sabrinmekhail - January 11, 2016, 10:32 am

So new thread now opened of a good old brilliant crypter been using it since months AWESOME PRODUCT ???

Royal ! - January 11, 2016, 10:34 am

[size=medium][color=#FFD700][b]Customer database has been Cleaned up, completely purged & deleted, as we usually do after every 4-5 months. This is done to prevent abusers, jealous competitors, and some other black sheeps which get the chance to use

No one loses his/her license though. Whoever is already a customer feel free to contact me and I will provide you with the new version . Those who cannot contact me by private messaging they can contact me

Benevolent - *January 11, 2016, 10:35 am*

good luck with new thread royal amazing guy and amazing crypter

Vouch for this crypter.

It's really funny how competitors down vote this thread, if you're interested in buying this crypter, i can tell you this is the best you can get on HF, just read vouches on all byte crypter threads.

labros7 - January 13, 2016, 1:52 pm

The best crypter from all hackforum.

FUD 100% & i guarantee you that support is full immediately.

it worth the purchase

Scantime is fud, but what about runtime ? Please share your experience

101% - January 14, 2016, 2:10 am

After many years, Byte Crypter is still kicking a**es and busting balls!

If you're serious about file protection/encryption/security and you don't have this crypter all I can say is I'm sorry for you.

I've used a couple of crypters on HF and I can categorically say this one is the best so far. And when you consider the prompt updates and friendly/consistent support, what more could you ask for?

Don't hesitate.. Buy it NOW, thank me later!

pepermint - January 14, 2016, 1:50 pm

Be really careful with this seller, i bought lifetime licence and he is not gonna give it to me beacuse i told to everyone the true, this crypter not allowed for rats, botnets and i really was waste my money.
If you want to just crypt paint images, then you can buy it.

I'm always legit buyer, you can see that in my reputation.. there is just 2 negatives, one from scammer KingTut and from this seller Royal.

Mike Hawkinya - January 14, 2016, 4:34 pm

This product has been nothing but awesome. I have a lifetime license and it continues to deliver. This product comes with great support, as long as you can follow instructions and read. I would gladly continue to contribute to your services as long as you want me as a customer. Thank you Royal!

As you asked before. You asked "Can byte crypter be used to crypt pony". I told you NO that is not Allowed. As it is mentioned on sales thread first page as well, it is not allowed to use byte crypter to crypt financial fraud tools like zeus, betabot, pony, etc.

If, however, you Do not intend to crypt pony with byte crypter then sure, you can purchase Byte Crypter.

If you want to purchase with Bitcoins you can use the bitcoin auto buy located on sales thread first page. If you want to pay with perfectmoney then let me know I will Private message you :)

Diamondero - January 30, 2016, 2:18 am

Vouch. I bought this Crypter a long time ago. So it's not empty review like I've just bought it and used twice and I know it's greatest thing ever. To be honest I can't compare this with any other paid crypters, cause ByteCrypter is great tool and I don't need anything else. A lot of updates make it FUD almost all the time. A lot of features is a big advantage, everyone find something for his purposes. I'm using it with NanoCore and it works perfectly. If you're nooby in crypting it's the best choice, cause Royal provides video tutorials (step by step) how to use his tool. Support is great thing too, everytime when I've got problem Royal is there for me, and he helps with pleasure. Remember, buying a ByteCrypter it's not a waste of money, trust me ;-)

Iv had to buy another 3 month licence aswell as a backup incase any of my licences become nulled again -.-

Edit -

I don't even know the rar file password -.-

CyberError - February 5, 2016, 7:42 am

does it work with LL ? and whats the last detection result ?

s5011 - February 5, 2016, 8:10 am

LL + ByteCrypt setting pls

xstroke - February 5, 2016, 9:52 am

i purchased a life time for 60\$ but the serial for the rar file is wrong. please contact me as soon as possible.

NERO - February 5, 2016, 9:54 am

The serial isn't for the rar file, The rar file password is different.

