Thread: [How to code your own stub for Aegis Crypter?](#)

byfrost1 - December 10, 2015, 8:29 am

I was wondering how one can build own stub to use with this crypter

site: <http://www.aegiscrypter.com/>

All of his stub used by his crypter is just 120kb ~ 180kb
The developer of this crypter on his readme.txt file claims as below

Quote:Sales stub source code,the stub is special code,
only a few lines,contain c++ code,c# code ,autoit code ,
If you know very simple programming,
You can easily make your own fud stub, even sales your stub.
I was wondering how this can be done, I will be glad if anyone suggest me a way/tut.

That is what he claims! ?
I think the output is autoit,...

Its Possible There are 2 ways to do these you can either use VB.net or C++ they must have a direct reference to the RATs code within i've tried my self but failed miserably but it is possible.

Hi...

To create your own STUB Follow that steps:

1. In VS Open new console application project (c#)
2. Copy the code to static Main(args) method in Program class, Alternatively make sure the is execute in when the console is stating up.
3. To achieve FUD, add extra code in the project, classes, methods, string manipulation, loops, If's

and other junk, that actually do nothing, but will confuse the AV.
4. After build you can generate your own unique stub from the exe file.

Thanks. ?

this sounds easy but not at all ... we keep trying it out .

kiddie95000 - July 24, 2023, 3:35 am

does anyone know a good crypter for free (or cracked version) for nanocore ?
or do you have a stub ?

Why would you open a 2017 post to ask this brother? If you want to ask something you can do it as well by simply opening a new thread.
