Thread: [\[Specialists\] Ultimate Clash of Clans Botting Guide // Everything you need to know](#)

Phreakdaine - January 14, 2016, 9:48 pm

[img]http://vignette3.wikia.nocookie.net/clashofclans/images/1/11/Clash_of_clans_logo_600_270.png/revision/latest?cb=20130723160549[/img] Ultimate Clash of Clans Botting Guide

In this thread I will walk you through the ins and outs of botting for Clash of Clans. I plan to keep this updated with fresh information and strategies for as long as I continue playing the game.

Topics Covered

- Bot Installation
- Configuration Options
- Setting Presets
- Multi-Account Botting
- Botting for Profit Strategies

Requirements

- A Computer with Windows
- Clash of Clans Account(s)
- Google Account(s)

1. Bot Installation

There are many many bots out there, but in the interest of safety and simplicity, we will only talk about one. mybot.run. This is one of the (if not the first) original bots for Clash of Clans. It is built with AutoIT, and is 100% open source, ensuring the safety and validity of the software.

BEWARE OF ALL OTHER BOTS. There are literally hundreds of ripoffs that have taken the source for mybot.run and simply re-skinned it with their own graphics, maybe a couple different features, but then have closed the source. Do NOT download any bot with a closed source. You have no way of knowing whether or not there is something malicious hiding in the software if it is not open source. Also there is simply no reason to use another bot, as this one does everything you could want it to.

>>>>ON THAT NOTE<<<<

One that I would be especially cautious of is Clashfarmer, the bot that gets spam advertised in this section constantly. It is a confirmed rip of the MyBot.run source code that has been altered in little ways here and there, then closed. I can not confirm whether there is anything malicious in the bot, but more to the point there's no reason to ever risk using a closed source bot that has been intentionally ripped from the

botting standard MyBot. Their advertisers here make false claims constantly about super special "features" that clashfarmer has, claiming no other bot can do those things, all of which are straight up lies. Some of the common ones I see are....

"Mybot can't deploy with intelligent red line deployment" [FALSE]

"Mybot can't run in background mode, allowing you to do other things" [FALSE]

"You get better loot results with other bots" [FALSE, this has 100% to do with your settings, not the bot]

Basically just stay away from this, there's no reason to not use the most trusted bot on the market, which is open source, and free.

Here are some examples of the spam advertisers here.

>>>>>[SPAM EXAMPLES](#)<<<<<<

The public Git for MyBot can be found here: <https://github.com/MyBotRun/MyBot>

All official MyBot releases are published here:

<https://mybot.run/forums/index.php?/forum/4-official-releases/>

>>>> [CURRENT RELEASE v5.1.4](#) <<<<<

>>>> [Alternate Mirror v5.1.4](#) <<<<<

Step 1

Download Software Dependencies

Install Microsoft Visual C++ 2010 Redistributable Package (x86) or latest version

>>>[\[Click here to Download\]](#)<<<

Install Microsoft .NET Framework 4.5 or latest version

>>>[\[Click here to Download\]](#)<<<

Optional Software but Recommended

Install Latest Version of Autoit

>>>[\[Click here to Download\]](#)<<<

Step 2

Visit >>> <https://mybot.run/forums> <<< and sign up for a forum account.

An email confirmation will be required. Then navigate to the latest release thread.

Step 3

Download the bot in the provided .zip.

Extract the folder from the .zip file to a location on your computer.

(Use a software like WinZip, 7Zip, or Winrar to extract it) [\[Download Winrar\]](#)

Congratulations. Your bot is installed. Now move on to setting up Bluestacks.

Step 4

Download & Install Root Bluestacks. [\[Download Here\]](#) Extract the Bluestacks folder inside the .zip file to a location on your computer.

Double click the .msi installer file to install a rooted version of Bluestacks.

Upon opening Bluestacks for the first time, you will be prompted to sign into google with your existing google account. Now would be a good time to create a new one if you do not have one already, and set up Bluestacks to run with it.

