YungTrigz - December 9, 2015, 2:19 pm

So I just started learning vb yesterday and I made a calculator, it just adds the numbers together but Qihoo-360 detects it as a virus?

It's just a few lines of code that add the numbers.

<https://www.virustotal.com/en/file/4dd8246251e09981dbb67bad64815c4b6c041321a763f03284063c85776c7fa1/analysis/1449699450/>

Code Module Module1

```
Sub Main()  
    Console.WriteLine("Please enter the first number:")  
    Dim num1 As Double = Console.ReadLine()  
    Console.WriteLine("First number: " & num1)  
    Console.WriteLine("Please enter the second number:")  
    Dim num2 As Double = Console.ReadLine()  
    Console.WriteLine("Second number: " & num2)  
    Console.WriteLine("The numbers added together are: " & num1 + num2)  
    Console.ReadLine()  
End Sub
```

End Module

Just forget about Qihoo. It'll mark anything as a virus.

Empty VB project - Detected

Empty C# project - Nothing

One of my projects - Nothing

One of my projects (1 hour later) - Detected

One of my projects (24 hours later) - Nothing

He B TeMy - December 9, 2015, 2:52 pm

Unless you've heard someone actually using it, don't bother with shitty-ass AV's.

Lone - December 9, 2015, 9:32 pm

Probably because it is an unregistered program, insert what He b TeMy said.

iLogic™ - December 9, 2015, 10:31 pm

Do not bother w/ AVs. These types of detection come from assembly. Add icon to your program and change assembly information.

Cecilia - December 10, 2015, 12:37 am

360 will detect pretty much any .NET application as a virus.

Just ignore it.

soccerjuliu - December 11, 2015, 10:15 am

Same as me, Although I've fixed it
