Thread: [Img link grabber](#)

**emadaldin1** - December 11, 2015, 3:27 am

Hello everybody

I need script to pull all img links from site just like google images

the problem you might face is

that the rest of the images

when you scroll down a new images will show up

etc

and after it grab all img links from the html or the page

store it on a file

then on linux

for each link on the text

open firefox + link of the image

that it

hope my thread is clear

summery

I need scripts that grab img links from website

you can give me an example and i will modify it

as long as you explain it well :D

note I'm using Ubuntu and Windows

**sfdemo** - December 11, 2015, 7:05 am

below are the steps to extract the links as the rest are relatively simple for you to google

1)use selenium to visit the site

2)grab all the image links using css selector and put them in a set

3)then use selenium to simulate the END button keypress and repeat step 2 again

Note you can run them in a loop and stop after 30 runs or so. So to sum it up you need knowledge of 1) python 2) css selector 3) selenium

Well your replay was going to be perfect

If you provided an example source code

pls provide a source code for your replay

I clearly asked for python script

Thanks

I will also try your answer for now

You can try with BeautifulSoup and requests.

This is just one example, how I grab specific image from Steam.

Python 2.7

Code import requests

from bs4 import BeautifulSoup

page = requests.get(steam\_game\_link)

soup = BeautifulSoup(page.content , 'lxml')

```
background_imgs = soup.find_all('img', {'class': 'game_header_image_full'})
for background_img in background_imgs:
    background_img = background_img.get('src')
```

I think if you make some changes, you are able to grab all links from page.

```
for background_img in background_imgs:
```

```
    background_img = background_img.get('src')
```

I think if you make some changes, you are able to grab all links from page.

note he has to scroll down such that new pages are able to load. i don't think you can do that with bs4.

my method definitely works since i have done that for pinterest and it is the same as what he describes