Once Bluestacks is Installed, run the .bat file labeled "RUN ME LAST". Once the script is running, hit "Y" to enable all the options. This will set your Bluestacks default size to the correct ratio, which is required for the bot to run properly. It will also pre-load some intuitive default settings.

Step 5

Install Clash of Clans.

Open the Google Play Store app, and search for 'Clash of Clans'. Install the APP, and open it.

Once the app is open, visit your settings, and click the button labeled "Google Play Sign In". You may be prompted to install the latest version of the Google Play Games app. If you are, install it then return to Clash of Clans. Once you are able, press the button to connect your Google account to the emulator "device". If you already have a Clash of Clans village attached to that account, it will be loaded.

Phreakdeline - January 14, 2016, 9:49 pm

2. Configuration Options

Many of the options for MyBot, are fairly self explanatory. However for the sake of being thorough, we're going to cover all of them, in detail. If you feel like this isn't something you need, feel free to skip ahead and refer back to this later if/when you need it.

To start, we'll discuss the 3 tabs you will likely spend the least time focusing on.

1. Log | 2. Notify | 3. Stats

Spoiler ([Click to View](#))

1. Log

The log is incredibly self explanatory. It logs all the actions that the bot takes. It IS important, because it is where you can monitor what your bot is doing, troubleshoot any performance issues, and watch for any major errors. That is the entire function of this tab however, nothing else.

2. Notify

This tab is very optional. It allows you to connect to the bot remotely with PushBullet. You can perform basic functions like starting your bot, stopping it, pausing, checking your loot screenshots, and checking the log. If you decide you want to use this feature, check out PushBullet at the link below.

[\[PushBullet\]](#)

3. Stats

The stats tab is entirely passive, in that you don't actually DO anything here. It is still very important, because it allows you to view the aggregate statistics of your bot performance. Watch it closely to see how efficient your settings are. Primarily, watch the top right section, "Gain per Hour" which will give you your average hourly loot gain at the time of reading.

The tabs listed here are important to have set up, but are still "optional".

4. Misc | 5. Expert | 6. Donate
Spoiler ([Click to View](#))

4. Misc

The miscellaneous tab contains a few very important settings.

1. Halt Attack

This gives you many different options to either stop the bot from attacking, or even shut down your PC, upon meeting certain conditions. Typically, for farming it is wise to stop the bot from attacking when your gold AND elixir are both full.

2. Switch Profiles

With this option, you can save the various settings in your bot as a preset. This allows you to experiment with different configuration options safely, without fear of losing your currently working settings.

3. Rearm, Collect, Clear

Check the boxes to let the bot perform these tasks for you. It's recommended that you leave these on at all times for maximum efficiency.

4. Trophy Settings

This is an incredibly critical setting, and can be the primary reason for your success or failure when botting. You are required to define a trophy range that your bot will stay within while searching for bases to attack. Read through the suggestions later in this guide, and do some of your own research and testing to determine the best range for your town hall level, and attack style.

Check the boxes to allow the bot to use heroes when intentionally dropping trophies, and to attack a dead base found on the first search when dropping trophies. I would recommend that you leave both of these options checked.

5. Resume Bot

Fill in the MINIMUM amount of resources you want to have before your bot will start attacking again. If these values are too low, or not filled in, the bot can possibly search for a base continually until it runs you out of gold. Choose an amount that will allow for a good amount of searches, as well as enough elixir to train a couple full sets of troops. To be safe, I set this to 200,000 gold and elixir.

6. Village Search Delay

This setting will determine how fast your bot clicks "next" when searching for a base. It may be tempting to set this low, however to avoid unwanted app crashes, and to make your bot behave more human, I recommend setting this to a minimum of 2+ seconds, and a maximum of 5+ seconds. This should avoid any problems.

7. Locate Manually

Below this header you will see the images for many of your primary village buildings. These can be used when you move a building, to re-associate it's location with the bot. All the way to the right is the image of a lvl1 town hall with a red X on it. This is used to completely wipe all location settings. Use this when you have made significant changes to your base layout, or switched to one of your saved layouts.

5. Expert

This tab contains some useful, but mostly optional settings.

