Mefie - January 10, 2016, 1:52 pm

I do not maintain this project anymore so if you don't like it, just use another one
However, your feedback will help me make your future projects better I focus on now.

Caution everyone - New Request System

How to get this tool? [\(Click to View\)](#)

- 1) Create a new e-mail account you use only for this purpose
- 2) Share it with me in the way you can (PM or else)
- 3) Receive your download in e-mail

Your message must contain your full e-mail address with space separated from other text and must contain an "@" character.

- I will periodically run an automated software to send this tool to the given addresses.

Yo tooler friends!

If you have no permission to send and receive private messages on HF, you may still get this tool

Latest - v1.3 Update

New features:

- This is a super stable version
- GUI is now even more easier
- Sophisticated file handling
- System requirements went minimal
- Still scantime / runtime Fully undetectable to all features

I'll try thx :>>>>>>>>>>

Spectre - January 15, 2016, 9:08 pm

This looks really good?

Does the spoofer just add the extension or actually change the file type?

Can i make the picture actually open and the rat run?

You're welcome. You know how to get it. Still waiting your PM ?

Since you're new (and cannot use PM system yet) you could use (or create a new) e-mail account that address you will publicly share then I could send the download to you to your address

It is a full spoofer (and is able to do more)

You can make a FUD file with it that someone clicks on, picture actually opens and your RAT gets installed in silence.

HiddenModerator - January 16, 2016, 8:36 am

Can I try this too :D it looks awesome

and thanks for the Newbie friendly manual hehe

I would say getting some posts to be able to PM is not a wizardry, but I don't want you to post only to get this tool. I let you use my software and if you find it helpful, don't forget to give back the help to the community where you can! Best wishes

Thank you!

I can see, this software deserves an update from me soon since it has been a good tool so far.

I am going to update its thread, too, with new design and screenshot as soon as they are done. I just have multiple projects to work on, but you can see the features it has already and I can send the download if you ask.

wedontknow - January 31, 2016, 10:54 pm

I am also unable to pm yet. can I still get this tool :D ?

Mefie - February 1, 2016, 6:38 am

I will send this software again I just take some time to upgrade it with new features.

It is being upraded at the moment: new features, quicker work.

Your requests have been saved and are being proceeded as soon as I am done coding new version!

oliverstone30 - February 1, 2016, 5:52 pm

I can't still send you a PM because of newbie protection, how can we do it? I really need a good binder that is able to bind large files of 500 MB for example since mfilebinder can't do it. Otherwise I would really appreciate a binder that suits me. Also I'm binding a scr with an exe and also need to have an icon changer. Thanks a lot to everyone.

People say it is a good binder and it is able to bind large files of 500 MB or more. In fact, it can bind scr with exe too, also easy GUI that suits most people.

Thank you man ?

I have added bulk bind mode that makes the function possible to give a list of filenames (more than two) to the application and let it bind them all together.

Also, automated and timed binding possibilities were added.

I sent direct download to everyone who sent me a PM

You received it to your anon404acab address.

Use it with care!

Do not lose access as you can get updates in the same channel and I, too, may contact you in connection with your experience

Thank you! ?

I have chosen to take care of an other development and I let it took my time.

Seeing how many requests I still am receiving on this, though, I will put further efforts into this project.

Just wait until I fix the thread and bring back the development from my folders

I am having a very busy time so I would like everyone who has requested before to re-send it if you still want to get the latest version of this application and some patience please, you will get it until Christmas, I promise ?

This v1.3 is the last release of MefBind. Rules are the same. Enjoy!
