly excuses just to cover up your ass, you would have admitted that you are literally wrong about everything you have said until now. It's unfortunate that you have turned into something which only cares about money in the end whether it is morally right or wrong.

Quote:You are a terrible human being to say the least, a total fucking backwards scumbag, you are literally cancer to the programming community. I admit I was a fool indeed to believe at one point that we were friends, but hey - not everybody can sit back and watch as somebody that actually knows what they are talking about shows up to take their place.

Terrible human being to say the least ? You must be talking about yourself right ? Of course

Nah you're the two faced one keep reading and i will prove you wrong *again*.
Yes, i wasn't really ok with someone skidding off my work just to make some cash. Actually i wasn't expecting someone to go down to that level to make some money on a community forum. I considered you a friend till you didn't break my trust but once you proved me about it. I ended it.

Im cancer to programming community yet

1) You didn't code anything major.

Solve-Media Bypass = Nola

Making Bots Broadcast = Me

Am i missing out anything ?

Please lemme know

2) You are using a RTMP Client Library to do 90% of work for you.

3) When exposed, you came out with silly excuses.

4) You're shipping 10+ .dlls aka external library

5) You were asking your customers to download .Net Framework 4.6.

Now who is the real cancer to the programming community ?

Answer: Obviously You

Quote:P.S. You are still wrong about that VPN claim, being stubborn doesn't defy physics and the TPC/IP protocol. You don't have a seat at the big-boy table because you are a complete lowly egotistical moron who copies everything Notorious does, and you lack basic skills and knowledge

Hey! While you're at it, feel free to "expose" more people who dare ask you for free, public information they could have just found with a simple google search:

http://www.images.adobe.com/content/dam/Adobe/en/devnet/rtmp/pdf/rtmp_specification_1.0.pdf

Edit: I already saw the screenshot you are using and it doesn't incriminate me at all, in fact it backs my argument and I come off as a friendly dude -- which I am. You might actually be the dumbest person alive.

Chill out kid i take my own time to respond cuz i ain't in any rush.

Darkode - November 30, 2015, 11:55 pm

Is it autistic season ? why all the hate guys ? This is Catz by the way.

?TOP KEK - December 1, 2015, 12:12 am

I am actually embarrassed for you. I asked you to post your next cancerous reply, and you definitely do not disappoint. I find that it's almost beneath me to even give your posts the time of day.

Let me break this down again for for you, since you seem to conduct yourself like a typical League of Legends casual, and you can't read and/or you simply ignored important sentences of my post.

Quote:Yo Mr LordGaben aka Tyler from Florida

Oh boy! You've doxed me! Oh wait, that is just a convenient and lousy comeback you stole from Government.

Quote:tell us about the solve media captcha ? How did you implement it ?

Tinychat's Solve Media Captcha bypasses are simple because it's widely known that there are only 16 possible answers. You can build a checksum of the audio files associated with the captcha's question. Check the captcha's question against your database of questions (or a dict of a

hash:answer) and submit it. This is how captchas were bypassed when captchas were brand new technology. I don't know why you think Nola invented this method when this is customary and has been in practice for years to handle vulnerable captchas.

Quote:And what lead you to the assumption that i didn't do it ?

Keep that attitude in check.

Because you didn't do it, and you sound like a contender on "housewives of orange county". Get your shit together.

Quote:Yes my knowledge aka research. If you were actually smart instead of coming out with silly excuses just to cover up your ass, you would have admitted that you are literally wrong about everything you have said until now.

A total disaster of a paragraph and thus associated trolling attempt. I haven't been wrong even once. Not that you have the intellectual capacity or skill to make that call in the first place.

Quote:Yes, i wasn't really ok with someone skidding off my work

<http://www.adobe.com/devnet/rtmp.html>

We can all read the official RTMP protocol specifications, the same as you or anybody else. What do did wasn't special or profound, you are claiming 100% total credit for being on the scene and figuring out how to use a simple rtmp function. In the technical world, publishing a broadcast is not much different than sending a chat message to the server.