1. When Bot Loads

Check these options if you are concerned about file build up. If you want to retain all your logs and screenshots, leave these all cleared. It is a good idea though to keep "Check for Updates" checked to be notified of new updates.

2. When Bot Starts

There is an auto start option which will begin the bot functions shortly after opening. I recommend you leave this off unless you are 100% confident in your settings, and rarely manage your village manually. Leave "Check Game Language" on. Leave Auto Align unchecked unless you are on a VM and feel the need to use it.

3. Timing

This setting will determine how fast your bot clicks to train troops. I recommend a MINIMUM of 10ms, though it is acceptable to go higher, especially with slower PCs

4. Force Total Army Camp

Use this option to set your max army capacity. If this is not checked, the bot will pause and ask you.

6. Clan Castle Scheduler

These options are fairly self explanatory. Check the boxes for all the hours of the day that you want the bot to perform the corresponding actions. In the interest of avoiding detection, you should schedule these actions to perform only during "normal" waking hours. Pick a fake "schedule" of say 6am to 11pm, and un-check the rest of the boxes. The times selected are irrelevant if you chose not to allow clan castle actions at all.

7. Boost Barracks Scheduler

Use the same thought process as we did for the clan castle, only for barracks boosting. Boosting barracks isn't necessary, and requires a good number of gems. I would avoid boosting unless you are rushing your growth for a particular reason.

8. Photo Screenshot Options

Choose to have your loot screenshots saved as .png, and if you prefer, to hide the village & clan names.

6. Donate

Check the "Request for" box to allow your bot to automatically request CC troops. It will post your request with whatever message you put in the text box.

Below that are pictures of every troop in clash of clans. Select each one to set the donation options for that type of troop. On the bottom left is a box for keywords that will trigger a donation from your bot. So if you put "barb" and "barbarians" in that box, your bot will donate barbarians to the requesting person, if you have barbarians.

The dark grey box on the right allows you to set blacklist terms. If the bot sees

any of THESE words, it will NOT donate that type of troop. If you have mid level troops, it is a good idea to black list words like "max" and "maxed", as well as words or phrases that mean people DON'T want barbarians, like "no barbarians" and "no barb" etc.

Check the box "Donate [trooptype]" to allow the bot to donate that troop type. If it is left unchecked, it will not donate that troop. Leave all troop boxes unchecked to avoid donating at all. There is also a "donate to all" checkbox, which will override ALL keywords, and simply donate that troop ANY time it sees a request. It is recommended that you do not use this if you plan to act like a real human to your clan.

The donation keywords and options must be set for EVERY troop type.

These are some of your most important tabs.

7. Troops | 8. Search | 9. Attack

Spoiler ([Click to View](#))

7. Troops

This tab will determine the composition of the army that your bot trains.

1. Army Composition.

Use this drop down menu to chose your army composition. All the options are presets that do not allow you to customize your army, except for "Custom Army" and "Barrack Mode". The options are fairly self explanatory.

If you choose Custom Army, you must fill in the percentages below corresponding to Barbarians, Archers, and Goblins. The TOTAL of your percentages must equal 100.

2. Barrack Mode.

If you have selected "Barrack Mode" under the Army Composition drop down, this section will be accessible. Barrack Mode means that you define a certain troop type, for each barrack to produce, and it simply pumps out that unit constantly. It allows you to split your troop type 50/50, 25/75, 25/25/25/25, or 25/25/50 etc. This is a popular troop setting, due to it's simplicity, and efficiency.

3. Army Strength.

Below Barrack Mode you will find the Army Strength Option. This will allow your bot to start searching for bases when your armies are X% full.

4. Additional Troops.

If you have selected Custom Army from the drop down menu, this is where you will decide what additional troops (aside from the basic barb arch gob) that you want to train for attacks. Simply fill in the amount next to their portrait.

5. Additional Dark Troops.

Exactly the same as Additional Troops, but for Dark Elixir troops.

6. Spells.

Allows the bot to auto train certain spells. Be sure to set your max capacity.

7. Boost Options.

These options allow you to set a total amount of boosts that the bot will start on your buildings when it begins running. To avoid accidental gem spending, I suggest that you leave all of these options disabled, and only boost manually.

