How to use TOPAZ. [Download Topaz here.](#)

[Download Irfanview here.](#)

Ok so, here is how you install and use topaz. First, you download and install Topaz and Irfanview. Once you have done both, download Irfanview [Plugin Tablet](#). You have now successfully installed everything you need in order to work with topaz.

To use it: Once you are on the step where you need to topaz it, hit: Control + Alt + Shift + E. That should merge all the layers to a new layer while still keeping the other layers. Then hit Control + A or select the whole layer. After that is complete, hit Control + C to copy the layer. Then open IrfanView and hit Control + V. That loads the image to irfanview. To get to the plugin section, hit Control + K.

See picture:

Spoiler [\(Click to View\)](#)[\[img\]http://img12.imageshack.us/img12/2350/topaztut.jpg\[/img\]](#)

Then there, it should load the topaz plugins. Only use Topaz Clean and Topaz De-noise. Just play with the settings.

More tutorials soon to come. I'll be doing like one a day.

Im guessing you will need to ask a Moderator. Or a staff member. Then they will deem it worthy enough. Send a PM to one of them.

But you put enough effort and time to make this worth the stickie.

Sorry if that question wasn't directed at me... ^-^