Quote:You are using a RTMP Client Library to do 90% of work for you.

Yeah and so do you, jackass. You fraud. If you bring this up again, I'm going to post your stolen RTMPLIB wrapper that you robbed from some poor soul's github and stole credit for writing it for everyone to see. You might have added one class to it of your own or someone else's work. I honestly don't even think you can code at all.

The broccoli products library is far superior, a stable, tried and tested networking solution, it saved months of being plagued by bug testing and time consuming network reversing. Something I definitely wasn't going to invest time in, given the financial trouble tinychat is currently facing.

Quote:When exposed, you came out with silly excuses.

Correct me if I am wrong, but I don't see you exposing anything and I'm not seeing any excuses from our camp.

Quote:You're shipping 10+ .dlls aka external library
xulrunner/GeckoFX/Firefox browser (mobile) is shipped with it for cosmetic reasons, a smooth recaptcha solving experience.

Quote:You were asking your customers to download .Net Framework 4.6
Says the guy "programming" in visual basic.

Grasping at straws hard right here. There aren't any good reasons not to use .net 4.6, I like the new C# features, and I don't like being stuck in the stone age like you are. But we don't expect much else from you, considering you are from an impoverished Third-World country.

Quote: Chill out kid i take my own time to respond cuz i ain't in any rush.
Yeah because Google translate probably takes a lot longer to load all the way from India.

Quote: I ain't even a muslim

Nice try, but we both know you are. You used to talk about it in sensual singles while I was a regular. If you've suddenly had a change of faith, cool story!

Quote: Making Bots Broadcast = Me

Pretty sure Notorious was the first to actually get it working, way back in 2011. But we already know from the aforementioned posts and your confession below that you are comfortable with stealing ideas and code, and you think it's perfectly okay when you do it.

Quote: i said in my previous post even if i was wrong about the vpn thingy it still doesn't make a difference

How convenient. You were completely fucking wrong, big league, but hey, nobody saw that! Hypocrisy at it's finest.

Quote: You can't come at me just because i copy UI.

So you admit to copying and pasting other people's work (for real) and we should give you a pass? Isn't that the very reason you started this beef with me in the first place? You are a fucking disgrace to the Hackforums programming community and the Tinchat community.

Quote: IF YOU THINK YOU'RE SOME SHIT ON TINYCHAT OH BOY, YOU INDEED NEED A REALITY CHECK.

What a fucking snooze-fest.

This vulnerability exist in old Solve Media Captcha implementation. I think it has already been fixed by Solve Media in one of the later updates.

But anyone who has been on tinychat and codes could easily tell that you basically used nola's solve media bypass. I can't confirm whether he himself gave it to you or someone who had his spam bot passed it to you.

Keep staying in denial.

Quote:Because you didn't do it, and you sound like a contender on "housewives of orange county". Get your shit together.

You're extremely dumb. I asked before what lead you to that conclusion ? Pls respond.

In the technical world, publishing a broadcast is not much different than sending a chat message to the server.

You have been wrong since beginning period

1) You were basically incompetent of doing anything in first place. So you cried on HF for help (OH YES RTMP SPECIFICATION DIDNT EXIST BACK THEN.....SARCASM)

2) After being overwhelmed by help you went on to say things like "i owe you my life" in pm's.

3)You said you weren't planning on making a "cam bot" and even if you did you won't use it or release it to a soul.

PLEASE TELL ME YOU ALREADY HAVEN'T DONE THAT

4) After another couple of months you couldn't get your bot to connect to Tinychat Do you all want to know why ? Because tinychat altered their connection method by appending a time stamp to the connect message. This so called smart ass Mr. Gaben couldn't even figure that out he ended up

blaming it on rtmp client. He was offering \$25 to whoever fixes it (OH YES RTMP SPECIFICATION DIDNT EXIST BACK THEN.....SARCASM)

5) Again after a gap of few months he went nuts or crazy i dont know how to put it but he forgot all the things he said to me in pms including all the ass kissing he did.

