Thread: [LegacyLink dead?](#)

Elitis - November 29, 2015, 4:53 am

Hey guys

Did anyone here also buy LinkedLegacy? I bought it a few months backs because it had built in FUD, but its been months now since an update and skype support is gone..

Im also not sure if it is still FUD lol

rezzex - November 29, 2015, 6:19 am

No, it was replaced with Prototype, which is programmed in C++.

I think that you get a Discount when you have LegacyLink.

JaGLY - November 29, 2015, 7:56 am

Yep you should contact the owner directly about this ?

?Syria - November 29, 2015, 9:27 am

I had this RAT and its complete sh*t and no it wasn't replaced with prototype

Elitis - November 29, 2015, 9:33 am

wow thats so shit i bought it and like literally 2 months later it was no longer FUD when I had a lifetime license..

?Syria - November 29, 2015, 11:24 am

They used a free crypter to advertise it as "FUD"

Elitis - November 29, 2015, 3:06 pm

wow wtf before i bought it they told me how they updated their crypter weekly and how the rat auto updated and it was FUD! What a load of bullshit it seems.

Root - November 29, 2015, 3:31 pm

Well RIP LinkedLegacy That is why I made my own RAT.

Elitis - November 30, 2015, 1:51 am

They arent even replying to my PM's no more :/

Incendiary. - November 30, 2015, 1:56 am

The owners are spastics money whores who are not even active in the RATs section.

They own 2 RATs, neither of which are good.

Kappa-chan - November 30, 2015, 4:00 am

Yep RIP money to everyone who bought it

Elitis - November 30, 2015, 4:30 am

I literally only paid \$50 cos the owner assured me it would be FUD and I would come with like ATLEAST a 2 year guarantee... its been less than a year and its all fucked

JaGLY - November 30, 2015, 4:32 am

And now they will move on with a new rat promise the same and like that it will go over and over ?

Elitis - November 30, 2015, 4:51 am

wow now I wish I had purchased IM4 or NANO Core back then, literally only bought legacylink because they kept saying how it would always be FUD but all was bullshit

nenadv - December 20, 2015, 10:58 am

but does the rat still works or not? i know it isn't fud, but i hope it works normally

?Syria - December 20, 2015, 11:04 am

They used a free crypter and the rat is old

rvlt - December 20, 2015, 11:49 am

I made the mistake of buying it when I was very inexperienced to RAtIng. The screenshots looked good so I thought it was good. Turned out to be the biggest mistake of my life - almost every feature had noticeable bugs or didn't work, and the program never even got out of beta before it was abandoned.
