Thread: [\[INSTANT\]Buying all AGC @65%\[AUTOBUY\]](#)

DosEquis - January 2, 2016, 9:18 am

I'll buy any AGC you have @63% @65% BTC.
Keeping rate @65% for now

[email]agctobtcttransfer@gmail.com[/email]

ALL CODES MUST BE greater than or equal to \$5 and less than or equal to \$100! You won't get paid unless this is true.

Cite is currently down, stay posted- reopening date TBD.

ATM Making User-Hash List for New Cite: PM or Email me

Pros and Cons of my service:

Pros

Instantly get your btc. Great for checking if a code is valid when making a deal if you need to do so quickly

Get a receipt emailed to you with the code, code value, BTC transaction, and price of BTC at the time

If a code that is submitted is invalid you'll receive the reason why (ex: "Already redeemed to another account")

No chance of getting scammed while exchanging your agc

Don't have to find a buyer for your agc or wait for them to be online. This is on 24/7 when I have money unless I'm doing maintenance

Cons

Rate is 2% less than the average (65%) because of additional fees I have to pay for this (captchas, vps, etc.)

AGC must be \$5-\$100

TOS (MUST READ BEFORE SUBMITTING A CODE)

Check the balance of the btc address before sending a code. If you submit a code and the balance is not sufficient, you will not be paid

-If this does happen contact me, although I'd rather you just check before submitting a giftcard

If you are not paid for a gc and the balance of the btc address is substantial, the gc is invalid and you want proof, then you contact amazon customer support and ask them if it is valid and/or when it was redeemed. I don't have time to do so.

No carded codes, all codes must be obtained legally

If a code submitted is below \$5 or over \$100 you will not be paid. This is to prevent fraud as well as multiple small transactions which make me lose money.

Don't waste my time. The rate stays at what is said on the thread.

I can revoke your user-hash at any time or give out a limited number of user-hashes if I feel it necessary. I don't have to give you a user-hash if I don't want to.