6) He started selling his bots excluding CAM BOT or anything which involved broadcasting (sarcasm)

7) Now look at his attitude and arrogance.

8) He is saying now all of a sudden RTMP Specification exists which he could have read.
FACEPALM

Quote:Yeah and so do you, jackass. You fraud. If you bring this up again, I'm going to post your stolen RTMPLIB wrapper that you robbed from some poor soul's github and stole credit for writing it for everyone to see. 1) Since i already stated that you're dumb im going to further prove it
hold on

<https://hackforums.net/showthread.php?tid=4805302&pid=45996507#pid45996507>

2) There is no RTMP library for vb6 yet i have released several bots on HF further proves you wrong.

Anyone who has known me over these years especially since 2014 could easily vouch for me. We don't need your opinion keep it with yourself.

Quote:Correct me if I am wrong, but I don't see you exposing anything and I'm not seeing any excuses from our camp.

You must be blind to not see that :/

Quote:Grasping at straws hard right here. There aren't any good reasons not to use .net 4.6, I like the new C# features, and I don't like being stuck in the stone age like you are. But we don't expect much else from you, considering you are from an impoverished Third-World country.

You like new .net features nothing wrong with that but when you have to write commercial programs you have to consider compatibility idiot. As of now .net framework comes preinstalled on Win 10 systems and its available for download on previous windows via windows update.

All these abstractions provided by the .net framework has made you totally useless.

Quote:Yeah because Google translate probably takes a lot longer to load all the way from India.
Nope

Quote:Nice try, but we both know you are. You used to talk about it in sensual singles while I was a regular. If you've suddenly had a change of faith, cool story!

Someone told me you're delusional i didn't believe him oh well i do now.

Quote:How convenient. You were completely fucking wrong, big league, but hey, nobody saw that! Hypocrisy at it's finest.

Instead of trying to avoid the actual content just face it.

Quote:So you admit to copying and pasting other people's work (for real) and we should give you a pass? Isn't that the very reason you started this beef with me in the first place? You are fucking disgrace to the Hackforums programming community and the Tynychat community.

Define Copy & Pasting period.[/code]

(Dec 1, 2015 12:55 AM)Darkode Wrote: [\[CITE\]](#) Is it autistic season ? why all the hate guys ? This is Catz by the way.

Meow..... I should have exposed him long time ago. Im actually trying not to hate but just stating facts.

nolapola - December 1, 2015, 2:41 am

And this is why i stopped developing anything for Tynychat, was tired of feeling like i was in the wild wild west over a silly failing website. I hope this stops soon for everyones sakes. :/

?TOP KEK - December 1, 2015, 4:41 am

He is just repeating himself in every post and ignoring the body of the questions asked, plus, his reputation has been permanently tarnished by his own self destruction in this thread. I could have kept silent and still "won". Now he's desperately trying to bury our earlier posts that incriminate him by pumping out walls of text plagued by broken English. He wants to look like he had the last word.

Ahbishek is a clown. Refer to my previous posts in this thread if you want to watch ahbishek get manhandled and rolled hard.

Finally, Tyler from Florida got nothing to say so resorts to come at me by saying that i have a broken english.

He has been getting owned until now over and over again. Yet he is not taking any lessons from it. Also,

You should see a psychiatrist i can tell you are suffering from some serious mental disorders.

anonym0us12 - December 1, 2015, 1:33 pm

those who bought cam bots and other types of bots didnt listen to me when i said: dont even try to buy or sell bots because on december lot changes are gonna come out especially for the cambots..

by the way colors are getting back in few days or within 10 days
only fools buy such bots as cambots.!

