Thread: [Don't buy these bull shit stressers in the marketplace *ALL NEW USERS READ*](#)

Loser Douche Bag #35 - January 10, 2016, 7:27 pm

Hi, I have sold stressers in the past, have been in partnerships with many stressers including big ones. Now all I'm tryna say don't buy any of this shit.

Back when I use to sell them/work with them sources were much more simpler with many using modifications of jeejee (most stressers if not all are all just modified themes of previous sources).

Now back in the good old days before these API and hippy things we had these things called shells back then HF was filled with stressers with shells from pastebin and so.

But the same shit really does still occur. and now here is a list.

1. they lie about there power, idgaf fuck there dstat says they over exaggerate
2. bull shit attack methods claiming fucking over 50+ different attack methods while most of them are unnecessary seriously. simple fucking udp/syn/http just do as good. trust me, these attack methods aren't special and really don't change up much.
3. if you are only planning on ddosing via gaming, like home connections, people go buy yourself a VPS, install a perl dos script on it and use that to attack. it works well, and can usually take down ANYONE (well the VPS I use to have) you can either hack them, buy them from somewhere (I use to purchase from a source that didn't check bandwidth or data use) and believe me this shit just works as well. or even make a irc with unrealircd, and install kaiten/linux bots on them. it doesn't take a genius to do shit like this. learning how to use a 0day exploit or any kind of exploit that allows you to get linux bots doesn't take a genius and I'm sure there are tutorials out on this shit. making a irc channel is easy. you can be a total skid and do this. it is very very easy.
4. make a irc, buy athena or shit use arian and use BOTS to attack websites. tbh one of my favorite methods of attacking websites never used actual servers i always used regular good old bots and they were efficient. shit even go old school and get XR host booter 4.2 cracked or some shit and it is one of my favorite clients to use to attack websites which works a lot better.

conclusion: you can attack websites/people with far less resources and cheaper.

lets go back to 2011 HF with the shell booters and "putty booters" come on now m8. fuck these stressers

Alex™ - January 10, 2016, 9:06 pm

Retarded thread is retarded.

Quote:learning how to use a 0day exploit or any kind of exploit that allows you to get linux bots doesn't take a genius and I'm sure there are tutorials out on this shit.

^lol

Nex+ - January 10, 2016, 9:24 pm

ey Athena, I used to own that

#Skyline - January 10, 2016, 9:25 pm

I'm not sure if this is a community alert, or OP is trolling.

Because all your reasons are funny.

XeX Menu - January 10, 2016, 9:29 pm

I remember having XR host booter, putty servers, and IRC bots. The good old days ahh...

Xepher The Cat - January 10, 2016, 9:32 pm

Isn't this like a starter for anyone that's buying a stresser? Plus most VPS will suspend you for DDOSing.

Mommy???????????? - January 10, 2016, 9:39 pm

OP, just let the skids be skids. Let them do them.

Loser Douche Bag #35 - January 10, 2016, 11:43 pm

(Jan 10, 2016 10:06 PM)Alex™ Wrote: [\[CITE\]](#) Retarded thread is retarded.

^lol

how is that quote or this thread in general retarded?
come on buddy boy, go back to selling your shit vps.

(Jan 10, 2016 10:25 PM)#Skyline? Wrote: [\[CITE\]](#) I'm not sure if this is a community alert, or OP is trolling.

Because all your reasons are funny.

how are they funny m8? i say how it is, just simple shit. and I thought #skyline from legion was perma banned or is this a different skyline?

Apple J4ck. - January 11, 2016, 1:59 am

Quote:I have sold stressers in the past, have been in partnerships with many stressers including big ones

"buy yourself a VPS"

I don't know who's the idiot that let you work for him but that makes you and him both retarded.

Quote:most stressers if not all are all just modified themes of previous sources

that's not necessarily true, vDos for example is coded from scratch.