8. Search

This is arguably THE most important tab in the bot. I will determine the parameters your bot will search with, when looking for a base to attack.

1. Search Mode.

This option tells the bot whether to search for only DeadBases, only LiveBases, or both Dead AND Live bases when looking for a base to attack.

It is common practice to only search for deadbases, as they will typically yield a MUCH greater loot return, should be clear of traps, etc.

2. Search Options.

Check the top box to be alerted with a push message notification when a base is chosen.

Check the bottom box to force the bot to start over looking for a base after X amount of searches.

I do not recommend that you use the second option, instead play with your settings to find the right choice.

3. DeadBase Conditions

Gold and Elixir. You must choose whether you want the bot to search for a specific amount of gold AND elixir in a single base, an amount of gold OR elixir to search for, or a TOTAL amount of gold + elixir.

Gold AND Elixir requires that BOTH number conditions be met before attacking.

Gold OR Elixir requires that only ONE of the specified numbers be met before attacking.

Gold + Elixir requires a TOTAL loot amount be met before attacking.

ie; If my TOTAL amount is 400,000, the bot would attack on the following...

200Kg|200Ke, 100Kg|300Ke, 10Kg|390Ke etc...

In this section, there are several more options you have to narrow down the exact type of base you want to search for. They are fairly self explanatory. Be aware though that every option you add will likely increase the time it takes for the bot to find each base, thereby decreasing your total hourly loot gain. It is wise to find settings that work for you, while selecting the minimum amount of options.

Lastly there is an option to custom define what the bot considers a DeadBase.

I would recommend letting the bot decide, and staying away from this option.

4. LiveBase Conditions

Exactly the same options as DeadBase, but for LiveBase. This is unusable if DB only is selected.

5. Search Reduction

This option will allow the bot to "loosen" the search requirements a bit by dropping the required gold and elixir to select a base. I recommend leaving this at default.

9. Attack

DeadBase/LiveBase Deploy

All the options on this page are mirrored, one side for DeadBases, one side for LiveBases. The exceptions are the clan castle balance in the middle, and the hero options at the bottom. For Hero Abilities, use auto activate. The smart feature works very well, and you'll get the most out of your heroes in battle.

All of these options are up to your preference for how you want to deploy in an attack.

One relatively important option is Delay Unit / Wave. I would recommend setting this to 4 and 7, in order to appear more human like in your actions.

Smart Attack will deploy troops just outside the red line, positioning them as close to buildings as possible. This is up to you whether you want to use it or not.

Drop Type will allow you to select how the bot deploys your troops. You can select near mines, elixir collectors, or dark elixir drills.

Check boxes below will determine whether the bot uses heroes for farming. You should always use them, as they can add some serious punch to your attacks.

10. Attack Adv | 11. End Battle | 12. Upgrade
Spoiler ([Click to View](#))

10. Attack Adv

This tab has some very optional advanced options. If you are new to botting, I recommend staying away from these for now and coming back later.

1. Attack Now.

Check this to have a "force attack" button on the bot during search mode. This is only mildly useful as you can manually attack if you see a base you want.

2. Bully Attack Combo

This can be a useful option if you are struggling to find bases within a reasonable amount of searches. After X amount of searches, bot will just attack a lower level base.

3. Defense Farming

Only used for farming "Unbreakable" achievement. Stay away for loot farming.

4. TH Snipe

This option used to be for growing trophy count, however it can now be useful to find those bases who still have their town hall exposed, to snipe a bit of extra loot while your troops train. I personally do not use this, as the return is rarely worth the cost of gold searching for a base with this condition.

11. End Battle

This tab provides a few options that determine when the bot will end an attack. Pretty typical settings for farming are...

No new loot raided within 20 sec

No new loot raided within 5 sec AND resources are below 2,000, 2,000, 0

When No Resources Left

You can also choose to share a replay with your clan after each attack. This is NOT recommended if you want to appear human to your clan, as it will spam.

12. Upgrade

This tab is all about auto-upgrading your buildings and especially your walls. Use this only if you plan to run your bot for very long periods of time, ie; more than a day or so.

