Thread: [Get website source using cookie and proxy](#)

SIM-2362662 - December 23, 2015, 6:56 am

So i basically need a code to get a website source.

It has to use cookies (because otherwise that website will return an error) and be able to use proxy.

I tried this code :

```
Code Private Function page_source(ByVal URL As String, proxy As String) As String
    Try
        Dim reader As StreamReader
        Dim Request As HttpWebRequest = HttpWebRequest.Create(URL)
        Request.UserAgent = "Mozilla/5.0 (Windows; U; Windows NT 5.1; en-US; rv:1.8.1.14)
Gecko/20080404 Firefox/2.0.0.14"
        Request.CookieContainer = CC
        If proxy.Length > 4 Then
            Dim myProxy As New WebProxy(proxy)
            Request.Proxy = myProxy
        End If
        Dim Response As HttpWebResponse = Request.GetResponse()
        reader = New StreamReader(Response.GetResponseStream())
        Return reader.ReadToEnd()
        Response.Close()
    Catch ex As Exception
        MsgBox(ex.Message)
    End Try
End Function
```

This code works fine on most of the websites i tried it. But not on the website i need right now.

That website is : <http://pastebin.com/mQqLKtes>

Do you get this error when sending the GET request to amazon.com or do you POST something?

I'm not sending any POST data. I'm using the code I posted on this thread.

Kraizy - December 23, 2015, 7:24 am

Well, I guess it works fine when not using any proxy, right? Think it has something to do with your proxy, maybe blacklisted or something else...where do you get your proxies from?

St?lk?r - December 23, 2015, 7:25 am

Just saying myhabit nearly uses more captchas than amazon ^^ and you a other url with for a cracker btw I'll have a look at it :)

I'm not even using a proxy. this is the code i use :

```
Dim source As String = page_source(url, "")
```

Number of captchas doesnt really matter. because the cracker will use proxies. So it will try just a single time with each proxy.

Thank you for looking into it . Let me know if you find anything ?

Don't know..I don't have any problems printing the html source with those few lines:

PHP Code

```
<?php
```

```
Dim req As Net.HttpWebRequest = Net.HttpWebRequest.Create(  
"https://www.amazon.com/ap/signin?openid.ns=http%3A%2F%2Fspecs.openid.net%2Fauth%2F2.0  
&pageId=quarterdeck&openid.identity=http%3A%2F%2Fspecs.openid.net%2Fauth%2F2.0%2Fiden  
tifier_select&clientContext=175-9903052-0801208&openid.claimed_id=http%3A%2F%2Fspecs.ope  
nid.net%2Fauth%2F2.0%2Fidentifier_select&openid.mode=checkid_setup&marketPlaceId=A39WR  
C2IB8YGEEK&openid.assoc_handle=quarterdeck&openid.return_to=https%3A%2F%2Fwww.myhabit  
.com%2Fsignin&&siteState=http%3A%2F%2Fwww.myhabit.com%2Fhomepage%3Fhash%3D%26  
weblabs%3DGodsonGiveGet%2FC%3B")
```

```
Dim myProxy As New Net.WebProxy("ip", port)  
req.Proxy = myProxy
```

```
Dim res As Net.HttpWebResponse = req.GetResponse()  
Dim strm As New IO.StreamReader(res.GetResponseStream())  
Dim html As String = strm.ReadToEnd()
```

```
Debug.Print(html)
```

Are you sure?

Because this is what i get :

Spoiler [\(Click to View\)](#)

EDIT : It was not working because of a HF typo bug. It works fine if i dont use any proxy. But it return an error if i try to use proxy. This error :

Well I think it has something to do with your proxies, maybe they are broke?
