Thread: [Anyway to access ddos attacked website?](#)

-Simplicity- - January 2, 2016, 9:32 pm

This website has been attacked with a Denial of Service Attack 2 weeks ago but is still down, anyway to fix it?

Link: [Https:// # . com](#)

Mr.0_0 - January 2, 2016, 9:39 pm

My suggestion:

1. SSH into the server.
2. TAR or ZIP website content (document root) and apache configs.
3. Change server, thus changing your IP address.
4. Think about using CloudFlare (highly suggested)
5. Update your DNS records to point to your new IP address.
6. Rebuilt your server

Some things to note. The site is not trusted and it seems like the website is back up:

<http://downforeveryoneorjustme.com/#.com>

Hopefully youre not trying to infect anyone.

EDIT:

198.251.84.39 is the A record of the domain, which seems to be available.

Oh thanks, seems like its up and running now...

I'll add some extra security later