1. Laboratory.

Check the box and use the drop down menu to queue the next laboratory upgrade.

1. Upgrade Heroes.

Check the boxes to allow the bot to upgrade heroes as long as there is Dark Elixir available.

1. Buildings or Heroes.

Use these options to queue up and prioritize building and hero upgrades.

1. Minimum Gold, Elixir, & Dark Elixir.

Use these options to determine the minimum amount of gold that the bot will keep before beginning any upgrades. It is recommended to keep this around or above your farming minimum.

1. Walls.

Check the box to enable the bot to automatically search for walls periodically and upgrade them.

You must select the proper level wall on the right from the drop down menu, and chose whether to use gold, elixir, or both for upgrades (on the appropriate level walls).

If you leave this running for long periods of time, check the box to save 1 builder for walls.

Phreakdeline - January 14, 2016, 9:50 pm

3. Setting Presets

There are a few primary reasons that someone would want to bot in Clash of Clans.

1. To accelerate the gain of gold and elixir, and thereby the game progression.
2. To perform normal actions, for those that don't have time to babysit the game.
3. Grow multiple accounts either for personal use, to share, or to sell.

In MOST cases, people bot because earning gold and elixir in Clash of Clans can be very tedious and time consuming. It allows you to focus on the fun parts of the game.

Because of that, our strategy focus will be all about maximizing your resource gain.

Here I'll list a couple recommended starter settings to get you farming right away. Experiment with things on your own, and try new things to find what works best for you.

TH11

Spoiler ([Click to View](#))

Search: Deadbase Only, 160k Elixir + Gold, 500 DE, Collector Level 6

Troops: 50% Archer, 50% Barbarian, 20 Minions

Attack: All Sides
Trophy Range: 700-900

TH10
Spoiler ([Click to View](#))

Search: Deadbase Only, 150k Elixir + Gold
Troops: Barrack Mode[Barb/Barb/Arch/Arch]
Attack: All Sides
Trophy Range: 2050-2350

Search: Deadbase Only, 80k Elixir & 80k Gold
Troops: Barrack Mode[Barb/Arch/Arch/Giants] +15 minions
Attack: All Sides
Trophy Range: 800-1200

TH9
Spoiler ([Click to View](#))
Running this on my TH9 as we speak, and currently my BEST performing setting!
Search: Deadbase Only, 80k Elixir & 80k Gold
Troops: Barrack Mode[Barb/Giant/Arch/Arch]
Attack: All Sides
Trophy Range: 1950-2300

TH8
Spoiler ([Click to View](#))
Custom made this one for my TH8, running very well.
Search: Deadbase Only, 80k Elixir & 80k Gold
Troops: Custom Army 65% Archer, 35% Barbarian, 4 Giants, 4 Wall Breakers
Attack: All Sides
Trophy Range: 900-1150

TH7
Spoiler ([Click to View](#))
Search: Deadbase Only, 150k Gold + Elixir
Troops: Barrack Mode [Barb/Arch/Arch/Arch]
Attack: All Sides
Trophy Range: 600-1000

TH6
Spoiler ([Click to View](#))
Search: Deadbase and Livebase, 100k Gold + Elixir
Troops: Custom Army 35% Barbarian, 65% Archer, 6 Giants, 4 Wall Breakers
Attack: All Sides
Trophy Range: 800-1200
Max TH Level: 8

TH1-5
Spoiler ([Click to View](#))

Below TH5, you honestly shouldn't be botting. Not only does the bot sometimes have issues with villages lower than 5, it simply moves so fast and botting your loot will save you very little time, with such a small loot pool to begin with.

IF however you insist, use something similar to these settings. Tinker with them a bit.

Search: Deadbase and Livebase, 80k Gold + Elixir
Troops: Custom Army 60% Archer 40% Barbarian
Attack: All Sides
Trophy Range: 500-900
Max TH Level: 6

4. Multi-Account / VM Botting

To run multiple accounts at the same time on one PC, you can create virtual machines, install all the necessary software and framework, and bot to your hearts content.