I too do not know the rar password,

When you do have the password - Extract the contents,
You should navigate through the subfolders taking care to read all the user information and watching the video provided.

Once you have done that start Byte Crypter and you will be greeted by a login screen,

Register a new user and remember both your username and password.

Once this has been done make sure you login.

Once you are logged in click on redeem serial and enter your serial code there, This will activate your membership and your account will be active.

The payment you made for Byte Crypter WAS chargedback. And hence your account from Crypter was Banned. So you obviously shouldn't expect any reply from me.

The best crypter on hack forums, I am a member of its services since 2013, best support ever!!

? ?

NERO - February 16, 2016, 10:33 pm

Hi royal, In regards to the PM, Once my friend had finished the checkout he was sent an email with a download link and a serial, There was no mention of a rar password?

This license was only a backup since my lifetime license was revoked during the database purge,
So i essential own 2 licenses, Also ill have to grab the email used for the paypal an give it to you on thursday (My friend's in dubai and will be back then)

Sorry for the hassle and thanks again!

baazouzia411 - February 18, 2016, 1:55 am

Why the heck are you spamming the Sales thread for again and again dude?. I never leave my customers in Blank and always do provide customer support regarding Crypter. Already like two days back, I sent you my direct contact details and you can add me over there and I will be more then happy to resolve any of your issue. But even after reading that message of mine, you did not add me over there so how do you expect me to provide you customer support when you are not even getting in contact with me?. Posting on sale thread won't give you any auto-fix to whatsoever

issue you have.

Kindly move on and add me on the direct contact I gave you like two days back.

Thank you.

Thanks for the update. He has a right to exist. works great

DrinkVodka - March 13, 2016, 10:46 am

Hello guys. I have a quick question, im currently using luminosity link as my RAT and im wondering if its better to select installation from inside the crypter and disable it in luminosity or enable it in luminosity and disable in crypter.

Im not sure which one to choose as the crypter has more options in the install but the RAT says to use its setting.

Thanks for any replies

Product is licensed and hwid protected. If you try it open it on more than two different
Machines/Device then it will get locked. Also if you use more than 35 different IP addresses to
access the program then it will get locked as well.

You was at first banned for violation of T.O.S. Then as you made the apology I un-banned your account. But later on it got auto-locked because of licensing server updates. I was about to unlock your account but have seen you created a chargeback on the payment you made for it. So its all end for you now. If you care to resolve this for yourself in future then close the dispute which you opened and I will be happy to resolve your concern.

If any Byte Crypter customer is facing any kind of issue Regarding crypter then the proper way of getting that issue resolved is to contact me directly either by private messaging, or by my direct contact details(Messenger). If you are going to just post over here and then go offline for weeks, you shouldn't expect any help from me in that case. How do you even expect me to help you and solve your issue you having when you do not even contact me and just spam on sale thread?.

I replied Back to all the Private Messages sent to me. If any Customer faces any kind of issue regarding Crypter then feel free to Contact me.

I would have to say the best crypter on hackforums today. Huge Vouch for Royals products and his customer support. I had a problem and he got back to me super quick this week. (Excellent customer service is sometimes just as important as the product your selling and I can safely say Ive had owners of productions talk to me as if i'm an idiot for asking a question.. won't name any names. haha)

Can't download the latest update, can you pm me the latest update please? thanks.
First of all, the FUD updates are automatically released. You don't have to "download" fud updates. Only new version updates require manual download. The FUD update I released yesterday, just open the crypter and it will download the fud update silently and automatically.

Secondly, I am unable to PM you as well because you can receive PM's only from those people who are on your buddy list, as per YOUR OWN settings from your USER CP. Go fix it.

No, I don't think so.

Almost every crypter doesn't allow that.

(I can't tell you for sure about this one though).

ok thx and maybe you can help me for a problem

when i build and obfuscate my rat, I scan the file with the crypter and the result it's 5/33.

