Thread: [Best security protection combination](#)

aerohack - December 22, 2015, 7:37 pm

Which softwares do you use and recommend to keep your computer more secure as possible?

This is my security setup:

- Antivirus - Kaspersky Antivirus 2016
- Antimalware #1 - Malwarebytes Anti-Malware
- Antimalware #2 - Hitman Pro 3
- Firewall - Comodo Firewall
- Anti-exploit - Malwarebytes Anti-Exploit
- Anti-keylogger - KeyScrambler

Which Anti-trojan and Anti-rootkit that works in real-time do you recommend?

Feel free to add other categories, softwares and etc...

Knowledgeable - December 23, 2015, 7:47 pm

I use

Bitdefender Total Security

MBAM

KeyScrambler

SuperAntiSpyware Pro

I run adware cleaner frequently

c00perzz - December 26, 2015, 4:46 am

Anyone has experience with WebRoot? Any comments?

I use - Anti-exploit - Malwarebytes Anti-Exploit and im pretty happy with it.

I also use Malwarebytes Anti Malware.

Bitdefender was causing me problems so i uninstalled it.

Ahri????? - December 26, 2015, 4:51 am

Avast Free

Malwarebytes Free

Ublock Origin

and for account security

Lastpass premium

accounts with 16+ random characters

2FA on every account, 2FA device encrypted and latest patched android OS.

In a serious note, your setup is way too overkill and cpu consuming, you don't need 2 anti-malware and all these unless you are working for NASA. Even if you implement all this someone with DC rat and \$10 FUD crypter could put you in grave danger.

Security should be a usage policy not buying all crap from market.

biscuit deluxe - December 26, 2015, 4:55 am

- ESET Smart Security
- MalwareBytes Anti-Malware
- 1Password

c00perzz - December 26, 2015, 8:50 am

You have a valid point, but that doesn't mean one should be completely exposed and do anything about security.

If someone wants to hack you, he will no matter what. However by taking the proper measures, you avoid all other "average" dangers.

Of course i agree that one should not install every security solution out there... :p

I said security is a policy or life style, if you use windows disable Java in browser and never download suspected executable, that's all it takes to be secure in a base level without 0% additional software.

Do you want to say you don't have to install any Security Software if you disable Java in your Browser and don't open any Executable?

bulldogsnake - December 27, 2015, 2:01 am

I use ESET Nod32 unli trial version updated everytime. Setting will be Strict cleaning . auto delete Files that are infected. Autoblock Website with virus

Keb00b - December 28, 2015, 11:20 am

I'm just using Malwarebytes pro, and zonealarm firewall/antivirus. Work's wonders! ;-)

Andrewbarnabee - December 28, 2015, 11:26 am

I use Malwarebytes pro personally, but Eset Nod Antivirus is pretty good to.

Its Fusions - December 28, 2015, 5:47 pm

i have bitdefender thats it :/

PaddyWagonPlays - January 3, 2016, 6:43 pm

I first scan any file I'd like to download with www.hybrid-analysis.com/ to receive a behavioral analysis and scan of the file (A lot more, check out the site).

I use avira for real-time protection

Finally, I use HerdProtect to scan my pc with 68 antivirus scanners to ensure the safety of my computer.

¹³³⁷ - January 3, 2016, 7:41 pm

- Antivirus - Microsoft Security Essentials
- Antimalware #1 - Malwarebytes Anti-Malware
- Antimalware #2 - RogueKiller
- Firewall - Windows Firewall
- Anti-keylogger - Ghostpress

Lawsuit - January 4, 2016, 10:03 pm

Eset AV v9 -- I just keep using keys I find on the internet.
Malwarebytes Lifetime premium

-Simplicity- - January 6, 2016, 5:22 am

Operating System Windows 8.1 Where I would have scanned through the whole operating system source code and modify it to make it more secure and block backdoors or modify them. Programs I would use:

- BitDefender 2016 Internet Security (Certified + Gold Awarded)
- Blancco Computer Data Eraser (Certified + Gold Awarded)
- FolderLock 256B Encyption (Certified + Gold Awarded)
- System Mechanic 12.7 (Certified + Gold Awarded)
- Fortinet Firewall (Certified + Gold Awarded)
- SpyShelter Anti-KeyLogger (Certified + Gold Awarded)

I do not use social media at all, and I use maxed security settings in the operating system and I deactivate apps if they collect to much information and if can't modify it.

Wow... Your security really sucks... For real.

Slachter - January 7, 2016, 1:36 pm

Malwarebytes, Norton (i know), KeyScrambler.

??D - January 25, 2016, 4:39 am

I usually just use linux so I don't have to worry as much about it. If I'm forced to be in a Windows environment though:Avira

TinyWall

Zenma Anti-Logger

VeraCrypt
