Thread: [Recommend me free working keylogger & RATs](#)

**yinyung21** - December 8, 2015, 2:22 am

Hi, I am a broke mechanical engineer. Passed Bachelors and now on a full-time job that pays \$300 per month. Also, I am a total noob when it comes to hacking or exploiting. Currently reading tuts on HF to get a grasp on these.

I can't afford a paid logger, rat or crypter, at least not now. I am aiming to start with free tools to get some outputs and then hopefully will be able to buy some great stuff available on HF.

1. Can you guys recommend me free logger, RAT, vps, vpn, fud crypters & binders which are good for starting and still working (win 7/8.1/10 preferably)? Where to get them?

2. I have a shared IP with no access to router. So, options are limited for me (I guess)

3. If someone would be kind enough to show me ways by which I can make some money that would be highly appreciated. As I don't have any money to buy working ebooks on money making and I don't know which free ones are legit. Therefore, I am asking your help.

[I am total noob and broke, please be kind while criticizing]

Thanks in advance

**yinyung21** - December 10, 2015, 5:59 am

No reply... I wonder why....

**Mr. Robot** - December 10, 2015, 6:07 am

Darkcomet is a free RAT

You will never find a free crypter that will stay fud more than 24 hours.

Free vpn you can use vpnbook or just google one lol

Don't buy a single ebook on here.

Cheers.

There's is a bunch of that stuff maybe not fud crypters but 1/35 antiviruses. You can not demand all these things at once. If you search around hack forums you should find all of that stuff. It's not hard

**Sheeple** - December 10, 2015, 7:19 pm

None of the shit you described is free. You have to invest money in order to get stuff. And no offense, but being a Mechanical Engineer you should be making quite a decent amount of money, considering my brother and father were in this field and they were making around 70k yearly. (USD) But your financial status is none of my business.

For a decent paid vpn go with RA4W vpn it's cheapest 1 month plan is like 3\$ and it allows portforwarding so you don't have to mess with your router.

For a decent R.A.T go with nJrat, Babylon or Quasar, all are free and pretty decent. I use a mix up of Babylon and nJrat and get slaves on both for maximum capabilities.

For a cheap crypter, almost any on this forums will do that are in the stickied section, but you can find free crypters here that are under 5/50 detection. Which isn't bad for free. But paying will ultimately maximize your potential in gaining slaves.

For money making, get a job lmao you're a mechanical engineer? Shouldn't be hard, engineers are in high demand.

Unless you're lying and you're 12, then gl

And you're making 300\$ a month? Where do you live, that's highly illegal lmao, you're basically a slave, that's 42\$ a day, 7 days a week, or 5\$ an hour basically working 8 hours a day or 7.5\$ hourly at 5 days a week.

**JustSomeN00B** - December 10, 2015, 7:23 pm

RAT: DarkComet, Babylon, njRAT

VPS: None

VPN: None that support port forwarding (port forwarding is required for RAT's)

Crypter: None

Binder: Celesty (comes with DarkComet)

**Insane Developer** - December 11, 2015, 12:23 am

Keylogger: Try Dracula, then when you get money try the one in my sig, AutoLog. It is the best keylogger ever

**yinyung21** - December 11, 2015, 3:52 am

Thanks all for your replies. I am stuck with shared IP.

Currently trying dc, njrat & babylon in LAN. these will not work without fud crypter. Will try with free ones. Also what do you think about metasploit? veil? or powershell injection algorithm provided by these.

Do you happen to know something(free) that will bind 2 executable files into one. let's say one is some\_driver.exe which will run in front and another batch/ executable will run behind?

at 5 days a week.

I appreciate your honest opinion. I studied mechanical engineering thinking the same. I am not lying brother. Ever heard of the country Bangladesh. Here I am working a 12hrs/day job, 26 days/ month and no other vacation except 2 Eid with \$300/ month.

If you could help me get a better paying job that'd be great daydreaming

As you said it's none of your business. That's cool too.

This thread got dropped. Again.

**Quaszaryx** - December 12, 2015, 9:22 pm

DarkComet is my free RAT go to. Very reliable, I recommend it.

**yinyung21** - December 13, 2015, 12:49 am

This thing.... it's free and FUD.

[FREE] Insanity+ Crypter v1.0.8 [Stable] [32/64bit] [Windows 10 Compatible]

[Scanned on nodistribute.com]

1. The stabs.rar before crypting (15/35)
2. Insanity+ Crypter v1.0.8.exe got (0/35)
3. Crypted one with the above mentioned stabs.rar>stub.exe and here's the result.

sdfsdfgg.exe got 1/35 (Avast: MSIL; Avast is a beast & a bit!@ch)

(Dec 12, 2015 10:22 PM)Quaszaryx Wrote: [\[CITE\]](#) DarkComet is my free RAT go to. Very reliable, I recommend it.

Did it really work for you???

**stdio** - December 13, 2015, 4:06 am

You are from India? I know many broke Indian engineers.

Its quite sad!

**yinyung21** - December 13, 2015, 5:51 am

Bangladesh just beside India..... Yeah man, Frustrating.... There are people with lots of lots of lots of money and they don't want to invest in research. Without political influence or connections with higher ups you'll not get a decent job. there are exceptions though.

In this regard, India is in better position.
