Thread: [Java for web development.](#)

Armagedon - November 29, 2015, 5:30 am

Ok guys i might sound a little stupid here but i need to make sure of this.

I am doing a complete course for web development on Udemey (warez disallowed) at the moment, i am nearly finished but as you can imagen all in one courses doesn't cover everything for each section.

So my plan is to get a course for each section for example; a course that just teaches HTML and CSS, a course that just teaches PHP etc..

I am just searching on java at the moment, but i cannot find anything for 'Java Webdevelopment' but what i find is 'Learn java' courses.

The question here is; The programing language 'Java' does it have different sections to learn for an individual purpose or the whole 'Java' language is used in the 'same' way on web development, web applications and programs?

I am talking about the script code we use on html. I can leave the web application for later on.

why do you want to use java in web development ?? java is only used for servlets , learn php if you want to do real web development and try this channel: <https://www.youtube.com/user/thenewboston>

this is far better than Udemey (warez disallowed) & free :)

If you want to go to web development i will suggest you Html-> Css-> Bootstrap-> JavaScript-> jQuery -> Angularjs -> Node js

And for databases MongoDB

I am on JavaScript at the moment and i am trying to get really good foundations in JS because JQuery angular and node are based on JavaScript .. If you need something you can ask me on PM i will help

Well just done some research aswell ;

[https://blog.Udemy \(warez disallowed\).com/jquery-vs-javascript/](https://blog.Udemy (warez disallowed).com/jquery-vs-javascript/)

Looks like javascript is a base to everything, but the thing is i can't find any javascript courses =/

Best tutorial about javascript is on codeschool , belive me i was trying to understand JS on youtube tutorials and all that but with no success , and when i go to codeschool and go in courses i really understand it , if you dont have previous programming exp with codeschool you can easy be very good in JS , jQuery Ajax and JSON for one month if you practice 2-3 hours a day .. But you have to pay

U got all courses ? and what courses you got ?

If you don't understand it on codeschool i don't think that you will understand it anywhere else :S

Yeah bro i got around 20x courses from the sale. Na Udemy (warez disallowed) is more on detail

and its more of video not written and its got open discussions so its much more helpful.
