Thread: [Port Forwarding In Windows Server 2012?](#)

Spyloterror - November 30, 2015, 1:04 am

ok so i got a rdp a few days ago it is running windows server 12 i need to port forward port 1337 to it. i added a rule in windows firewall (tcp) in both incoming and outgoing rules. whenever i goto canyouseeme it says the port is closed. so how do i forward a port on a rdp?

Laer? i do not understand that...

Wireless Network - November 30, 2015, 1:22 am

I'm not sure how to portforward on rdp but i know that sometimes 'canyouseeme' site can't see open port if your service is not running. I guess you're using RAT, so try listening on that port and check again

leader

Spyloterror - November 30, 2015, 2:01 am

explain how you lead me? also how do you even know me, howd we meet?

BITW - December 1, 2015, 4:17 am

If you already opened the port, Then kindly, Stop listening port checking sites. They often provides/shows wrong info and i know this well. Just use the port with your desired applications and see if there is any error message.

Best wishes.
