Thread: [25+ Android Hacking App that will turn your phone into a Hacking Device](#)

priyanka11 - December 3, 2015, 2:10 am

Cellphone is now very common these days and it has changed the way of bi-directional communication. There are many operating system for mobile devices available but the most common and the best operating system for mobile is Android, it is an OS means you can install other applications on it. In Android application usually called apps or android apps.

[img]http://blacklisthackers.com/wp-content/uploads/2015/11/android-hacking-apps-1.jpg[/img]

1) [Fing](#):

Fing is a probably best used app for port scanning on a network. It gives a list of services, names, spoof Mac address and much more.

2) [DroidSheep](#):

Droidsheep is a MITM (Man In The Middle) spoof that grabs NON ssl (https,443) cookies of facebook, twitter, etc. accounts and will open there session right on your phone (for all you kittens out there looking to hack facebook, this is as close and easy as it will get)

3) SpoofApp:

Here is an app that spies at heart could use – SpoofApp. It allows you to use a fake Caller ID – a number that you are free to specify yourself, in order to protect your privacy or to pull a prank on someone. Sounds like fun, doesn't it? Well, Apple didn't think so, which is why it never allowed the app to enter its App Store. Google, however, didn't mind, which is why SpoofApp was available on the Android Market for about two and a half years. However, it was banned from there last year as it allegedly was in conflict with The Truth in Caller ID Act of 2009. This can be useful in social engineering.

4) [WifiKill](#):

WifiKill is in our handy handbook. You can read all about it. By the way its not ddosing in anyway. Its a MITM attack that redirects the users connection back to there localhost (127.0.0.1)

5) Network Spoofer:

Network Spoofer is just an amazing app. It will allow you to do MANY ARP, MITM, attacks. It has options like redirecting traffic on a network to any site you want. Change images on the network, custom YouTube Videos, List goes on and on. Defiantly a app worth checking out.

6) [Andosid](#):

AnDOSid is the application which is used for DOS attacks from Android mobile phones.

7) ConnectBot

ConnectBot is an exceptionally well done SSH/Telnet client, which also acts as a terminal emulator for the local Linux sub-system. While there are better terminal emulators (though not for free), there is no question that ConnectBot is the absolute best SSH client available for Android.

8) Exploitdb:

We all should know what Exploit-db is.. if not well its a website (<http://www.exploit-db.com/>) that gives us a whole boat load of exploits to run in metasploit, etc. all it will do is update us on the new exploit available to take over the world.

Remaining you can get from the link below:

ze-slade - December 3, 2015, 9:24 am

Even though this is Copy pasta, thank's for the share.

dayaramgodara93 - March 14, 2016, 10:10 am

Thanx dude this is really valuable

Sh4rk Seny - March 15, 2016, 10:37 am

Copy Pasta hahahaha, yeah Thanks for sharing!

Anaerobics - March 16, 2016, 7:31 am

Thanks for sharing, going to download a couple of these!

TheX182 - March 17, 2016, 4:16 am

Thanks man. Great share. Send you a pm want to ask you something.

sendinggraz - March 17, 2016, 5:27 am

Thanks man. Great share,going to download a couple of these!

xCoded - March 27, 2016, 4:55 pm

Thanks for these, some I haven't heard of.

The Pulp Fiction - March 28, 2016, 12:00 pm

Haven't thought of it really , anyway thanks for the post. Will surely try some of them .

Grave. - March 29, 2016, 12:17 am

All old shit
rather get kali linux

temp_mr. fantastic - March 29, 2016, 1:10 am

nice info thanks for share

AndreaEbbasta - April 2, 2016, 5:54 am

Add DSplot best tool for hacking

priyanka11 - April 2, 2016, 7:53 am

Thanks for sharing knowledge with us mate

.Monarch. - April 2, 2016, 9:01 am

Nice collection thanks for sharing.

anything for WIFI cracking?

x.sporkbomb.x - June 1, 2016, 11:21 pm

really good shit, impressed

e?erg1zer - June 4, 2016, 9:04 am

Why is it okay for people to copy paste stuff word for word? (I'll give you props for citing it though, at least you didn't try to pass it off as yours)

On a separate note, although I didn't check the website. zANTI2 is a great resource as well. It combines the features of a few of the apps you mentioned into one, and is also still being updated. On top of that, I'd also suggest visiting routerpwn.com for router-specific exploits.

priyanka11 - June 4, 2016, 8:47 pm

Your welcome

umm there's lot more in wifi cracking- you can guess any by taking down description

+1

I use zANTI2 from time to time, and I must say, it's pretty fucking useful for MITM attacks. You can use it with any dSploit to inject some fun exploits.

Thanks i have updated my list :)

sukilo - June 5, 2016, 4:43 pm

Thanks man. Going to download a couple of these!

VIRUSunknown - June 5, 2016, 10:19 pm

Yeah these are great thank you so much!

priyanka11 - June 5, 2016, 11:53 pm

Your welcome mates. hope you share it ;-)

CloudyTM - June 7, 2016, 9:43 am

Thanks for the share, been searching for something like this for a long time!

nullphreak - June 17, 2016, 11:49 pm

Another tool I would like to add is CSplit (Continued from DSploit development ever since they went over to ZAnti)

Viam Inveniemus - June 18, 2016, 1:41 pm

Very nice list! Been using a few of these for awhile.

priyanka11 - June 19, 2016, 1:18 pm

(Continued from DSploit development ever since they went over to ZAnti)

Are you aware of CSexploit guide-how they are useful in hacking session and all that stuff

BenG - October 31, 2023, 6:27 am

Thanks mate, so helpful! Good information to discover!!!