I have put an other icon and clone with an other file.

scan4you.net/result.php?id=83654_io38bf

the config is the same than in the video

how i can take off the "Gen:Variant.MSILPerseus.40721"

(sorry for my english, i'm french)

You could try to remove the assembly (you could do this with ResourceHacker)

Or you could look up a "HQ" icon.

Gen detections are easily removed by those things.

Otherwise you could try to duplicate the assembly of an well known application so it doesn't look suspicious.

Good luck.

Have a nice day. ?

after crypting it just doesn't work click on the file nothing happend

zeroedvantage - August 8, 2016, 3:35 am

Hey royal. I am very interested in this crypter. I cannot message you do to not enough posts. I would be more than happy to buy this crypter in a week. I was curious if I could have your contact info so I can contact you once I get my pay check. I also have questions about this crypter as well. If nanocore is functional on this crypter and if it still stays FUD for more than 3 weeks before it updates like you said on the sales thread. For how this crypter looks, I'm very impressed and more than happy to do business with you. -Thank you for your time. sincerely Azrael

is this a native c++ or a .net crypter?

ss_y3ll0w - August 14, 2016, 9:09 am

Some Questions:

1. What types of programs can I NOT Crypt?
2. Is the FUD for Runtime, Scantime, or both?
3. How long does the program stay FUD?

marcoscho1234 - August 14, 2016, 10:55 am

nice crypter, its 100% FUD ! :)

Best on the Market :P

Awesome Crypter, best support. Are you in search of a Crypter and you are not sure which one to

get? You are in the right thread.

ByteCrypter is the bustop!

I bought the lifetime and I am happy I did, because I have no reason to go for another Crypter.

Kudos Royal!

You are royal indeed.

I would say, READ THE FILES;

"Crypted/Protected files/file sizes are DIFFERENT/Randomized Everytime you crypt So if upon first crypting you get any false postive/detection issue then Crypt it again and you will see the things Different and Changed !"

It is within the folder you num num ?

1. If i will buy program, how many time i must wait to get ? Ofc paypal
2. How much time the program is FUD ?
3. The program will work with the luminosity link (RAT) ?
4. The program has protection against : VM, Sand box, malwr ?
5. Program work on WIN 10 x64 ?

sry for my bad ENG.

marianolaciar - September 4, 2016, 8:58 pm

Hi royal I have a problem with crypter and I can not solve.

crypter is very good but I have a problem with the process, i did use "custom process name" and it didn't change it even after restart

But still after restart the process could be seen on taskmanager with again with a random name like Aqhhhsdsne.exe

searching the forum I found another having the same problem I followed the instructions but the problem persists.

i send a message to your email to help me solve the problem, I would have liked to send you pm here but I dont have 25 post.

Srry for my bad english ;(

Rufflenator - September 4, 2016, 11:44 pm

Hi,

I'm having problems with using LuminosityLink with this crypter.

It works perfectly fine, up until the point of crypting it with the Obfuscator. Straight after that point the file executes itself and the binded file, but does not connect to my client.

Thanks

It would be preferable if you could PM me as I have some issues to sort out. Mainly to do with the binding of files.

Thanks

I wanna buy the byte crypter lifetime edition. IS BYTECRYPTRT V3 compatible with VB, VB.NET, C, C++? And as the version goes up, can also use the version up since I buy the lifetime edition? I mean that your crypter's version goes up (3->4).

My tool is quite unique that when you crypt, you should change the kernel setting. I heard that if you change the kernel wrong, the program will not be executed. So I wanna know your program supports all the program, even the kernel things..

And I dont want the crypter's service ends. In the case of div*rse crylter, when I bought it, the service ended. And I couldnt get the refund.

Thank you. And iexpect your fast reply.?

Hi,

I was unable to send PM to you due to my account being new and I don't have bitcoin wallet (it said to upgrade on the site I have to pay using bitcoin - some country restriction - even though i was able to purchase the crypter using paypal - it would be a good idea to allow members to upgrade their accounts using paypal i use it all the time and it is safe)

I just purchased the bytencrypter and in the documents it requests that I contact you to activate it or it will stop working within 24 hours.

the email used was romamafia@yahoo.com

Thank you.