We almost there guys... lets count december days rofl

?rost - December 1, 2015, 2:32 pm

Tiny chat made contact with us and removed our room from the normal servers. So I'd say what happened was more than enough to get their attention. With that said, it's a simple patch to fix the bot. Literally fine-tuning the broadcasts per second. I will respond more when I leave work.

Also, fuckthismincharacters

HI CATZ

OG-SB - December 1, 2015, 3:21 pm

So this means Gaben's CamBot exploit is patched for now and people are still buying.

Also, fuckthismincharacters

HI CATZYou guys are not getting it, dont you? and no you guys didnt brought the attention of tinychat developers or whatever you wanna call it, the main reason was because of the peruvian guy that lives in zwitterland.. Most Known as manuel by the way his real name is not manuel obviously... and tinychat worked with another company that i cant even mention in here.. to monitored his ass... so thats how they patched all cam bots and some other exploits based on manuel's and abhishek's cambot way before they were working on that and because of manuel and abhishek they came out with the recaptcha thing aswell but i bet no one knew about the Real story behind that shitty drama... how do i know? simply because i have a friend of mine that works with tinychat, thats all im gonna say.!

and even if the authors of the cambots try to fix it, it will never work as increasing the speed of camming up or uncammig is pointless they put restriction in the cam packets so basically it will be speedless.

and here is where i warned most of sellers and customers month ago:

<https://hackforums.net/showthread.php?tid=5021410>

TechWhizZ199 - December 2, 2015, 5:20 pm

All I say to this is..wow..

And hey guys, I'm back here just to see what is going on on HackForums.

?rost - December 4, 2015, 1:04 am

The bot will be updated. Don't you worry. :)

OG-SB - December 4, 2015, 8:31 am

(Dec 4, 2015 02:04 AM)?rost Wrote: [\[CITE\]](#) The bot will be updated. Don't you worry. :)
And When dude??

TechWhizZ199 - December 4, 2015, 4:36 pm

(Dec 4, 2015 02:04 AM)?rost Wrote: [\[CITE\]](#) The bot will be updated. Don't you worry. :) Lol, Truth. Just consoling these guys since they are desperate to get their hands on a cambot again to 'kill' rooms..

OG-SB - December 5, 2015, 4:13 am

Seems this will not be updated for this month or even a week because i purchased, lets see if Gaben do the update quickly.

nolapola - December 5, 2015, 6:15 am

Guys here is a guide on how to ask for a release ETA from a developer.

1. Don't ask for ETA.
2. Check rule one.

If there is something that you want RIGHT NOW I suggest you open up Google and learn how to program yourself. It really isn't that hard with effort and persistence.

Until then, kindly shut the fuck up.
That is all.

OG-SB - December 5, 2015, 9:06 am

Also this new update should kill all rooms which are already protected.

TechWhizZ199 - December 5, 2015, 2:14 pm

(Dec 5, 2015 10:06 AM)OGSkypeBanner Wrote: [\[CITE\]](#) Also this new update should kill all rooms which are already protected.

Please stop asking for recommendation on what to add into the new update. Either you ask nicely, rather than stating what you want, or you don't post. As nola said don't just rely on these people to make things to your desire, since that only comes with time and generally being nice to the developer and supporting him works.

Thanks,
Tech

OG-SB - December 7, 2015, 6:58 am

Seems the update will not be finish, this should be done now

argybargy - December 7, 2015, 6:08 pm

(Dec 7, 2015 07:58 AM)OGSkypeBanner Wrote: [\[CITE\]](#) Seems the update will not be finish, this should be done now
you're really stupid, and rude... you should learn patience.

?rost - December 8, 2015, 2:32 am

First of all, People pay to be blacklisted. So there form no. We are not letting it kill protected rooms. Gaben and I both own rooms, why would we give the bot the power to cambot our own rooms? Secondly, I actually checked the paypal for the date you claimed to have bought the bot. It seems the last payment we received was refunded.

