Thread: [can you steal a slaves chrome session?](#)

G-Hot34 - January 1, 2016, 7:23 am

If one of my slaves is logged in on fb lets say , can I copy his browser directory files session cookie data and don't need to authenticate with username pw?

I can use his session?

If anyone knows a trick or two let me know thing is I have a corrupted keylogger which dosent give me the full pw in the keylogs.

so I need some other way to get in

thanks

Biker BoyZ - January 1, 2016, 7:24 am

you need password and username no matter what. you can get the cookies to bypass the security on Facebook e.g locking you out.

This sucks... I was really hoping there was a way to do this without username and password.

Later on the plugin was removed prolly blackhat reasons not allowed.

Peace

If you have Reverse proxy. it's easy

Ginseng Strip 2002 - January 1, 2016, 10:14 am

Even if you don't have their password it's easy as hell to get in their facebook/other account.

Live keylogger, do something subtle and make chrome crash or something, they'll log back in and you will see their strokes

Debireff - January 1, 2016, 1:46 pm

Yes, steal their cookies and inject them into browser + create a reverse proxy of them.

Can't I just move the whole chrome folder with the cookies and replace it with mine ? I did so , it added all his bookmarks and such. Now I just need to wait to he gets online so I can try to reverse while he logged into accounts

g-hot

This.

Steal or fork their sessions tokens, use reverse sock/http, enjoy

No login credentials needed

Jordan2222 - January 4, 2016, 3:10 pm

It'd be so easy if you could, too bad you can't.