You made the Payment by Bitcoin. So your payment will obviously be considered as "Complete" after at-least 1 confirmation on the bitcoin blockchain network.

Anyhow, it has now been completed and you already received the product.

DarkyLight - October 10, 2016, 5:41 pm

Hello im getting a fucking headache ht tps:// scan .majyx
.net/scans/result/68a66b21c3920fa5396637d413031d7e857f5bef (delete spaces)

im using IMonitor4.5 with almost all option off. i put injection with relocs, startup/install and security kit inject to dwm.exe; delay execution 10 secs, i crypt. then obfuscate with smart assembly (tried confuser too)

But im getting a headache trying to blow those false positive/Gen.whatever. Mother of god i tried everything, my icon is not the fault, it was 300x300 i created an icon with multiple sizes (8 or so) and injectd on IMonitor stub with ByteCrypter. Tried deleting assembly info with reshacker or using assembly cloner on dwm.exe, tried setting lang (1033) to the assembly with reshacker... but ANYTHING works, i always get a lot of Gen. with 3 HEUR MSIL or i get a lot of detections and Gen. too.

That scan is the most "clean" one i can get. Smart Assembly problem? im doing something wrong?

WTF im doing wrong! lol

Hello,

I am new on this forum and i'm impressed about ByteCrypter :)

I would ask you, if i can use the RAT DarkComet with ByteCrypter.

Please tell me your details to buy the product via Paypal...

Thank you !!

P.S. Do you give manual how to setup the Crypter ?

Hey, I was curious to how you encrypt a C# that's combined with .net? Tried using the self inject and the .net self inject checked but doesn't work. Also tried manual image mapping cause of relocs accessibility. Also made sure of not checking anything that was already checked in the previous program/ vise versa so that the file wouldn't be corrupted. PM me of opinions, thank you.

xXDeFrAgXx - November 15, 2016, 1:00 am

This has got to be one of the best crypters out i brought the life-time package and not one regret. My ratings

Stably: 10/10 Awesome support for all RAT/KL/etc

FUD: 10/10 Best FUD crypter alot of crypters claim to be FUD but are not this is NOT one of them great work royal.

User-friendly: 8/10 a little intimidating with all the features but the video explains it all.

Support: 5/10 it is very hard for me to contact Royal as PM's are locked for me and his Skype is no where on the program. (P.S add a support TAB under news with the contacts)

Overall: 9/10 the support is the main thing but altogether very good crypter FUD for a decent amount of time.

Hey StickyNoodle, i've seen your pm, but i unfortunately cant respond to you untill i've made 25 posts.

I too, have a problem with the crypter right now, it worked fine earlier, but it now either disapears from my desktop and when i try to run it again, it says that it's being used by another program, hopefully Royal will fix it soon

2. Add the folder as exception to your Antivirus, also don't forget Windows Defender.

Hey there! Is there any possible way to work out a 1 Month option? I was going to flat out buy lifetime but now i'm realizing it'd be a big waste of money if the program ended up not meeting my expectations. I don't want to commit too much without working with it myself. 3 Months is also a bit much for me just wanting to try it out. Hope we can work something out,

Thanks.

I don't think crypters can secure your cheat. Use something like VMProtect, Themida, Safengine or Enigma Protector if you want to prevent reverse engineering. Crypters here are for bypassing antiviruses.

If i encrypt my cheat using your crypt and re-encrypt again using Enigma... can ?

And are Enigma Protector and etc encrypter too or encoder ?

Sorry to ask too much, i am new in crypt world hehe

If you are looking to bypass antiviruses, get a good crypter. My personal recommendation would be Octopus if you want long FUD time.

If you are looking to bypass cheat detection, recode your cheat and pack it with enigma.