Quote:1. they lie about there power, idgaf fuck there dstat says they over exaggerate

I actually agree with that, but yet again that doesn't include all of them, assuming there's a graph along with the statement then it should be fine.

Quote:simple fucking udp/syn/http just do as good. trust me, these attack methods aren't special and really don't change up much.

That's not true at all actually, first of all there are a lot of attack methods with different amp vectors that affect servers differently, it's true some stressers claim to have like 20 attack methods when in reality they only offer like 5 but if they're offering several attack methods it's probably for the customers, the more methods the better and customers should be thankful for it, also, by syn you meant tcp in general? because syn is just a tcp flag which is just the most commonly used for DDoS but that doesn't mean anything.

Quote:4. make a irc, buy athena or shit use aryan and use BOTS

You say that yet you probably never reached managed to set one up, let alone get bots. ?

uDes - January 11, 2016, 2:02 am

(Jan 10, 2016 10:24 PM)Nex+ Wrote: [\[CITE\]](#) ey Athena, I used to own that

Yeah it was broken before you owned it, and still is. One of the shittiest bots on hackforums. ?

Kumara - January 11, 2016, 2:02 am

Apple J4ck went IN ON THE KID.

GG.

@OP, you have a shitty closed mind.

Something tells me you've bought many bad booters before.

21st Century Schizoid Man - January 11, 2016, 2:03 am

Can someone put a community alert about this "community alert"? My eyes are bleeding, I wont see my children cause of this thread, THANKS OP

B FOR BADASS - January 11, 2016, 2:06 am

A long thread with some good explanation. Thx

IanConnor - January 11, 2016, 2:11 am

This is true i guess but i mean it hf is filled with stresers. They are not as scamming as they used to be back in like 2011/12 ish lol. and if someone is buying a stresser 90% of them are hitting home connections maybe a site with no protections so i mean the stresser will get it done

Orgy - January 11, 2016, 5:25 am

(Jan 11, 2016 02:59 AM)Apple J4ck. Wrote: [\[CITE\]](#) also, by syn you meant tcp in general? because syn is just a tcp flag which is just the most commonly used for DDoS but that doesn't mean anything. Oh dear I hope you're joking

FaberCastell - January 11, 2016, 5:44 am

I think buying a stresser is still the cheapest option. You save yourself time and money.

Loser Douche Bag #35 - January 11, 2016, 11:40 am

(Jan 11, 2016 02:59 AM)Apple J4ck. Wrote: [\[CITE\]](#) "buy yourself a VPS"

You say that yet you probably never reached managed to set one up, let alone get bots. ?

"by syn you meant tcp in general? because syn is just a tcp flag which is just the most commonly used for DDoS but that doesn't mean anything."

Everything you just said is irrelevant for saying such a skiddish mother fucking thing, go kill yourself now. Are you being serious or are you just a clueless fuck boy who thinks he knows what he is talking about?

vDos isn't coded from scratch. So me using the term "buy yourself a vps" makes me retarded? How so? I am talking about basic shit here with new members can understand, it's called buying a fucking vps and adding a perl dos script on it to send out attacks to home connections. very very SIMPLE and efficient for home connections just regular ddos for gaming. what the fuck is so retarded about this?

And now you say I never setup a bot? example arian? oh yeah for sure, I never set up a irc bot

ever since installing unreal and adding your irc info to create a aryan bot is so fucking difficult! only a true blackhat hacker can do such a hard and difficult task.

honestly you make me wanna throw up, now stfu and go back to your tcp flag ddos flying magical squirrels attack.

"

(Jan 11, 2016 03:02 AM)?SwagDaddy Wrote: [\[CITE\]](#) Apple J4ck went IN ON THE KID.

GG.

@OP, you have a shitty closed mind.

Something tells me you've bought many bad booters before.

1. apple j4ck went in on me? What the fuck does that mean swagautismdaddy?
2. GG? Good game? This isn't a game you moron.
3. How do I have a shitty closed mind? You support these fucking stressers?
4. I never bought a stresser.....like NEVER.

