Thread: [delete item in Listbox and pc](#)

Natus12345 - December 12, 2015, 5:01 pm

How to delete items from ListBox .

Rhez - December 12, 2015, 6:01 pm

Delete Selected Item:

Code `ListBox1.Items.Remove(ListBox1.SelectedItem)`

I don't get the "pc" problem there.

Sooo File.Delete from IO namespace? You need to take some initiative and search things for yourself.

Natus12345 - December 13, 2015, 5:09 am

I search in internet and with File.Delete not working

```
foreach (var item in listBox1.SelectedItems)
{
    File.Delete((string)item);
}
```

Strong type your iterator and it'll handle the casting for you.

Code `foreach (string path in listBox1.SelectedItems)`

`File.Delete(path);`

Have you changed your ListBox control's SelectionMode property? It should be set to MultiSimple/Extended.

Read what it said. You still have it open in notepad or something.

My god, don't post fucking prints, the error is self explanatory, you may not understand english, but i can't translate it more cause it's clearly self-explanatory!

The file is being used by another process.

Next time, copy the error code and details, not taking a fucking print which i need to zoom and guess some words.

Natus12345 - December 13, 2015, 10:06 am

Topic can close my friend solve the error .