This is my honest opinion about this product!
I vouch for this product, High quality and auto updates. firm 9.8/10

The support is one or might be the best support I've ever had on here, royal quickly replied in email/PM and is extremely friendly! 10/10

The crypter has many features and is newbie friendly and doesn't take more than 10 minutes to learn how to use. 10/10

Overall this crypter is really great! I suggest on purchasing this, you won't regret it! 10/10

please should i re-download so it could work fine,please help me

Benevolent - December 10, 2016, 1:56 am

those who get any system exception/failed to download update error you use ccleaner clean your system then re-download the most recent version of byte it will work fine

tried it and it does work after doing that.

Hey,
i paid and received immediately after receipt of the money my product.
It could easily activate everything quickly and clearly.
The tool contains a lot of functions, so far I have tried 95% of these and it works with me everything

perfectly.

The support is fast, good and friendly, could help me and I had no more problems.

Thank you for the possibility.

+++ Video tutorial(You cant do any mistakes)

Fazit:

i think it is the best crypter on the marked. I have no suggestions for improvement

Greetings, Spirita.

kevy42 - December 11, 2016, 3:47 am

Quick update guys, cant update my thread cuz i took to long(my bad).

The thing i said about the scanning being possibly "broke" or any accusations like that.. My bad.

I obv didnt think before opening my mouth. And yes the crypter is DAMN fud and the scanner works. My apologies to the owner. Also srry my spelling is shit, english is not my native language

SIM-3321467 - January 6, 2017, 10:36 am

Is it FUD on scantime with NET Files too? I'm asking it because i have exterbyte crypter now it claims to be Runtime FUD but its apparently not, they said the runtime fud only works with native files only.

KoHx33 - January 6, 2017, 11:16 am

As you said - I can ask you over here.

(@Everybody else reading this now - stfu - I'm new haha)

Is it compatible with Luminosity Link?
Are there free updates to keep it FUD? Private Stubs or something like this?
Any common Virus-test-site you prefer to scan my files?
Could you explain the different Injection Types? What does this do? (Sorry I'm new to this)
Which effect have the Startup/Install section? I'm not completely sure if I understand that (the functions) correctly.
Whats the Security Kit thingie doing?

Simple explanations are welcome. :)

&Thanks for your support. Cheers!

OK last 3 questions before i decide on getting it

1. does this target a specific build (i.e. .net, java, etc) or is any language accepted by it
2. whats the minimum time this project will exist before its dropped?
3. Is njrat considered a bank fraud tool

main reason I am asking #2 is because I plan to get lifetime, I just want to make sure they don't plan on stopping the project anytime soon.

AnthonMS - January 28, 2017, 10:43 am

Hi, I am interested in finding a well working Crypter and stumbled upon this one. But I have some questions as I can see that there is always a list of working RAT's with these crypters.

You can add me on Skype: AnthonSteiness or if possible just PM me or reply.

Will I be able to encrypt a Payload I made with for example Veil-Evasion or just msfconsole, so it's FUD? And will I be able to bind it to .pdf files, .docx files and such? And will I be able to make it persistent and run on startup?

And if anyone knows, just remembered the migration command in msfconsole, if I migrate my payload to a process that runs on startup. Will my payload run with that process on startup the next time? Or is it just so I can make sure the target won't close that specifik process?

Thanks in advance if anyone knows any of the answers.

Can someone who has used This crypter msg and explain to me some stuff? So basically I bought exterbyte and whenever I try to crypt it, it makes it so that the person opening the crypter rat doesn't show in my clients list.. I even tested it on my friend, I use LL and I sent him a naked rat with no crypt through skype and it worked like I saw him on my clients list but when I crypter it, it didn't work, is it because I'm using the wrong settings on the exter. crypter? Also if I buy this crypter (bytecrypter) can someone please message me what the best settings are and what they do please?

Can I have your skype please? I am interested in ByteCrypter, I can't send pm's thats why, and I wanna if it works for njrat aswell,
and does it bypass ESET NOD Smart Security and AVG Internet Security? (RUNTIME NOT SCAN TIME)

We can discuss it more on skype if you would like to, I would like to buy if it does work on the questions I asked

Thanks.

