Thread: [Read This Thread Now](#)

Calcyon - December 23, 2015, 3:00 am

It's come to my attention that a lot of HF members are getting their accounts hacked and lots of scams have been originating from this issue, so please take the time to go through this thread and learn how to secure your PC and your account.

Step 1.) Download a Password Manager

I personally use Dashlane, but all the other ones in this thread work just fine. These pieces of software encrypt all of your passwords into a file (Dashlane into the cloud) and prevents you from having your passwords stored in plain-text somewhere on your PC. If you are ratted or allow someone to view your screen over Skype, TeamViewer, or Join.me, they will be able to see your login to websites, and HF might be one of them.

[Dashlane Website](#)

[KeePass Website](#)

[1Password Website](#)

Step 2.) Checking for Malware

To ensure the integrity of your PC, please complete the following actions.

1.) Download [Advanced SystemCare 9](#). Upon opening, select the following from the list and nothing else:

- Spyware Removal
- Security Defense
- Vulnerability Fix

Once the scan is complete, restart your PC. You should now have your OS updated with the most recent security updates and removed possibly spyware lingering on your system.

2.) Download [Malwarebytes](#) and run a "Full Scan". Let this complete and remove anything it might have found on your system. After this scan, restart your PC again.

3.) Download [Malwarebytes Anti-Exploit](#). Run the installer and get it all set up, this will protect you from possible exploits on your system from Google Chrome, Internet Explorer, Firefox, etc.

4.) Download [CCleaner](#) and run a cleaner scan to clear your browser history, application logs, etc. (Select everything in the dialogs for cleaning). This will prevent hackers (skids) from downloading your web browser logs, and other files / information possibly containing sensitive data.

5.) Download [Zemana AntiLogger](#). This software will scramble your keys, which protects your system against keyloggers. Keyloggers are used to capture what you are typing and send it to the hacker (skid).

6.) Download the extensions [uBlock Origins](#) and [Ghostery](#) if you are a Chrome user. If not; I believe

Ghostery and uBlock Origins have extensions for other popular browsers as well. Ghostery blocks trackers on websites, and uBlock Origins is a really good adblock.

Step 3.) Use Common Sense

This one is something that's so basic that it's overlooked a lot.

Are you using common sense? When a user from HF who you've had 2 conversations with sends you a "program they made", do you download it and run it? If it really comes down to it, use either a virtual machine or [SandBoxie](#) to run the files you are sent before you run them on your actual system. Do not trust anyone, regardless of their reputation, their upgrade, their awards, etc. Always be cautious with everyone, you never know if they're compromised, have gone rogue, etc.

If you still believe you are infected or have any questions, feel free to PM me or post down below and I will assist you.

Thanks for this tutorial. However, they are getting hacked because of the SPAM situation. Also, it's called 2FA, that would've prevented every unwanted login from the 000host issue.

Omniscient is yet to add 2FA for L33T users.

Yes, SPAM is an issue; but lots of other people are just being infected with malware. Either way, I have a solution to the SPAM thing that I will fix soon.

KFC Watermelon - December 23, 2015, 3:11 am

Good tutorial...But please don't recommend iObit software.

Ahri????? - December 23, 2015, 3:12 am

I've already been doing this for over a year. In fact I just renewed my last pass subscription. Cheaper than dashlane lol

Why not? I personally have no complaints about Advanced SystemCare 9.

It's the only one of their products I use, because I admit; the rest are trash.

Cookie® - December 23, 2015, 6:18 am

Great tutorial ?

Will use all this now <3

I know he did; hence why I said "he's yet to add it".

HellBreather - December 23, 2015, 9:26 am

WOW!! nice post!! ?

Thanks a lot! ;)
