Hello

is there a software or component for delphi opensource or for face recognition that support database microsoft sql or mysql server ?

Best Regards

raghavsood999 - February 7, 2016, 12:32 am

I dont think so. For that you must import webcam libraries. There is a component called : Twebcamcapture from torry.net

With that components events there is an event called on stream. Over there if you add the appropriate code you may get there

Regina Spektor - February 7, 2016, 5:31 am

how is this?

mrsimo - February 18, 2016, 4:09 pm

thank you very much

i know luxand but it is very very expansive ?

Regina Spektor - March 5, 2016, 7:44 am

you might be able to find a leaked version online, or a cracked version....do a bit of digging in google man u might find it for free

mrsimo - March 5, 2016, 11:24 am

no i need a legal version for a project can't use cracked one

I believe the key would be starting with keypoint recognition, where are the edges of the eyes, where are the eyebrows, nostrils mouth edges, at what ratios are each measurement to one another, a perceptron could classify all these inputs and return the correct output given training of all angles it will encounter.

Some form of autoassociative memory like a hopfield network would allow for the recognition from

partial stimulus.

Delphi was the first language I learnt after game maker language, but this is too complex for me, image recognition is extremely difficult even in languages built for AI.