Prerequisites

1. A decent PC free of performance issues, and at least 2 GB of free RAM per VM.
2. Know how to install an operating system
3. Know how to install the bot (See above)
4. VMware Workstation [\[Download\]](#)
5. Bluestacks (See above)
6. Microsoft Visual C++ 2010 [\(see above\)](#)
7. Dot Net Framework [\(see above\)](#)
8. Un-altered Bot .zip (Re-download and make a copy)

Step 1.

Install VMware, and set up your first virtual machine, with these settings.

OS: Tiny7 (the OS you downloaded)

Hard Disk: 20GB

Memory: 2GB

Network Adapter: NAT

CPU: 1 or 2 cores

Graphics: 1GB

Step 2.

When the VM launches it will allow you to finish installing Windows 7.

Right click on the VM desktop and change resolution to 1440x900.

Step 3.

Install software to VM.

Drag and drop the install files for all your software, and install...

-VMware Tools FIRST (Menu > VM > Install VMware Tools)

-Bluestacks

-Dot Net Framework

-Visual C++

-Copy bot folder

-Run .bat to set Bluestacks resolution

-Install Clash of Clans on Bluestacks

-Launch and run the bot

That's it!

Rinse and repeat, for as many VMs as your PC can safely handle.

3. Profit

This one is as simple as can be. People buy Clash accounts pretty frequently. Keep an eye on the markets here and elsewhere to judge the value of accounts, then watch for deals where people are getting rid of them for cheap, and buy up, bot to max level, and turn it for a pretty high profit. Margin is very good if you never spend gems, and run it on a PC that is already in use (ie; no MAJOR extra electricity cost)

On Hack Forums, the places I see accounts sold most frequently are...

[Secondary Sellers Market](#)

[Member Auctions](#)

[Online Accounts](#)

[Virtual Game Items](#)

Obviously these are not all the RIGHT sections for Clash accounts, but they do pop up there. Another website that accounts are sold on is Player Auctions [\[LINK\]](#)

Accounts typically are sold at higher amounts there, however be careful as scamming and account stealing is just as prevalent there as on HF.

Thank you for taking the time to browse this tutorial, brought to you by Specialists!

If you have any further questions regarding Clash of Clans botting, feel free to post them on the thread, and either I or other knowledgeable members will get back to you as soon as possible with the answer! Happy Clashing!

Thanks to Nex+ for postholding. ?

Nex+ - January 14, 2016, 9:50 pm

Very nice tutorial you written here. Very Detailed

Kuso - January 14, 2016, 9:50 pm

I already have it installed. I'll look forward to your configurations. Thanks though. It was well explained.

Edit: when I me at config, I meant the setup and results. Pretty terrible with the recent clash update. I tried those trophy settings for th10 before too, but I don't get the same numbers you are saying I can get.

Phreakdaline - January 14, 2016, 9:54 pm

Haha yeah. I know they're struggling much except for war because they gave 9 freeze I think? Anyhow there's a soon to be new update coming with something called loot crate. This will actually

inject loot into the economy.

Thanks bud. Yeah same team I believe.

Mad76e - January 26, 2016, 3:53 pm

Thanks! This guide helped me much.. Good work man

Kosmos - January 26, 2016, 3:57 pm

I use this same bot myself. I'd recommend that you update the links to 5.1.3 and talk about the mods for it as well, such as DEZap and Four Fingers.

Phreakdeline - January 26, 2016, 4:03 pm

(Jan 26, 2016 04:57 PM)Auxxygen Wrote: [\[CITE\]](#) I use this same bot myself. I'd recommend that you update the links to 5.1.3 and talk about the mods for it as well, such as DEZap and Four Fingers.

Yep getting the links to update for the new version now. I'll also include info on the scripts attack tab as well.

Lakai - January 26, 2016, 7:06 pm

Dope as fuck, helped me set up a dope ass config, was wondering if you knew anything about

Private servers? If you do can you pm me private server ip's that work after the th11 update(and today's ig). Back to topic, this is a really successful guide and helped me fix my problems with the bot. Nice!

