Your browser seems to freeze up when you try to scrape large amounts of usernames.

As for the comparison, our Instagram scraper has more features. You can scrape by tag,

username, or even by a specific post.

You can also scrape endless amount of usernames by our scrape by random tags feature. It generates random tags automatically and scrapes usernames from those tags.

1MPERATOR - March 25, 2016, 6:44 am

Thread title is misleading, if you use this program to scrape from a post you get like 100-200 usernames even when there are 27.000 likes or even more. I tried this program out since my own scraper was disabled for some time but I would not recommend to buy this scraper if you want to scrape from one post. It probably does work if you fill in a big amount of posts / accounts. If you

prefer to scrape from a hashtag, there are enough good functional websites out there which provides this for free.

And second, I do not know why but my pc, as well for my laptop, became fkd up slow when opening this program. Even though it's a very small program, which shouldn't give any troubles.

This scraper scrapes usernames from the comments of posts. Instagram only allows you to view the most recent comments which is about the ~150 range. Thus, this is something we cannot bypass. The title is not misleading as you can literally scrape thousands in a matter of seconds using the random tag feature.

hello, is it possible if you can update the instagram scraper, it will be better if instagram scraper can scrape the LATEST FOLLOWERS of x username.

i tried to scrape using the bot but its not scraping the latest people that followed x username, its liek scraping random people from the followers of x username it will be better if it scrapes the latest followers of x username, hope you fix it. thanks.

- the software is not scraping people if the person doesnt have so much followers
- the software only scraped 10 people from a user with 400+ followers
- the software is not scraping people using photos. etc

the software is Not Working completely

pls fix else, give a refund because i just bought it today, thanks.

- the software is not scraping people if the person doesnt have so much followers
- the software only scraped 10 people from a user with 400+ followers
- the software is not scraping people using photos. etc

the software is Not Working completely

pls fix else, give a refund because i just bought it today, thanks.

It does not scrape by the amount of followers a user has. It scrapes the usernames from the comments of the posts that the specific user has. You also cannot scrape all the comments since Instagram doesn't allow this. You can only scrape the most recent comments.

We will add a method where it can scrape the followers that a specific user has soon.

In all, it is working how it is supposed to be.

For some of them, there's limitations such as how many results that you can pull from Instagram
since Instagram has a limit on how many results it allows the people to see.

There are a lot of dupes, only 24 out of 4801 weren't dupes.

The tool needs an update I reckon