This is always FUD u have a unique server always BEST CRYPTER OUT THERE and ROYAL! is always at your service, i can tell u thanks to him ive got in to computers with good protection. If i knew him IRL i would kiss his feet!

c0rle0ne - February 23, 2017, 8:38 am

I am blown away. Perhaps the best customer support I've seen. I bought this crypter (lifetime) back in 2012. Last used sometimes in 2015. Today I just asked him if he can allow me to have axx. And guess what - I got my lifetime license back. Many thanks to Royal!. Awesome support.

And ofc ... just checked my first crypt. It's FUD. A great way to start the day :D

Check the video that comes with the crypter, if u follow the guide u should have FUD.. And please read "READ THIS FIRST" before you make a post.

kazbastyk - February 24, 2017, 7:57 am

I did everything in the instructions. NJRAT, Nanocore, Ozone.

In general, of course the file will be corrupted if it FUD.

XeNoNrsa - February 26, 2017, 8:41 am

Great Program works like a charm no problems at all

i encountered a weird problem, my crypter keeps on closing on its own, plz pm me your mail or skype so we can solve this.

Thank you

H4x10r - February 26, 2017, 1:14 pm

Best Of all Crypters sure the confusion sucks but at the end its most fud i have used server all Server files form nano to other bots all worked well , and the price also damm man

thanks for the great product again :-) im happy to have it save me lot of troubles also the new self updating makes it more comfortable.

the only thing i am missing is private stubs the rest ist the best

so to interessier Buyers :

DONT SHIT AROUND IF YOU WANT A GOOD CRYPTER GET THIS ONE .. AND DONT BE SILLY GET THE LIFE TIME PACK

It closes down ...thats normal see the left down site there is a auto logg out time

its some reversing and security reason stuff

H4x10r - February 27, 2017, 3:23 am

And there it goes

Love it
:)

I've just purchased it today!

Problems:

1. If I keep the program idle for couple of minutes then it shuts down and I've to reopen and start clicking all the options.
2. The option for binder is not working. Dunno where to click to find. Also, nothing in the video tutorial.
3. Reaching to the option "Crypt/Scanner"; I click "Crypt File", as per the video tutorial it should say "The file has been fully crypted" but it pops up another error window stating "An unknown error occured while crypting a file. Exception info: System.NullReferenceException. Object reference not set to an instance of an object"

mistergelio - April 23, 2017, 8:31 pm

Hi, how buy this crypter? what is the link?

c0rle0ne - April 24, 2017, 1:32 am

Second Vouch ...

for a public crypter with such cheap lifetime price, ByteCrypter is perhaps one of the most resilient products in HF. Support is awesome, you will get a kind of instantaneous response - I doubt if he ever sleep :). Crypted file size is small. And best part of it- it's FUDed almost everyday.

I would definitely recommend this product.

Altrox - April 24, 2017, 9:38 am

Just opened up my PMs, thanks in advance man.

4getme - April 24, 2017, 12:02 pm

mistergelio - April 24, 2017, 9:15 pm

Royal, this crypter allow crypt rats like spynet or darkkomet?

anonbux0 - April 25, 2017, 5:06 am

The crypter is not working, also the detect rate is high, over 11/35 . Sent you a PM , i would like a refund.

Thank you!

kingslove123 - April 25, 2017, 7:06 am

Hello Royal,

No its not for what you are trying to use it for. Your access from Byte Crypter has been permanently Revoked for violation of T.O.S mentioned on first page of this sales thread. The T.O.S really means what it states.

dude it's auto-buy but maybe i want to ask you something or talk with you or i need help ? can you please add me on skype ? live:q0rl

Hi I bought your FUD yesterday, ok it crypt it is niquel by cons I lose the connection part on the server? How to solve this problem

Urlinium - April 29, 2017, 1:09 pm

Hello Royal

i have a question .. and maybe is stupid question because i asked you it but maybe you can say the truth :) because i trust you

is your ByteCrypter is better than DataProtector ? if yes , why?

and too many people says that your crypter have 60% FUD or 70% FUD or 80% FUD the most time and in a little time have 100% FUD
is that true? why

ford5754 - April 29, 2017, 1:24 pm

I can tell you guys that hesitate 2 buy this crypter, DONT... THIS IS FAR THE BEST CRYPTER i've tried.. And i tried A LOT of them.. Royal lives up to his name, he make sure your server always stays FUD. If i knew this guy IRL i would kiss his feet.

