Thread: [autorun usb keylogger??](#)

Gpizzle - February 12, 2009, 3:49 pm

yeah i asked this same question in the newbie by mistake but is there a keylogger that i can have on a flash drive that auto starts upon insertion but its stealthy ?

BlueMelon - February 12, 2009, 3:52 pm

Auto run the Exe file from a remote keylogger

Gpizzle - February 12, 2009, 3:53 pm

will this work as soon as i insert the flash drive? please explain

flik4500 - February 12, 2009, 4:04 pm

I'll send you a PM, I'm sure i had one that i got off a other forum that worked decently. cheers

Yeah i sent you one!

Gpizzle - February 12, 2009, 4:18 pm

thank you sooo much :)

yeah ok that doesnt work uhhh is there one single file i could thro onto my flash drive that doesnt need to be installed just an executable an i could make an outrun,inf file please anyone i used to have one but forgot were i got it from

kevin24018 - February 12, 2009, 4:42 pm

what a flippin great idea, mp3's stored, one bound with logger etc etc, I love it!

Gpizzle - February 12, 2009, 4:46 pm

lol how do u do that tho?

kevin24018 - February 12, 2009, 5:11 pm

not sure about the auto run, windows will auto detect it, not sure if that can trigger anything on the device though unless they have windows set on like autorun. But if you loaded it with files and someone would want and one was bound etc. I wonder if the av's scan usb storages or only if you take files off of it to put on to the hd....hmmmm.

imposter johnson - March 30, 2009, 6:52 pm

Theres a certain usb you can buy, its about \$50 in the U.S. it will autorun anything thats autorunable no permission asked. I think its called U3 google it

Hagge® - March 31, 2009, 3:39 am

Code [autorun]

open=NameOfKeylogger.exe

Save as Autorun.ini

H3LL - April 4, 2009, 9:57 pm

Check out my personal keylogger, i can help you bind it into something else if you want to.

Etren - June 2, 2010, 7:15 pm

at the root of your usb drive, have a file named "autorun.inf" and code the appropriate commands in it.

to make one simply write in a text document and save the file as "autorun.inf"

kiko4ko - December 18, 2016, 6:47 am

How about making the user run it without knowing? Make the shortcuts on the desktop run the keylogger as well as the program they are pointing at.

iamnotactiveanymore - December 18, 2016, 1:49 pm

nigga gotta use a bad usb, just get one of those and rest is easy

xdavididhu - December 20, 2016, 9:03 am

Maybe use a USB HID emulator, like the USB RubberDucky from hak5 because newer OSes have autorun turned off for USB :/

Gpizzle - December 23, 2016, 12:08 pm

wtf I made this thread years ago lmaoooo

loooooooooooooooooooooo

b0jac - December 28, 2016, 8:25 am

This sounds rly good checking out the tut linked now!

cellzero - December 29, 2016, 11:51 pm

Rubber ducky. It has it own scripting language which is easy or you can get something from github which is prewritten.