OverSight - January 27, 2016, 11:29 am

Is it still possible to bot with this if I'm on ios? Thinking of just using "link" device.

The Last of Us - January 27, 2016, 1:17 pm

Great tutorial!

This will help a lot of people.

(Jan 26, 2016 08:06 PM)15kg Wrote: [\[CITE\]](#) Dope as fuck, helped me set up a dope ass config, was wondering if you knew anything about Private servers? If you do can you pm me private server ip's that work after the th11 update(and today's ig). Back to topic, this is a really successful guide and helped me fix my problems with the bot. Nice!

Glad it helped you out man! I don't know anything about private servers honestly, never bothered with em. ?

(Jan 27, 2016 12:29 PM)OverSight Wrote: [\[CITE\]](#) Is it still possible to bot with this if I'm on ios? Thinking of just using "link" device.

That's what I do, just link device with Bluestacks and you can play on both. On my main account I bot with Bluestacks, and when it's off I play on my iPhone.

(Jan 27, 2016 02:17 PM)The Last of Us Wrote: [\[CITE\]](#) Great tutorial!

This will help a lot of people.

Thanks man. ?

Updated thread with links to the latest version, 5.1.4. Both the official forum post, and a mirror link.

When updating, please make sure to remove the old bot config files and start fresh. Also close your bluestacks and shut down any bluestacks process before running the new bot.

I just can't register at that website, the confirmation email never arrives!

What is wrong?!?

Phreakdaine - January 31, 2016, 2:27 pm

I have never had that issue, but I have heard the same thing from a few members before. My only advice there would be to either A) try registering from a different email, or B) just download directly from the mirror I uploaded in the OP.

Gorilla - February 7, 2016, 10:50 am

Very helpful and detailed guide, good job to this user.

Sgt.Hippo - February 11, 2016, 11:53 pm

For me the superuser installer is corrupt. Do you even need superuser for botting? At least didn't

need one before.

Culture - February 12, 2016, 7:00 am

Really nice tutorial. thank you! :)

orderxdisorder - February 13, 2016, 5:56 pm

amazing guide thanks its very helpful

Luke - February 14, 2016, 1:30 pm

Sick guide! been thinking of getting back into CoC since the new update sort of threw me off a little.

illuminati? - February 14, 2016, 7:52 pm

Great guide.

this will help a lot of new players that want to try using a bot!

?lack Hat™ - February 14, 2016, 11:51 pm

It's usually because they're updating the website they shutdown registering, or working on the website. Mostly security wise. You usually just have to wait a day or more sometimes. If it still doesn't work then find a direct download like he said he uploaded one on here. When we first had a security breach we no-one could join the website for a week/

Thrift - February 18, 2016, 7:01 pm

Replying to use these methods for later town halls.

Hats off to the detailed guide ?

Thanks man, hope it helps you out. I'm working on some more presets to try, as things change pretty frequently, and one setting might work for a while, and not work another day. ?? Nature of the game I guess.

w?????illiam???? - February 21, 2016, 11:19 am

Seems like a really nice guide. :) Good job man!

Thank you for letting me know. ?

Now it works like a charm, thanks to Phreakdaline for giving us such a detailed guide that even I could understand without looking twice!

O t t o - February 28, 2016, 4:18 am

This is very helpful, Thanks OP!

Gerymc - February 28, 2016, 5:02 am

thanks for the tutorial :)

Connectionsd - March 5, 2016, 3:49 pm

I am having issues it's saying my graphics card isn't good enough, Anyone having the same issue?

escucho - March 14, 2016, 5:00 am

very nice tutorial, nice job bro.

nosduh140 - April 16, 2016, 1:39 pm

Amazing guide dude, very easy to follow and well written!

Prince of all Saiyans - April 21, 2016, 3:59 am

Thnx so much for this thread will give it a go!

Milkcarton - May 9, 2016, 10:53 am

Thanks for this, super helpful :)

shahwahababdul - May 12, 2016, 10:48 am

thank you so much for the tutorial and your time you used to right all this i will surely try this everything downloaded and installed will try when i get free

ArcherQueen1 - May 22, 2016, 6:16 am

Hi,

I'm ArcherQueen and I'm managing Clashfarmer bot official forum and I'm one of the bot original developers.

