Thread: [Stresser: Any CF 5sec bypass Stresser out there ?](#)

rhinos - November 29, 2015, 5:32 pm

Hi all, do you know any Stresser that can bypass the CF 5sec protection
There are not many L7 with this option out there ?

I noticed some of them did have it but retracted it and kept only XMLRPC
Anyone still have it and is fully operational ?

rhinos - December 2, 2015, 2:11 pm

No reference of them at all ?

rhinos - December 4, 2015, 2:02 pm

From what i see at the forum some of them are :
webstresser
rawlayer

i don't know if there are any others

?Anubis - December 4, 2015, 2:48 pm

It's impossible bypass cloudflare unless the server is misconfigured.

rhinos - December 4, 2015, 2:51 pm

I believe the javascript protection can be bypassed by a massive http flood
However i can't find stressers that do this thing (apart from these two i mentioned)

nope

rhinos - December 4, 2015, 3:39 pm

OK thanks for your opinion
Is there a stresser out there with this option ?

<http://webresolver.nl/cloudflare>

After that just DDOS the real IP. But as I said, this won't work unless the DNS is misconfigured.

rhinos - December 6, 2015, 10:21 am

I do understand that L4 attacks are easier and stronger but L7 and especially CFbypass works for sites under the free plan of CF. I saw it working that's why i ask for it

Not true, bypasses do exist, and the server doesn't need to be misconfigured.

Some are easy to patch manually, others are not.

Most stressers that have CF-Bypass aren't good for it tbh, I'd recommend a DDoS service.

There are not too many offering CF-bypass

That's why i try to gather them in one list

So far i know the two are mentioned at the top

Give me a example.

I mean, bypass cf IP... get the real IP.

PLT ? - December 6, 2015, 2:17 pm

(Dec 6, 2015 01:31 PM)AnubisCore Wrote: [\[CITE\]](#) I mean, bypass cf IP... get the real IP.Plenty of ways exist, here's just one of them:

Scanning the internet for a certain title header and return a list of IP's that respond successfully.

E,g "YouTube" "Google" "Hack Forums"

People used to do it to HF all the time, the solution is to return a 403 forbidden error or drop packets completely if a user is trying to directly access the servers IP address rather than through a domain.

Sure, it's not really "bypassing CF" as such, but it's still relevant.

rhinos - December 6, 2015, 2:59 pm

Thanks both of you for your participation

Since i can't post to the relevant section of the forum (due to my few posts so far) is there any other stresser that use efficiently the CF-bypass method ?

Franz Hopper - *October 28, 2018, 2:59 am*

Downed.xyz have Cloudflare and Blazingfast bypass
