Thread: [Is there any programs that will do this automatically for me?](#)

JASON AND MEDEA - December 8, 2015, 2:49 pm

So basically I have a list of this with over 600 lines on it and I need a comma at the end of every line, I can't be bothered sitting here adding comma's and I'm sure there is something out there that'll do it for me. Please help! ?

Shoe - December 8, 2015, 2:51 pm

<http://stackoverflow.com/questions/11003761/notepad-add-to-every-line>

There ya go.

Armada - December 8, 2015, 2:52 pm

Macro would do it bro, record the key strokes and repeat. ?

Closed User - December 9, 2015, 2:56 pm

Download Notepad++

1. CTRL+F
2. Click the "Replace" tab
3. Mark regex at the bottom-left
There's 2 textboxes that you fill out, what you want to replace with whom
4. Click "Replace All" at the right side :)

How bout using your brain - December 10, 2015, 9:49 am

linux makes your life easy:

Code sed 's/\$/,/' yourfile

Josh? - December 10, 2015, 9:49 am

If you need this send me a PM and I'll make it, or do as "The Thrill" said and use Notepad++

If you have a mouse with buttons that are customizable, create a macro that will insert a comma and go down a line etc.

Energy Wizard - December 10, 2015, 5:05 pm

<http://www.textfixer.com/tools/alphabetize-text-words.php> Can do this (tick the box that says "Use a comma separator (For csv style data and arrays)").

Edit: Doesn't seem to working, sorry OP.

I do this :D

Betty Blue - December 10, 2015, 6:46 pm

I'd much rather prefer to do this with vim.

PHP Code

```
<?php
```

```
:%s!^!,!
```

```
<?php
```

```
:%s!^!,!
```

Vi can do the same thing but it's available on more vanilla platforms than Vim is.

Have you really not understood yet the usage of a stream editor ?

PHP Code

```
<?php
```

```
sed "s/$/,/g" <filename>
```

PHP Code

```
<?php
```

```
awk '{print $0","}' <filename>
```

Applies to both you eve and Zack.