This tutorial is helpful indeed, but all other information about Clashfarmer bot is false and complete lies spread by Mybot purely to advertise their bot.

So, lets state the real facts:

- 1 - Clashfarmer is written in Python (Most advanced programming language for automation, recognition and artificial intelligence / machine learning), and not in AutoIT like Mybot and many viruses does. So, how can it be even logical and possible that Clashfarmer stole, Mybot code?!?!?
- 2 - Bluestacks can be minimized and screen can be turned off with Clashfarmer and not with Mybot. It can very easily tested by downloading the bot and minimizing windows and see which bot continues to work.
- 3 - Mybot is only half open source even though they say it fully open source.

So, Mybot please don't underestimate Hackforums community intelligence and let them know all the REAL FACTS, when choosing their Clash of Clans bot!

Prince™ - May 23, 2016, 8:10 am

One question.

Is this bot detectable by CoC? Will you get banned for using this?

Guy. - May 25, 2016, 3:55 am

SIM-3022874 - May 28, 2016, 8:07 am

Thanks a lot this really helped me! i make 7-8 million a day but unfortunate the update is patched.. :/

If some people are having problems using the bot after the recent update check out ([here](#)) for a hotfix.

(May 28, 2016 08:17 AM)Squa Wrote: [CITE](#) If some people are having problems using the bot after the recent update check out ([here](#)) for a hotfix.

I would agree about not underestimating the intelligence of HF users, which is why your tactics of always making new users to spam a shitty copy of the bot really will not be effective, and I would advise that you stop.

So, this one is a bit complicated. Firstly, the bot does NOT affect or change any game files at all, making it NOT detectable in that manner. The bot functions solely by automating mouse movements and clicks, which function exactly as if a real user were clicking. However, that being said there is always SOME risk when using 3rd party software, as botting is against SuperCell terms of service. There are many features of the bot that you can customize to make your in game actions look more human like, which should definitely be used to reduce risk. But there is ALWAYS risk, and you have to accept some level of risk to bot. If you have any more specific questions about it feel free to ask.

They just released the latest version MY Bot that's fully compatible with the May Update, MyBot 6.1.2.1.

*Add turkish language translation by @LadyBluee

- *Improved donate castle clan dark spell
- *Fixed open donate chat
- *Improved recognitions troops & spells train & donate window
- *Fix PushBullet "Delete all Msg now" button
- *Fix and Update Laboratory Upgrade feature for new troops & spells (Missing new icons, to be added later)
- *Add French language translation by @Boju (Missing some translate, to be added later)
- *Fix Wrong donation first troop when troop to donate do not fit in castle
- *Add button open strategy folder
- *Add persian language translation by Raad and Ali Faraji
- *Fix create dark spells

You can download it here: ([Click here](#))

Any reported bans thus far with the new rules Supercell implemented?

hoooooooooooooooooooooooooooo - June 7, 2016, 4:11 pm

(Jun 7, 2016 01:03 PM)Genuine Wrote: [\[CITE\]](#) Any reported bans thus far with the new rules Supercell implemented?

Me and some friends have been using the bot on multiple accounts and none of mine or my friends accounts have been banned yet.

I think they only ban you if you make it look really suspicious.

Phreakdaine - June 9, 2016, 3:16 pm

(Jun 7, 2016 01:03 PM)Genuine Wrote: [\[CITE\]](#) Any reported bans thus far with the new rules Supercell implemented?

Plenty of bans rolling out for things like Xmod etc, but I have yet to see any from proper use of this bot. No guarantees of course, especially since nobody really knows what all they're looking at to determine whether people are "cheating" or not, but if you use smart human-like settings you should be ok. I still have 8 bots running all the time (only during awake hours) and haven't seen any action taken. We'll see though.

Also I'll be doing an update for this guide since it's pretty out of date. Haven't been around HF in a while, so it's fallen back a bit. Most of the principals still apply, but versions etc are old.
