Thread: [IP Block](#)

Dragnite - January 6, 2016, 12:45 pm

Was just browsing and I randomly get "IP Block Hackforums.net is blocking your access based on IP address" posting this on my phone. Anyone know why this just happened out of nowhere? Quite confused.

Edit: In Australia, tethered my phone to my PC and it's still happening but I can use HF on my phone just fine, this is slightly annoying.

Edit 2: Got this resolved, closing.

Check if you have any proxy or VPN on your phone. Some ISPs are blocking the connection too without reason.

No proxy or VPN, was browsing fine until it popped up, my ISP has allowed HF so far and if it were an ISP block wouldn't I get an ISP page or not be able to even get to this domain?
