Thread: [help to get this star wars flat theme](#)

Wordlist - December 20, 2015, 11:58 pm

hello there guys I need someone to tell me

1- how can I make flat theme like this

starwarstheforceawakenonlinefree.tk - the website is not mine nor i want you to click any links in it just check the theme it might be fake aka not official star wars and that's clear .tk ,,, I know that I just want to download the theme of the site , or how can i make a theme like this. Please also know that I am beginner on flat design

2- whats the hosting of this site , whats the domain hidden under this starwarstheforceawakenonlinefree.tk , sometimes its like name.blogspot.com they use .tk to make it look legit , so can anyone know if this uses a blog or wordpress.com site ?

thanks for help

I'm not sure where the website is hosted but the nameservers are pointed at

NS57.DOMAINCONTROL.COM
NS58.DOMAINCONTROL.COM

Can you get me the theme or tell me how to get it ?

Vitamin Energy - December 23, 2015, 1:34 pm

You could try downloading the site whit httrack.com

If you download it, all you have to do is upload it to your own server. If you a beginner making that on wordpress wont be that much easier.

It's not blogspot/wordpress, it's just pure HTML/CSS. Looks to be hosted on GoDaddy based on the nameservers. Go to /css/style.css, and use it in combination with Bootstrap if you're looking to get the same "theme".
