Thread: [Why is this happening to my computer!](#)

Humboldt - December 19, 2015, 4:24 pm

Hello, this image explains everything.

My computer did not just start up.

I am on Windows 10.

This is only one of the many problems I have encountered.

5chn4pp - December 19, 2015, 9:20 pm

Download [Farbar Recovery Scan Tool](#) and save it to your Desktop.

Right click to run as administrator (XP users click run after receipt of Windows Security Warning - Open File). When the tool opens click Yes to disclaimer.

Press Scan button.

It will produce a log called FRST.txt in the same directory the tool is run from.

Please copy and paste the log back here

The first time the tool is run it generates another log (Addition.txt - also located in the same directory as FRST.exe/FRST64.exe). Please also paste that along with the FRST.txt into your reply.

Humboldt - December 20, 2015, 2:15 pm

FRST.txt - <http://pastebin.com/BMuEKyQy>

Addition.txt - <http://pastebin.com/gfXci1YC>

Thanks for looking into this.

Wow this guy is back, He has the patience of a saint.
Don't worry this guy will solve your problem.

5chn4pp - December 20, 2015, 3:59 pm

Did you set a proxy on firefox?

Humboldt - December 24, 2015, 8:03 pm

(Dec 20, 2015 04:59 PM)Black Widow Wrote: [\[CITE\]](#) Did you set a proxy on firefox?
Yes firefox was used with proxy's. I don't ever use firefox though. Chrome is my main. Firefox for proxys.

Lukey159 - December 24, 2015, 9:46 pm

Have you ran a scan with an antivirus program, other then windows defender or malware bytes?

Having a quick look through the logs, could be nothing but this looks fishy, imgur.com/kJ6wdYi -
Please correct me if I'm wrong.

Humboldt - December 25, 2015, 2:10 am

Ug. SearchUI.exe and Explorer.exe keep not responding and I can't access task manager because that freezes up my whole computer. It's getting worse.. Just had to restart my computer 3 times in a row.

Never had problems like this on Windows 7, it seems my computer went to shit upgrading to Windows 8 then 10. It's not like I have a shitty build either

Lukey159 - December 25, 2015, 2:45 am

Have you tried running a virus scanner over it or malware bytes?

If the computer keeps freezing and wont let you do anything either from that machine or another download a bootable virus disk and run it. One is Kaspersky and can be downloaded here; support.kaspersky.com/viruses/rescuedisk.

Also you can boot into safe mode and run an online virus scanner / check your files or back up your files.. Details on how to boot into safe mode; digitalcitizen.life/4-ways-boot-safe-mode-windows-10

Of course I ran a virus scan..... I'm not going to do anything else you said.

Lukey159 - December 25, 2015, 2:59 am

That's good then.. Ok good luck, hopefully you fix the issue soon.

Regards!

bckc - December 25, 2015, 3:03 am

Boot into safe mode > Mbam scan

Open up the computer and clean with compressed air

Run a chkdsk

Good luck, merry Christmas.

jamale - December 25, 2015, 3:44 am

try to nstall a firewall

good luck

Kenny Schrub™ - December 25, 2015, 11:12 am

Dude something is sucking up your cpu close the unfamiliar process, that will help, sometimes there is file rundll or svchost which suck up whole cpu try closing it, that will help

5chn4pp - December 25, 2015, 11:30 am

Forgot about this thread

Please open notepad and copy/paste the contents in the code box below. (Do not include "Code:")

Code start

CreateRestorePoint:

CloseProcesses:

FF NetworkProxy: "socks", "127.0.0.1"

FF NetworkProxy: "socks_port", 23107

FF NetworkProxy: "type", 1

C:\ProgramData\7a7c474c653316b40cf3f876af6d084a5153ea4

EmptyTemp:

end

Click File, Save As and enter fixlist.txt as the file name.

NOTE. It's important that both files, FRST/FRST64 and fixlist.txt are in the same location or the fix will not work.

NOTICE: This script was written specifically for this user, for use on that particular machine. Running this on another machine may cause damage to your operating system

Run FRST/FRST64 and press the Fix button just once and wait.

If for some reason the tool needs a restart, please make sure you let the system restart normally. After that let the tool complete its run.

When finished FRST will generate a log on the Desktop (Fixlog.txt). Please post it to your reply.

It should be better, but please provide new FRST.txt and Addition.txt logs because the others are outdated.

If you have any files you do not want to be uploaded to virustotal, i suggest you zip them all up before doing this

Download [HitmanPro 3.7](#) and save it to your Desktop.
Right click to run as administrator. When the tool opens click Yes to disclaimer.

Make sure the update displays no errors, then click next.

Select I only want to perform a one-time scan and click next.

When its done, click Save Log and save it to your desktop.

Please copy and paste the log on pastebin.com and provide the link for the paste in your next reply.

Your computer is clean from malware, do you have any problems with it atm?

Miss_intengible - December 27, 2015, 5:27 pm

just uninstall all those dude