<https://puu.sh/INLUa.png>

Therefor I ask that you shut the fuck up and stop begging for something you're not going to recieve, since you were issued a refund. I appologize to those that have followed this thread and all the cancer it's given. Proof above for him being refunded, we will no longer be commenting on this situation.

?MrRoot - December 8, 2015, 2:35 pm

(Dec 8, 2015 03:33 PM)OGSkypeBanner Wrote: [\[CITE\]](#) Stop lying I never lied to any people, I did not refund my money, why are you trying hard, your exploit is patched so I made this thread because I am your customer and you should at least update this exploit in a few days not even in the next year, This is Wack in my opinion, stop lying that I have refunded my money via Bitcoin.

If you don't give me a refund I will use my powers too to take action on your whole accounts, so stay tuned

As I mentioned this is extremely useless, when an exploit is patched after a week, Gaben should stop the sales as receiving \$ because this is considered a scam, people will try it as me and they have no idea if the bot got patched after a week or not, and none of this providers said to me before,

don't worry i will take care of you both this month if you will not give my money back.

Stop threatening members and repostin your posts to bump. Double violation, stop before YOUR HF acc gets banned by a mod.

OG-SB - December 8, 2015, 2:35 pm

Thanks for the confession on the multi-account issue, and enjoy your ban for threatening to "take care" of us.

Since I am the only developer and since I do this as a hobby, the development and sales of the Tynychat products have been on halt due to the fact that I've been moving to my new house over the previous week or two. It will resume when my rig is back in commission. Don't like it? Don't care - all of the products still work.

Also, a tldr: Assume you were an architect who built a house. Abhishek is the guy who installs the windows and wants credit for designing and building the whole rest of the house when he did no such thing. Not sure why anybody is interested in the first place, the customers of my cambot destroyed Tynychat and it is beyond dead at this point.

sniper_x3 - December 8, 2015, 10:56 pm

This is the correct way to put it.

tldr: Person A took some help from Person B. "B" was not aware that "A" was going to make money off it so he helped him, "B" only offers help for personal projects . Somewhat about 3-4 months later "A" started selling his stuff including the primary attraction regarding which he took help. Later, when "A" got confronted, he started making some silly and irrelevant excuses.

By the way Your exploit isn't updated for long weeks and this is so fucking ridiculous, I am sorry but seems you have no idea how to avoid this new anti cam bot on tynychat, keep threatening me please, this is the proof how this people are really scammers as this concern.

You you really are this stupid, not an act, or anything like that, you're just literally mentally retarded, arent you? rofl.

Yeah, I can read. Obviously a lot better than you ever will. Let's see what I found!

(Dec 8, 2015 03:35 PM)OGSkypeBanner Wrote: [\[CITE\]](#) I made this thread because I am your customer and you should at least update this exploit in a few days not even in the next year

Uh-oh! You made an oopsie! Probably should have thought twice about what you were actually saying in your post. Bravo.

Then we have this little gem:

(Dec 8, 2015 03:35 PM)OGSkypeBanner Wrote: [\[CITE\]](#) If you don't give me a refund I will use my powers too to take action on your whole accounts, so stay tuned

don't worry i will take care of you both this month if you will not give my money back.

Yeah - no, you won't do anything to our accounts, we're quite safe from you here. Everything works as intended from the Room helper or the adbot, to the cambot.

If Tinychat bans you for cambotting them (I.E. conducting a type of denial of service attack against them) that is your own problem.

You imbecile.

OG-SB - December 10, 2015, 6:36 am

Why the fuck I paid your exploit since this wont bypass the anti cambot, you are the scammer dude. At least say something how to avoid this Auto-Bans, I will tell you why I made this thread, this user want me make this thread because he was ignoring me on skype, so he want speak more about this in this thread, so yea it is fault, I would not recommend to buy this service for now.

patrioticmarcot - December 10, 2015, 6:42 am

lordgaben isnt able to bypass the new tinychat protection otherwise he would have already.

when you by something like this you must keep in mind that the target website will probably fix it real fast

even tho it took them a year to do so it was bound to happen

you were refunded so you have no reason to complain

OG-SB - December 10, 2015, 9:02 am

They did not refund me, you need to read the whole thread sir, they used something like inspect element for make it fake, they are surely scammers.