So if u wanna buy a crypter this is the one... He always replies when i need help with something.

you get your personal settings so your server will be unique.. So it will remain FUD..

ROYAL IS FKING ROYAL!

One love for the best crypter ever coded..

I PERSONALLY VOUCH.. 10/10

hello dude, i have waited for your skype username response to tell u my issues but to no avail
am not happy with this attitude of yours meanwhile i guess here is the place you will see my issue
since u dont want to send me ur skype.

pls my crypter has not worked for me since i bought it

here is the error that is telling me each time i try crypting.
"AN unknown error occurred while crypting a file"

pls i have not used this crypter since i bought it pls take a look at my issue and get it resolved

Huge Vouch for Royal ! and ByteCrypter.

I'm using bytencrypter for years and it never disappoints. works without glitches, has frequent updates, FUD and of course, always improving!

LORD OF FULL\$ - June 8, 2017, 4:55 pm

Nice one bro i just got back my crypter today, Nice job from you bro, i really appreciate it

masonsmith - June 9, 2017, 1:13 am

This is by far the best crypter on HF. One of the good things about this crypter is that when you buy lifetime licence, it is truly lifetime. I purchased this crypter around 2014 and up till today my licence is still valid. Why waste your money on some crypters that will disappear after few months when you can buy and keep this crypter for life.

And yes, it is FUD

Hello, i'm planning on buying this tommorow (Lifetime with BTC). I would like to get some information about stub's language, how often it gets updated after getting detected and how long do you think you are going to continue this project. I'm truly sorry if any of the questions mentioned somewhere in the thread, i couldn't find it. Also, i don't have enough posts to PM somebody so how can i contact you incase something happens?

Regards // Tan

The best crypter I have used so far. I used cyberseal, it wasn't FUD and the seller didn't help me with anything after got money.
but, when I just tried to check my Byte crypter, in the first go with no icon i got 2 detections only. thats pretty good. thank you Royal!. I suggest everyone to use Byte crypter. :)

HYDR0fficial - July 2, 2017, 7:42 am
We can not connect to the crypter for the moment, What is the problem ?

Apart from that the encryption remains very good is really good;)

TH3LON3W0LF - July 2, 2017, 9:29 am
Hey Royal,
I just purchased ByteCrypter and I love the way it looks, the simplicity of it, and the fact I got FUD on the first try!
(For reference's sake and so I don't get locked out tomorrow, registered username in ByteCrypter is TH3LON3W0LF, HF is well, TH3LON3W0LF)
I was unfortunately unable to use Security Kit as it threw this error:
Code An unknown error occured while crypting a file.
Exception Info:
System.NullReferenceException: Object reference not set to an instance of an object.
at '#MYcGJ\],Sq\&J{;DXE?E%p{!|.7aTsGF\C0&c?yxZ|Z|/JS^FE"(String)
at
'#MYcG)\],Sq\&J{;DXE?E%p{!|.KdhY}%Seqxz)"s=Ub1o+K9>\+)Object, EventArgs)
The program in question has Relocs.available marked as yes, so I used Manual Image Mapping and .net Self Injection. I'm assuming since I have self injection enabled and Security Kit, it's throwing this bug, but disabling .net self injection threw the same error. I'm unsure how to proceed. Thoughts on your end?

