How do you make program run automaticlly on startup in Python ?

For example computer starts and my keylogger automaticlly turns on.

Insane Developer - December 15, 2015, 6:38 pm

Add it to startup folder, Use registry keys (

<https://www.google.com/search?q=how+to+modify+registry+with+python&ie=utf-8&oe=utf-8>) or spoof a driver.

Ne virusa, o keylogger'i.

(English)

Not virus, keylogger.
