Personally, the first things that initially came to my mind when reading about Divine and what they stand for, with coding and whatnot, were on both sides of the spectrum. Ranging from some fun game for the community to play around with, and possibly a relatively far more superior and stable IRC bot. Just my two cents.

But, thank you for providing this to the community and I know a lot of people are looking forward to what Divine and it's members have to offer in the future.

I would like to see Divine make a name for itself, we haven't had too many groups that just stood out and make a name for themselves like Red Lions do etc.

We need you guys to find something you like, and work that shit like you ever have.

I feel like with this group and the new team, you guys can go somewhere. Possibly rebrand?

I actually wouldn't like to see Divine release a tool as most are already in use. If you have something new, and not done, then go for it.

Ideally what I'd like to see Divine do is maybe (have some members) take a section in HF they're comfortable with, and make a tutorial of some type, or have them release a product/offer a service in that section.
