Thread: [Huge Security Issue](#)

_r00t - December 13, 2015, 11:40 am

Hello Omni and Readers,

I have discovered in issue within the HackForums Real-Time Chatbox UserScript

A simple edit allows users to impersonate others, Take this:

I thought I was talking to froggy in the shoutbox but it turns out it isnt her,
She made a thread:

<https://hackforums.net/showthread.php?tid=5092753>

I made this GIF. The Chatbox user links to her profile, has her name and avatar, but it is not her.

Omni, Please implement Real-Time User Script Blocking

Cheers

Woah, nice find. Never caught that.

brian188246 - December 13, 2015, 11:41 am

This is a 3rd party script which Omni isn't involved with.

Is there a way to block these scripts? I know Omni said he wishes he could.

Light - December 13, 2015, 11:44 am

I've used the real-time chatbox a few times and everytime their would be obvious impersonators such as people pretending to be [Omniscient](#).

However this is a 3rd party script and [Omniscient](#) has nothing to do with this project.

Retribute - December 13, 2015, 11:45 am

Another reason for Omniscient to find userscripts more of a nuisance.

This, you have to talk with the creator of the script.

Cammy - December 13, 2015, 11:47 am

I found the solution for this problem

Don't use it

Omniscient - December 13, 2015, 11:48 am

I can't block what software you install on your computer. I can't make members smart.

Quote:However this is a 3rd party script and Omniscient has nothing to do with this project.

Exactly.

Stop using unofficial software that alters your HF experience. You risk a great deal.