I have several reasons each argument.

This is the transaction payment I gave to them

<https://btc.blockr.io/tx/info/e42fac70e2e0607b427f2096ade4edbda53132089eea2f99b3a8046a70e2a9fe>

And this user mentioned that I have refunded on PayPal and I bought the service via Bitcoin.

lol tynychat is so weak. they are borderline mongolius at this point.

TechWhizZ199 - December 11, 2015, 6:48 pm

When Gaben is ready to update and distribute the update he will say.

OG-SB - December 27, 2015, 6:15 pm

Lmao see guys he cant update his exploit i told you this people cant even bypass new protection now.

?roost - December 28, 2015, 4:22 am

I just used the cambot to hit a room offline. But I have a different version than you do that allows me to change how fast they cam up and down. Feel free to keep crying though.

OG-SB - December 28, 2015, 8:23 am

I PAID 20\$ FOR NOTHING GIVE MY MONEY BACK THEN, I DONT SUPPORT SCAMMERS OR GIVE AN UPDATE AND I REMOVE WHAT I SAID.

Edit: Another proof this people are scamming, he also mentioned us that he is using another version guys, keep it real.

?roost - December 28, 2015, 3:45 pm

First of all, it's not scamming. You have the most updated version of the bot. I do not. But being a part of Royal Syndicate, I'm open to obtaining every update of the bot from day 1. Secondly, Prove you've never gotten a refund. Provide me the paypal email, name, and transaction ID.

OG-SB - December 28, 2015, 5:38 pm

I Paid this shit by a fucking BTC

<https://btc.blockr.io/tx/info/e42fac70e2e0607b427f2096ade4edbdba53132089eea2f99b3a8046a70e2a>

[9fe](#)

SCAMMERS Fuck this.

TechWhizZ199 - December 28, 2015, 6:35 pm

There is a better exploit around which disconnects room apparently.

OG-SB - December 28, 2015, 6:51 pm

Tell me the current exploit I will pay for sure, I just take the OVH down but i want one exploit without doing this things.

?roost - December 29, 2015, 1:34 pm

Far as I know we have not done any bit coin says in the last 2 months, but I only accept PayPal so io can't help ya.

OG-SB - December 29, 2015, 1:58 pm

I spoke with Gaben about this I said him for buy with PayPal Goods and service and he wont accept then I said him for purchase with BTC and I did paid him, why u trying hard ?

?roost - December 29, 2015, 4:05 pm

Pretty sure you're full of shit, since the original payment was claimed to be done via paypal. Either way, with your -94 rep, I will not be giving you a refund without hard proof you never received one.

OG-SB - December 29, 2015, 6:20 pm

Stop lying u peace of shit, STOP SCAMMING MY MONEY but anyway i will wait for this new version and lol, Tinchat is working on this new exploits, too late for this time.

?roost - December 29, 2015, 7:28 pm

evil1here4you - January 1, 2016, 12:19 pm

Good Morning and Happy new year

i absolutly love the bots and how much fun it was when it worked

i know you guys are working to update it and i had a few questions & sugestions

#1

on the cam bot is there any way to put pictures in a folder and label them

1,2,3,4,5 ect and when we run the bot in the room as the bot cams up could it even for a fraction of a second show the picture and cycle threw the pics

same with SKYNET when i am mod in my room and use it to protect the room

is there a way to get the bot to run a loop or stream a picture or Gif while i have it cammed up think that would be very cool

