there are many that can bypass them.... Yes it depends on cryptor to handle things,but user also have to be smart to use a legit assembly and undetected icon and file pump. ?

Importance of runtime check:

Runtime will give you this.

And scantime has no guarantee that it will bypass actually or not in execution. ?

As the latest update of Norton internet security I have a question , Does NIS detect the traffic when you execute the crypted file ?

because i bypass it when i use uncommon RAT but it detect Nanocore and DarkComet

NIS uses a firewall so yea ofcourse it will detect outgoing connection.

You need to force injection in to a whitelisted process to bypass its firewall.
