Is this a builder? Or a single bin?

Never bought one of these so I don't know what to expect...

detected/macro versions are.

GLWS, \$400 per bin is kinda overpriced imo, but then again if you know how to use it these exploits are worth much more.

You know that Oday word/pdf exploits etc.. go for thousands of dollar right?

Lord.Baltimore - December 23, 2015, 8:29 am

What's the CVE of this exploit ?

I'm sure that is delivred with a PoC on exploitdb

(Dec 23, 2015 06:14 AM)AlexCanvas Wrote: [\[CITE\]](#) You know that Oday word/pdf exploits etc.. go for thousands of dollar right?

It's not a Oday, it's just an exploit for unpatched word that is free on exploitdb...

Ofcourse i know its not a Oday, but my intentions was to show that exploits usually isnt cheap. If someone put together a bundle its still going to cost a bit :)

It's not a Oday, it's just an exploit for unpatched word that is free on exploitdb...So according to you even exploit kits is not worth at all since they all uses public exploits.

You may find this exploit easily but you know only few people can reFUD it and it is useless without making it FUD.

and

PM me if you wana know CVE No if you really wana buy.

Looking very nice working from 2003 to 2016, Good luck with sales.

bwills - December 23, 2015, 11:49 pm

Its cheap if it works from 2013 to 2016 word and fud even if not zero day. But seller should upload some video, proofs and cves used etc.

Uiqueblhats

90% of exploit kits use public exploit, the goal is to target unpatched browser and plugins.

To get an FUD exploit, just code the exploit yourself, add some obfuscation tips (RC4 and commercial protection for SWF by example) and it's done.

another micosoft exploit, hope this one works?

no vouch?

Hello Uiqueblhats.

Maybe you could post a video of this thing in action ? Im sure it will improve your sales too.

Best regards

Zombie [?] - December 26, 2015, 5:13 am

So much money for just a bin is too high IMHO. Reduce the prices and you might get actual sales.

midi123 - December 26, 2015, 5:15 am

Is this something like office exploit builder (which is free by the way)?

I don't think so. Even if there is, it will not be FUD.
