Thread: [Problem pivoting exploited server with Metasploit due to port forwarding](#)

**casruf** - December 12, 2015, 4:45 am

I have found the exploit for the internet server I want to hack. I have set everything up successfully so far except the port forwarding. I have searched google for links and I found [offensive-security.com/metasploit-unleashed/portfwd/](#) and done what they said yet I get this.

```
msf exploit/php_cgi_arg_injection) > portfwd
[-] Unknown command: portfwd.
msf exploit/php_cgi_arg_injection) > portfwd -h
[-] Unknown command: portfwd.
msf exploit/php_cgi_arg_injection) > back
msf > portfwd -h
[-] Unknown command: portfwd.
msf > portforward -h
[-] Unknown command: portforward.
pmsf > portfwd
[-] Unknown command: portfwd.
msf > portforward
[-] Unknown command: portforward.
msf > PORTFWD
[-] Unknown command: PORTFWD.
```

I have googled as much as I could to find information from other sites but nothing... I was hoping someone could help me out.

If you still need help port forwarding, let me know. Feel free to send me a PM. Please make sure you have Team Viewer installed, it wont take long to forward.

**casruf** - December 12, 2015, 5:18 pm

Add me on fb [facebook.com/james.mcnaughton.963](#). I will install Team Viewer now.

I didn't have enough posts to pm so I am just using fb.

Team Viewer is installed. I will share my ID over fb. I might be slow because I have been up for 19 hours apart from a 3 hour nap and I didn't have much sleep the night before.
