Thread: [Grabbing RTT, Traceroute and so on of visited websites](#)

ejshadow - December 11, 2015, 11:50 am

So i managed to create for a class project, a python code who timestamps traceroute, rtt, traffic amount and so on...but there's just one problem. Once it gets all the data, it stamps the new one (only the time and size change) after some seconds. I just want this request to be sent once. Any suggestion?! Thank you!
