Thread: [How to redirect url.com to url.com/home](#)

Underworldproblem - January 10, 2016, 1:03 pm

I believe there is a way to do this because I have done this before, but forgot the code. I would really appreciate this. Thanks.

I think I need like a htaccess file?

Frenzied - January 10, 2016, 1:03 pm

Rename your home directory to index.php or index.html, I think haha

Krew - January 10, 2016, 1:05 pm

Edit ".htaccess"

Input: "DirectoryIndex /home"

Done.

MD5 - January 10, 2016, 1:05 pm

Index.php:

```
<?php headers("Location: /home"); ?>
```

Underworldproblem - January 10, 2016, 1:05 pm

in my public_html i have 0 files. but if i go to public_html/ home, my website is in there.

so if someone goes to my website (url.com) they will get a blank page, unless they type url.com/home

so how can i fix that?

Krew - January 10, 2016, 1:06 pm

so how can i fix that?

I gave you the solution already.

Place a .htaccess file in your main directory with the contents.

King of Diamonds - January 10, 2016, 1:07 pm

htaccess

Code Options +FollowSymLinks

RewriteEngine On

```
RewriteCond %{SCRIPT_FILENAME} !-d
```

```
RewriteCond %{SCRIPT_FILENAME} !-f
```

RewriteRule ^.*\$./index.php
That's what I use for my website, but I think you can use:
Code DirectoryIndex /home

so if someone goes to my website (url.com) they will get a blank page, unless they type url.com/home

so how can I fix that?

In the www root create a file called index.php and put this in:

```
<?php headers("Location: /home"); ?>
```

minimalist - January 10, 2016, 1:08 pm

Code RewriteEngine On

```
RewriteCond %{HTTP_HOST} ^(www.)?yourdomainhere.net$
```

```
RewriteRule ^(/)?$ directoryto/redirectto [L]
```

File you can just edit and paste into your public_html

<http://expirebox.com/download/acb26186696e2fa695bac29979d70480.html>

Underworldproblem - January 10, 2016, 1:18 pm

One more problem.

RewriteEngine On

```
RewriteCond %{HTTP_HOST} ^(www.)?yourdomainhere.net$
```

```
RewriteRule ^(/)?$ directoryto/redirectto [L]
```

Works.

Except I had to remove 'j' ([\(www.\)?yourdomainhere.net\\$](#))

Was that an error? or was I wrong to remove it

Also, directoryto I put home, is the redirectto the same? home?

Rushax - January 10, 2016, 4:27 pm

OP surely you want your website to redirect to

<http://www.domain.com>

NOT

<http://www.domain.com/home>

Whose going to remember to add /home on the end?

If I were you, I would transfer all files to public_html folder so it comes under the initial root directory.

If you still want to continue on with home the code given in the example above for .htaccess file:

OR you could upload a file within the root directory with

Code

```
<?php header( 'Location: http://www.domain/home' ) ; ?>
```

 Naming the file index.php

Would not advise this method though as it might affect SEO results.
