Thread: [Simple way to turn down \(CRASH\) any WiFi with Your smartphone \(No software needed\)](#)

kader09 - January 16, 2016, 1:08 pm

Hello dear hackers and crackers and goat lovers,

I found a way to crash the WiFi internet for everyone connected to it, using just your android phone (dunno if it gonna work on other smartphones).

NOTE: for this to work you must be connected to the WiFi too.?

1. Go to settings >WiFi >Select the one that you want to crash.
2. On the Login Popup select advanced settings.
3. You'll see IP settings : Change it from DHCP to STATIC.
4. In the field IP adress type : 192.168.1.1
5. Connect. than wait like 30sec.

This will automatically disable the net for everyone connected to it.?

shutzkopf - January 16, 2016, 1:19 pm

This actually work lol this is hilarious

BeNT- - January 16, 2016, 1:23 pm

Haven't tried this but makes sense it may work.

The ip you gave you would want to replace with the gateway Addy. Mass device packet confusion.

AliasIlias - January 16, 2016, 1:28 pm

Am going to try this out when I'm at someone else's house :devil:

w?????illiam???? - January 16, 2016, 1:30 pm

Should I try this at school? kek

SIM-2914245 - January 16, 2016, 1:31 pm

can the host un-crash it from this state? and can you just disable that by simply switching back to DHCP. i want to try it out on my own stuff but don't want to mess it up (you can tell i'm new)

I was thinking the exact same man!

DarkButBright - January 16, 2016, 1:41 pm

Does this reverse automatically or do I have to reverse it?

I wanna do it during class..

yea the host can't do sh*t ?, just switch back to dhcp to restore it.

How2Hacks - January 16, 2016, 3:55 pm

0.0 trying this out, will post edit when I'm done.

Edit:It worked LOL.

To do this on IOS , go to settings -> Wi-fi -> Click on the network your connected to settings -> Go to the static tab and put the ip address as the router ip , next copy all the info from the DHCP tab (Subnet mask, router and DNS). Wait 30 seconds and rip your network, fix your network by backspacing everything in the static tab.

A question about this, this works for me cause my home router is 192.168.1.1 , but what about when you do this on a router who's IP isn't 192.168.1.1 , do you switch your ip to the router's ip or do you still use 192.168.1.1?

fyxtro - January 17, 2016, 3:53 am

wow this really works XD can't wait to try it at school!

kader09 - January 17, 2016, 7:35 am

nah you have to use the routers ip, most router's use 192.168.1.XX sometimes 192.168.2.XX

w?????illiam???? - January 17, 2016, 7:35 am

I guess people are saying it works, LOL.

I'm doing this at school on Tuesday.

How2Hacks - January 17, 2016, 8:16 am

@kader09 Thank you, time to troll my school network.

HazedOFF - January 17, 2016, 8:23 am

This doesn't work on my ISP.

Ansipp - January 17, 2016, 10:24 am

doesnt work on android :/

Granny Bacon - January 17, 2016, 10:27 am

Gonna try this in school.

Should work because you disable DHCP which is needed because DHCP handles the IP-addresses.

Lis?hén - January 17, 2016, 10:50 am

School is like the lab test for people when it's doing about wifi or networks xD

Ps: will try it tomorrow at school 3:)

It won't allow me to send a connection request if I don't fill the full form, what do I write in the other fields ?

Supreme.tm - January 17, 2016, 11:42 am

Posting here for later. Thanks for this!

How2Hacks - January 17, 2016, 11:45 am

I'm assuming you're on iOS, copy all the info from your DHCP tab into your static tab (except the IP address, for the IP address put the router IP)

If you're on Android probably ask OP since I don't have an Android phone.

Nads - January 17, 2016, 11:47 am

Using at school tomorrow, thanks OP.

KingHarold - January 17, 2016, 12:57 pm

:D I definitely try this in my school.

Exodi - January 17, 2016, 1:05 pm

This works. You're a legend. SAVIOR
