Thread: [Help to bybass Qihoo-360 Detection in Virustotal](#)

IAmBabyFinn - December 8, 2015, 11:15 am

Hello

I am writing Realy simple code for spreading purpose. Its coded in C#

The only purpose of the code is to bybass virustotal.

If you wonder how i did it You can find it here :

[hackforums\(dot\)net/showthread.php?tid=5040149&page=4](#)

But theres a big fucking problem .

Antivirus called Qihoo Detectes Almoust everything

it has detected my download and other programs .

It finds my code : HEUR/QVM03.0.Malware.Gen

scan :

[virustotal\(dot\)com/et/file/f4dfbe7fced3e5069b99a3bf4c75d68dc9e93d80114f680ce6fa4c3bf476c90c/analysis/](#)

My code is pretty simple

1. Looks if the running machine Could be VM
2. Uncrypts stub using BASE 64 and command called certutil
3. Runs My stub and Displays my fake program error

Basicaly What triggers that detection?

Heres My Code and some screenshots.

[pastebin\(dot\)com/5QuVww10](#)

[gyazo\(dot\)com/4b9c1d03bceae5074e82651407fcf2ef](#)

Things i have tried :

Removing the anti virustotal code

Writing junk code (ALOT)

Tryng Other Icons or no icon

Building it in other Compiler Such as SharpDevelop

If you Could Help Me With this one I Would Be so Happy
