Thread: [I need a team logo/avatar](#)

Forgiven_nL - December 28, 2015, 6:41 pm

Hey I need a logo and avatar made for my competitive team on gamebattles.

Avatar Size: 64x64

Team logo Size: 250x200

Colors: Use you're best suggestions

Words: eXplode

Basically I'm looking for something that looks fierce. Almost intimidating just from looking at it (colors, and font-size could come into play).

If you're a gfx wiz and can pull this off with some nice looking gfx I'd appreciate it.

Just something simple:

Forgiven_nL - December 29, 2015, 8:11 am

Thanks for taking time to do this, I'm still looking for other ideas but in the mean time I will use this for now. The one thing I do like about this is the font style but other than that I think it could be improved. I do understand this was a free service though, so thank you again.

I know you based this completely off the word explode so let me be a little more clear, when I used the word explode it wasn't meant to mean explosion, but almost like getting turned up, dropping bombs(kills in cod). The terminology of a cod player is a little bit complex to understand if you don't play lol.

ex. you could have a pic of a gun, skull, fog, something related to warfare basically. I guess if you could make it look dope add the bomb in it but not the sun. If possible, I'd like the word to be in the image as well.

Haha, you used the same vector bg as me ^^

Heres the one i made:

i(cubeupload(com/Vy8GQy(png

replace (with . :-)

I do appreciate that, yours do have potential aswell. My personal tip on logo's is to leave out any hollow objects/text, and round off the image if you get what i mean. A good concept though, if you found some other skulls to work with and possibly displace the text a bit as i did with the 'X'. What you do is place your text and mark out the letter you want to play with, then cut to a new layer to do whatever you want to it. Just to make it 'POP' a bit more ^^
