I wouldn't doubt his ebook at all.

What this method consists of:

This method is a gambling method. If you aren't willing to take this risk, please do not purchase it. You can profit very, very good if you follow my guide which will be given to you upon purchase. I have used this method for 4 days and yielded almost 5 BTC in the testing wallet.

What this method isnt:

This method is not my old method which I used to sell. Frankly I believe it is a better method. I've yielded better results using this one over my older one.

It is NOT martingale at all.

Basic package:

- The method
 - Pm support
-

Premium package:

- The method
 - Pm support
 - Skype support
 - Additional support if needed
-

Refund policy:

No refunds will be given, sorry. The reasons behind this are as follows..

- It will not be saturated, I'm only selling a number of copies.
 - If I were to refund you, I would be giving you a method in which you can make 1000s for free.
-

PayPal policy:

Upon purchasing with PayPal you are putting us both at risk. In the event of a chargeback, PayPal will be notified and a scam report will be opened against you. My PayPal is 100% verified under my own name, so your chances of winning a dispute will be slim. I can provide all the evidence needed to win. Just a heads up.

ToS

- Upon purchase, you agree to the following ToS.
- No redistributing this method at all.
- All sales are final. Refer to my refund policy.
- You understand that this is a gambling method so it comes with risks.
- You will not open a scam report if you are to lose your money. See above.
- In regards to the PayPal policy - a chargeback results in a scam report.

It's impossible. Whatever you do, there's always a chance, even if it's 0.000000000001%

It depends as it is gambling so I don't have an exact percentage.

(Dec 24, 2015 08:18 PM)Inveno Wrote: [\[CITE\]](#) I'm going to try my best to explain why I'm calling bullshit and do it in a non-hostile way.

First of all, every gambling system where you're betting against the house is developed in a way where absolutely no strategy can win. Bustabit is a game where it is 100% luck and no skill. There are theoretical methods, in which you should theoretically win, however when you apply these to conditions in which luck is the only factor, you can and will lose.

No such strategy exists. Each play is an individual play and does not relate to the last play in any way. If you believe that it does, you're following a gamblers fallacy, which has lost more than it has won. If you flip a coin 9 times and it lands on heads each time, it does not lower or higher the chance of it landing on tails the next time and is still the exact same 50/50 chance. The same applies to Bustabit.

From the beginning of your posts, all I wanted one was post like this, a non hostile, logical post.

Let me give you my counter argument.

I agree with what you said, how gambling is luck, but there are ways in which you can win more than you lose. At least with bustabit there are.

The thing I'm marketing helps you and gives you a higher chance of profitting. Again, if you want to see the method then by all means.

Observing history and recognizing patterns are two different things. There is obviously not going to be a pattern on a gambling site as it is going to be random, the method is not recognizing patterns, it's probability gambling, there is no guarantee of making money but it increases your odds
