Thread: [How do I send messages with 'enter' on BlueStacks?](#)

Spongepower - January 14, 2016, 11:33 am

I was watching a recent videos by Odessee (don't know if I spelt that wrong :P) and realized he didn't have to click the send message button OR the back to contact list button. He was just pressing a button on the keyboard.

How is this possible? This would save me so much time.

Granny Bacon - January 14, 2016, 11:36 am

Go to the settings in KIK app, then go to chat settings, then check the "enter to send".

Second this - It makes it much quicker.
