I dont know what are u trying to do, u are fresh member on this forum u didnt read any tutorial about hacking. I am pretty sure u dont even know how to build a simple php script or install mysql, and u are trying to hack into a website. There is no tutorial for that kind of stuff, u need to lern IT!

Lol, he is correct. I mean look, to 'exploit' a website you need to know basic scripting. For example if there is an exploit under the Message table you could edit that variable. But, you would need to know the Sql injection code to do it.