#2 i sure you guys are hard at work

but a readme or how to for all the settings

or instructions on best suggested way to maximize the power of the bot

for instance when you did the AWESOME Demo you showed me a glitch in the flash that allowed you to put 50 to 100 cams on in the room at once

ive yet to figure that out i would use delay join disabled guests cambot stacked name change and on the bottom of the box to swarm i set to max of 10 then i load 1 or start one bot do the captcha let it join wait then try to get 4 5 in there then hit start and watch it do its work the most i have seen is 6 7 bots cam up before they are able to catch me with a ban

was awesome and a good time

but nothing close to what you did in the demo

is that a differant setting or option

im not sure how u did it but im dieing to know

i noticed there is a enable message option but no message.txt to set my message is that still being worked on or am i not seeing it

#3 is there a way to add on a option to target individual users and resolve there ip and direct the bots power on to him instead of the entire room

i used to have a tinychat resolver but it no longer works

and tracert is hit or miss

i go to one room and the owner is a idiot and thinks he is untouchable

and instead of killing the entire room maybe be able to do something to knock that person offline for a second or what not ;)

#4 a user online message invite option for other bot owners who are active to be invited to my room or his room to be able to hit the target as a team to get max effect would be a great option think if 3 4 bot owners hit a room at once LMFAO could even have a invisible mode so any user can have the option to get invites or messages or not

i just had wondered if any of these ideas or Questions can be touched on

hope everyone had a fun newyears and didnt get to hammered

wish you all a healthy and happy and successful new year
and look forward to the bot being updated and seeing whats new as it grows
keep up the great work and i look forward to chatting with ya

The first would be a great idea and it is already possible to send an image or flv encoded through

the tinychat rtmp stream as gaben will tell you (I have seen Koss do it). The second is nearly a must, just as an additional for users. The third however is practically not possible unless you can figure out a way of getting ips from server-side. The fourth can be implemented but then it is a workload in terms of managing a database and serving requests for each account in it.

Happy new year to you too!

Tech

?rost - January 1, 2016, 6:25 pm

What he said for #3^ You can't resolve IPs, and even if you had a way of getting server side, it'd be a lump of IPs with no names or information. As for the cam stacking, that was simply back when 10 threads were still usable, and us using our private servers and personal computers to up the number of bots into a room. 50 bots would be 50 literal connections to that room. Since most people are stupid, they didn't realize that 50 users in their room magically appearing were mostly bots. They were just happy their room was "filling". As for hitting someone offline, give him an IP grab link and DoS him. /shrug

evil1here4you - April 10, 2018, 3:56 am

Even tho this post was a long time ago i must respond and say thank you for the responses and insight

the new tinychat layout for beta sucks balls and entire site format lately sucks ass
the server is getting attacked left and right
most connections are knocked off or not stable
i know they changed the format and dont use flash and the rtmp no more
from what ive been told how do you guys like it

i see a good 90 percent of the rooms have some kind of room bot or something thats room control i like

but i know from being around bunch of trolls and also trolling here and there myself
ive heard people were able to still get peoples ips while in a room
still unsure how or what method they use ive heard some people using cmd
some people using wireshark and some using browser console
what ever way there is id love to learn more about it and figure out how its done
like your ipgrab link idea too thanks

so to me i think the best and most kick ass user friendly bots are that ive seen or used
even tho most are outdated or patched
was the Gaben ones even tho

i really really loved the skynet room bot and how when i ran it had functionality very sad its no longer working
is there any plans for a new one or update or anything else out that is close to it beside these python scripted roombots?
sucks to pay for bots that only work so long and dont keep getting updated or worked on
is there any cambots out or script codes or bots like cambot out there ?

any spambots and if so what do you think is the best one

i know there is some spambots out that work off of python but nothing like Gabens versions

or anything like skynet out there or a code you can direct me to it
id love to see how it was made and with help of a few good friends try to update and or get
something close to it working again

i truly enjoy learning and testing new exploits and bouncing ideas off each other to use to addon to
existing or make a new programs

i thank you again frost and guys for everything and hope to hear back from ya soon
maybe you can hit me up again on skype and bounce some ideas i got off each other please lmk
frost ?
