Thread: [This computer is not running Genuine windows](#)

GuRuHaX - January 9, 2016, 5:13 am

Hello dear sirs and welcome,

I have a problem with Windows 7 activation.
Since i removed update "KB971033" ,couple of weeks later
each time i open up ,notepad or paint (all windows programs)
i get this ANOYING message :

[img]http://i68.[censored].com/xo08aw.png[/img]
http://nl.[censored].com/r/xo08aw/9 => replace [censored] with t i n y pic

Also this is been for a long time there without no issues
(right bottom of desktop):
(build 7601 windows is not genuine well known message)

[img]http://i63.[censored].com/1ihr3d.png[/img]
http://i63.[censored].com/1ihr3d.png

SORRY BUT I CAN'T SEEM TO UPLOAD A PIC. CORRECTELY
(tryed [img]""[/img] and link but you can see the result)
any help with that would be appreciated ?

I set the software Licensing service to DISABLED,
rearmed slmgr in cmd but this doesn't go away...

Also my activation status is NOT AVAILABLE
as my product ID.

Searched on the web but i seem to find the same procedures , i do not want to reinstall right away
since i have lots off stuff on my pc ,and programs , it would take couple of hours to do it and i need
it to program...

Its windows 7 Ultimate SP1
machine is x64

? HELP ME PLEASE HACKFORUM MEMBERS?

EliteTM - January 10, 2016, 7:43 pm

I bought an external hard drive and I'm currently backing up my entire computer as I type this, so I
can reinstall Windows 7 on it. When you boot up the computer does it give you a warning saying you
could be a victim of getting hacked? Since you aren't using a genuine copy of Windows? I aswell
have the message at the bottom of my desktop saying "This copy of Windows is not genuine". The
only way I can fix the message is to do a fresh install of Windows. I've tried checking slui.exe and it
still didn't fix it.

Try this if you still have the product key.

"Open command prompt with admin privileges. Always do this when command prompt needs to be run. The best way to do so is to click Start -> Run -> CMD (make sure you run as administrator) Type in 'slmgr.vbs /upk'. This will uninstall the current key in Windows. Restart your P.C. Run CMD again.

Type in 'slmgr.vbs /rearm'. This resets the time needed to activate Windows, and will reset the Windows Genuine Advantage issue, if it's there. Restart your P.C.

Run CMD again. Type in 'slmgr.vbs /ipk <product key here>' where product key represents your product key, including dashes.

Restart your P.C. when this finishes. Go to Control Panel -> System and Security -> System and scroll and activate Windows. It may take a moment or two, but it should come back as fully activated"

Hello dear sir ,

Quote:When you boot up the computer does it give you a warning saying you could be a victim of getting hacked?

No i don't have this message , just the build 7601 windows is not genuine in the bottom right corner of desktop and this annoying message every time i open up a windows integrated program.

So i tried 'slmgr.vbs /upk' but this returned " slmgr.vbs /upk is not recognized as an internal or external command operable program or batch file."

But my activation status is already not available so is my product ID.

I also tried slmgr.vbs /ipk "product key value" but this returned the same error.

Any other ideas ? ?

?

This can be closed .

I have reinstalled windows as nothing could resolved my activation issue .
Thank you all !
