Thread: [\[How TO\] Set up Gaudox HTTP Bot](#)

jar1 - December 6, 2015, 2:28 pm

This tutorial is about Gaudox's botnet setup with XAMPP.

1: Download Gaudox HTTP Bot.

Link: <https://hackforums.net/showthread.php?tid=5022902>

Link (Last Version):

<https://hackforums.net/showthread.php?tid=5022902&pid=48772180#pid48772180>

2: Extract the files somewhere to your computer.

3: Open localhost/phpmyadmin and create a new database. Example:

Spoiler [\(Click to View\)](#)

4: Create a folder at C:\xampp\htdocs\ and copy the panel inside.

5: Open the builder and create a stub like this: Disable AV now cause the stub will be detected.

Spoiler [\(Click to View\)](#)

Spoiler [\(Click to View\)](#)

Gau is my htdocs folder that panel is stored.

Spoiler [\(Click to View\)](#)

Spoiler [\(Click to View\)](#)

6: Open with browser localhost/panel (Mine is localhost/gau) and set up the panel with Keys from Profile 1 in builder.

Spoiler [\(Click to View\)](#)

7: When everything is done delete setup.php and go to login.php

Login to panel and run the stub that we created earlier.

Hit a refresh or " Set Options " after 2 minutes in panel and see the results.

thanks for posting this, although the installation is very simple, there are always people sending me PMs, you just saved a lot of my time answering simple questions.

jar1 - December 6, 2015, 3:12 pm

Yes i found the install pretty simple. This is for everyone facing issues.

shabbu.shah - December 7, 2015, 10:12 pm

It works perfectly in localhost !!

but when i try it on free web hosting the bot is not showing ??

believe me, the package is working even in free host, I tried it in paid and free hosting, other members also tried it so check out the setting in your server or builder.

jar1 - December 8, 2015, 10:01 am

Check your Entry paths. Some users dont understand what's the correct paths.

You need to learn spread methods. Warez and Torrents for example.

A lot of webhost block bot nets so it might be that. Use an vps to host a website.

SH4D0WS_ - February 8, 2016, 7:54 am

When I go to setup.php and fill in everything it says:
Connecting...
could not find driver

What do I have to do?

What do I have to do? what version of PHP are you using? use latest one or 5.4 at least. Looks like PDO module is not installed.

Make sure you have a clean copy.

Modz pop - April 13, 2016, 5:14 pm

can you send me this? it says the project is closed

Panatkorn - April 19, 2016, 5:26 pm

I need the download link as well please.

DoubleTrouble - June 18, 2016, 12:22 pm

@Hostah

Hi boss, I hope u will see this message, cause I can't sent you a PM yet. It seems like I can't get a clean copy of this bot. Could you be so nice to provide me download link with legitimate copy? I couldn't say how much I would appreciate that. Cheers brothers!

Chillw0rm - June 18, 2016, 2:12 pm

Does the IP of MySQL host for setup.php always need to be localhost or should it be ip of the vps?

btw Dubtrub here's downlawd k:

okay they are all broken is not working, fix the images okay

N00T - October 9, 2017, 2:00 am

Why should anybody even use this botnet? It has just basic features, and is completly public to everybody

Leonfluf - October 29, 2017, 3:46 am

Ok i was able to set erverything up but when it comes to build the stub thereis a problem.

When i try to add an entry to send to it says ivalid length.

So now i dont know where the problem is.

Regrats,
Leonfluf