Zexo - January 11, 2016, 11:43 am

Apple Jacks has mad power lol he Dosent fake.

G*59 - January 11, 2016, 2:09 pm

A lot of stuff being sold here is shitty and/or reused. This thread probably won't make a difference since skids are always gonna want the easiest way to DDOS someone even if it means getting their parents card. Its the way it is and the way it will stay bruh.

JustAPrankBro - January 11, 2016, 2:19 pm

I guess I just like web booters because of the accessibility. I can use them from my phone, with a VPS you have to be on a computer

LilDurk - January 11, 2016, 2:42 pm

4. I never bought a stresser.....like NEVER.

He went hard on the paint, nigga.

It isn't a game, when you're losing.

Closed mind? You mean giving an opinion on a thread reviewing something you've never purchased? Lol.

(Jan 11, 2016 02:59 AM)Apple J4ck. Wrote: [\[CITE\]](#) because syn is just a tcp flag which is just the most commonly used for DDoS but that doesn't mean anything.

Syn is basically the entire basis of the flood. It utilizes the TCP, by sending an incomplete/half open request. It's called a syn flood rather than a TCP flood, because the basis of the flood is by sending several synchronization requests without acknowledging any requests in the handshake.

(Jan 10, 2016 08:27 PM)Putrid Wrote: [\[CITE\]](#) 1. they lie about there power, idgaf fuck there dstat says they over exaggerate

I made a thread for that exact reason. You can find some accurate reads from actual customers.

(Jan 10, 2016 08:27 PM)Putrid Wrote: [\[CITE\]](#) 2. bull shit attack methods claiming fucking over 50+ different attack methods while most of them are unnecessary seriously. simple fucking udp/syn/http just do as good. trust me, these attack methods aren't special and really don't change up much.

It's a business tactic. If they see something that is tailor made for a specific function, people are more likely to purchase it simply to accomplish that one task. Say skype-cloud for example. Old method that utilized skype resolvers and hit users offline no matter how many times they changed their ips. Obviously it's not necessary, but just as any old method - it has its own market niche.

(Jan 10, 2016 08:27 PM)Putrid Wrote: [\[CITE\]](#) 3. if you are only planning on ddosing via gaming, like home connections, people go buy yourself a VPS, install a perl dos script on it and use that to attack. it works well, and can usually take down ANYONE (well the VPS I use to have) you can

I don't think you understand what "via" means. Secondly, majority of hackforums won't know how to setup a linux vps, write scripts, scan for lists, as well as find a provider that doesn't suspend when they notice a high bandwidth flood. The whole point of the market is that users are lazy, limited on time, and want a product that works. Based on my thread, I can say at least 95% of all stressers do accommodate those 3 criteria.

(Jan 10, 2016 08:27 PM)Putrid Wrote: [\[CITE\]](#) 4. make a irc, buy athena or shit use aryan and use BOTS to attack websites. tbh one of my favorite methods of attacking websites never used actual servers i always used regular good old bots and they were efficient. shit even go old school and get XR host booter 4.2 cracked or some shit and it is one of my favorite clients to use to attack websites which works a lot better.

Price is a factor, time is a factor, and the average skill of a hackforums member is generally more than lacking.

(Jan 10, 2016 08:27 PM)Putrid Wrote: [\[CITE\]](#) conclusion: you can attack websites/people with far less resources and cheaper.

lets go back to 2011 HF with the shell booters and "putty booters" come on now m8. fuck these stressers

I've seen more stresser owners struggle harder than you will ever imagine just to find a decent provider that can accommodate a large amount of bandwidth, as well as scan lists, and code decent scripts. You really mustn't forget this is a marketplace. This isn't a place for people to create non-profitting projects. Of course you're going to find a cheaper source of power, but the compromise you're taking by purchasing a stresser includes scanning, network maintenance, the setup time, and finding a decent source of power.