Crypters can be a bit confusing when you first start protecting your software, but PM him or ask him to PM you for support. He will help. the crypter works just fine with NC and IM5 about 4 pc's in my office is using NC and another 6 with IM5 and nobody has cracked my projects yet so no issues, not perfect but for the price its well worth it.

i got a reply from you which a user cant expect from his seller and the reply was:

"By any chance, are you fucking retarded damn it?. The link I sent you yesterday, can you NOT SEE the CONTACT SELLER button on that fucking link?.

Use that fucking link and stop spamming on my sales thread. "

do u think u are a god? look i paid u ok? i didnt beg u for your fucking solution. but now when u choose to wipe out data of users after 6 months, my access is gone. did u even ask me if i am happy with such service? no.

and look at the way u are replying,

i did send u an email from that button 2 days ago.

but u didnt reply.

and im not interested to spam anyone. i just want my fucking crypter ? do u get that? and now stop making excuses and send me the fucking access

Multi file binder makes your .exe file run other files like pictures or other executable files along side with your main file. "Multi" means you can bind multiple files to your main file. File extension doesn't change. Hope this clears things up. Also crypter has a "Left to right" extension spoofer which would allow you to spoof your File.exe to something like Fileexe.jpg

Hello.

I've bought lifetime package ages ago, but haven't used it a lot duo my prob with my comp and moving to another location. Well now that I've finnaly made everything working prop., and wanted to run this baby, I get an error.

<https://ibb.co/cWL5SF> (just remove the .)

Did anyone have the same prob or is it just me?

Have a nice day.

I said I'd come back and give my review once I've had some experience with it and I just wanted to say to anybody considering dropping money for Byte Crypter, you won't regret it! I was shocked that such a great and reliable crypter such as BC3 was so cheap compared to the other crypters out there. Royal has been extremely quick to respond to any questions I've had so far and was very helpful. If you're in the market for a crypter that's reliable and constantly being improved in order to

remain FUD, look no further.

10/10 would purchase again in a heartbeat.

It does. ?

Native and .NET RATs work

Hi Royal again. Is that possible to bind a file which will not be injected+install+startup, but which would be started only when I start the crypted file ?

Your "Run once" feature really run once on not each time I open the file.

For example, I bind a RAT.exe + random.exe, I run the file --> My RAT is installed and running each time the PC is restarted, but the random.exe is not launched when restarting my PC. This random.exe would be run only when I execute the final binded file.

If anyone else which uses the crypter knows how to do, I'm listening :)

Thanks !

Generating - November 23, 2017, 10:50 pm

I have had ByteCrypter for a long time, but for some reason in the past 2 weeks or so, I am getting like 8-10 genetic detections. Usually that wouldn't be an issue, but I literally cannot get them to go away. I've tried countless different icons, different assembly information, pumping 2-4kb in increments, etc.

I don't know if gen detections can sometimes be the crypters fault or not, but I used to use other crypters like CyberSeal, Topher, AbyssProtect, etc, and I was always able to get rid of gen detections.

Changing options and even creating a .NET application to sideload the actual application still gives the same error.

The crypter works fine with every other application but IM5 seems to kick back this same error every time.

I have been using this crypter with IM5 for months with no errors. Since the last auto update it errors whenever it is crypted.

(Dec 2, 2017 01:29 PM)brother360 Wrote: [\[CITE\]](#) I made a purchase of bytencrypter a week ago, and paid via BTC. Emailed for an update and all, and never got a response. Looks like with all the reputation this seller has, he doesnt cover every base, and Im out the BTC with no product.

I'm hoping to get a response via this medium as all others have failed. Thanks

Thanks for the quick response back and for rectifying the situation. Cheers

A new update is released and is Auto-updated. Open up the product to receive the new update silently and automatically.

patient even if you're a noob haha)

Thanks Royals !

You give it try and you won't regret it

(Nov 29, 2017 08:04 AM)SoftButFirm Wrote: [\[CITE\]](#) I bought this a while ago, been using it off and
on (Not a problem with Byte, just didn't need anything encrypted). Lost the files and Royal was still
here to give me a license and the DL. Thanks again!

Thank you for the feedback.
